

# DETAILED CONTENTS

<i>Preface</i>	xiv
<i>Acknowledgements</i>	xvi

<b>1 A history of molecular ecology</b>	<b>1</b>
Introduction	1
An evolutionary perspective for molecular ecology	3
Systematics, phylogenetics, and the species concept	3
Variation within species	4
The origins of modern genetics	6
The modern synthesis	6
The neutral theory of molecular evolution	8
Behavioural ecology	9
Genetics in ecology	10
Ecological genetics	10
Genotype, phenotype, and phenotypic plasticity	12
What is a molecular marker?	13
Mutation mechanisms of molecular markers	15
Milestones in molecular ecology	16
Early days of molecular ecology	16
Allozyme electrophoresis	16
Restriction fragment length polymorphism	19
Minisatellite DNA fingerprinting	22
The polymerase chain reaction	24
PCR-based molecular markers	27
DNA sequencing	31
Molecular ecology today	36
Summary	39
General reading	40

<b>2 Molecular biology for ecologists</b>	<b>41</b>
Introduction	41
Nucleic acids and the common origin of life	42
The structures of DNA and RNA	43
Primary structure of nucleic acids	43
Secondary structure of nucleic acids	45
DNA replication	46

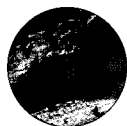

Protein structure	49
Basic immunology	52
The genetic code and gene expression	53
Genome structure: an overview	55
Non-coding DNA	58
Functional (coding) DNA	61
Ribosomal DNA	61
Nuclear structural (protein-coding) genes	62
Mitochondrial DNA	62
Chloroplast DNA	64
Plasmids and genetic manipulation in molecular ecology	65
Mutation	67
Somatic mutations	68
Germline mutations	68
DNA point mutations	69
Other types of mutation	70
Evolution and the mutation rate	71
Summary	72
General reading	73

<b>3 Molecular identification: species, individuals, and sex</b>	<b>74</b>
Introduction	74
The species question	75
Defining distinctiveness	75
Hybrids	79
Dealing with individuals	84
Basic identification	84
Competition between toads and the problem of indistinguishable larvae	84
Speeding up identification: the use of SNP-based probes	85
Identification of prey in predator guts	86
Forensic investigations	88
DNA barcoding: towards an inventory of life	89
Sex	90
Bits of individuals: non-invasive sampling	92
Molecular identification methods: an appraisal	96
Protein analysis	97
DNA analysis	97
Summary	98
Review articles	99

<b>4 Behavioural ecology</b>	<b>101</b>
Introduction	101
From monogamy to promiscuity	102
Animal mating systems	102
Use of single locus profiling	103
Determining unknown mating systems	105
Lekking	106
Sexual dimorphism and male dominance	108
Dominance hierarchies	109
Female reproductive behaviour	110
Sperm competition	111
Why is female promiscuity adaptive?	112
Mate choice and the MHC	114
Sexual conflict	116
Sex ratio biases in offspring	117
Cooperative behaviour	118
Cooperative breeding in birds	118
Social insects	119
Cheating tactics	121
Interspecific brood parasitism	121
Intraspecific brood parasitism	122
Foraging and dispersal	123
Foraging	123
Dispersal	124
Behaviourally mediated speciation	127
Summary	134
Review articles	135

<b>5 Population genetics</b>	<b>136</b>
Introduction	136
Genetic diversity in natural populations	137
Some basic concepts	137
Population size and genetic diversity	139
Mammalian examples of population size and genetic diversity estimates	143
Effective population size	146
Genetic estimators of effective population size	146

Population bottlenecks and expansions	150
The significance of population bottlenecks	150
Genetic tests for population bottlenecks	150
Founder effects and population expansions	153
Population structure	154
Assessing where subdivisions occur	154
Statistical tests for historical population structure	156
Marker selection for the study of population subdivision	158
The genetics of metapopulations	161
Metapopulations	161
Testing whether metapopulations exist	162
Distinguishing different types of metapopulations	163
Gene flow and migration rates	165
Genetic estimation of gene flow and migration rates	165
Isolation-by-distance	166
Maximum likelihood methods for estimating migration rates	170
Identification of immigrants	172
Landscape genetics: bringing it all together	173
Molecular markers for population genetics: an appraisal	174
The basis for choice	175
Fundamental tests	176
<i>Summary</i>	177
<i>Review articles</i>	178

<b>6 Molecular and adaptive variation</b>	<b>183</b>
Introduction	183
Neutral markers that are not really neutral	186
Allozymes	186
Nuclear DNA markers	188
Mitochondrial DNA	189
Heterozygosity and fitness	190
Background	190
Allozyme studies	191
DNA markers	192
Molecular approaches to understanding adaptive variation	195
Comparisons of neutral and adaptive variation	195
Variation at specific loci	196
Gene mapping	199
Quantitative traits and adaptive variation	200

Genomics and the study of adaptive variation	203
<i>Summary</i>	206
<i>Review articles</i>	206

<b>7 Phylogeography</b>	<b>209</b>
Introduction	209
Molecular markers in phylogeography	210
Early phylogeography	210
MtDNA as the standard phylogeographic tool	213
Alternatives to mtDNA	213
Genealogies and the coalescent process	214
Genetic variation in space	216
Geographic patterns in single populations	216
Vicariance and dispersal	218
Divergence between populations: drift versus gene flow	220
Gene flow between species	221
Genetic consequences of the Pleistocene ice ages	221
Phylogeography and coevolution	224
Statistical methods in phylogeography	227
Genetic variation in time	229
Geological events and molecular divergence rates	229
Measuring lineage divergence in real time	230
Applied phylogeography	233
Taxonomic decisions	233
Determining a species' natural range	235
Finding the source populations of introduced species	239
Phylogeography and adaptive traits	242
<i>Summary</i>	244
<i>Review articles and books</i>	244

<b>8 Conservation genetics</b>	<b>247</b>
Introduction	247
The state of the biosphere	248
Molecular genetics in conservation biology	250
Genetic diversity as a conservation issue	251
Inbreeding and genetic load	253
The basis of inbreeding effects	253
Inbreeding depression and genetic load in the wild	256

Purging of genetic load	257
Outbreeding depression	259
Genetic restoration	259
Desperate measures	263
Plant conservation	263
Animal conservation	266
Wildlife forensics	268
Genetics in conservation biology – a wider role	269
Systematics and conservation genetics	269
Phylogeography and conservation genetics	271
Conservation management and genetics	273
Globally important areas of genetic diversity	274
Molecular markers in conservation genetics	274
Summary	275
Review articles and books	275

<b>9 Microbial ecology and the metagenome</b>	<b>278</b>
Microbial diversity and the metagenomes	278
Outstanding issues in microbial ecology	280
The role of microbial communities in nature	280
Problems of species identification	283
Population dynamics and community structure	284
Immunological approaches to microbial ecology	285
Immunological methods	285
Use of antibody identification in microbial ecology	288
Ribosomal genes and microbial ecology: the start of metagenomics	291
Structure and usefulness of ribosomal genes	291
Identification: the use of sequence-specific oligonucleotide probes in microbial ecology	293
New developments, problems, and alternative approaches with probes	294
Ribosomal gene sequencing and community studies	297
Genetic profiling of microbial communities	299
Alternatives to ribosomal genes in profiling approaches	302
Genome approaches to microbial ecology	307
Sequence complexity and microbial diversity	307
Microarrays and microbial ecology	308
Metagenomics as an evolving discipline	309
Viral diversity	311

Overview of microbial molecular ecology	312
Molecular markers for microbial ecology: an appraisal	313
Protein methods	313
Nucleic acid methods	314
<i>Summary</i>	314
<i>Review articles</i>	315

<b>10 Genetically modified organisms</b>	<b>317</b>
Introduction	317
Environmental risks from GMOs	319
The role of molecular ecology in GMO research	321
Horizontal gene transfer in nature	322
Conjugation	323
Transduction	325
Transformation	325
Effects of GMOs on natural communities	326
Transfer of genes from GMOs to other organisms	328
Vertical gene transfer	328
Horizontal gene transfer	331
Effects of introduced genes on other species	333
Future GMO research and molecular markers	336
<i>Summary</i>	338
<i>Review articles</i>	339
 <i>Glossary</i>	 341
<i>Answers</i>	347
<i>References</i>	357
<i>Index</i>	391
