

# CONTENTS

<b>Preface</b>	xiv
<b>Acknowledgements</b>	xiv
<b>Nomenclature</b>	xvii

<b>Part One: Introduction and Fundamentals</b>	<b>1</b>
--	----------

<b>1 Catalysis: Introduction and Fundamental Catalytic Phenomena</b>	<b>3</b>
1.1 Emergence of Catalyst Technology, A Brief History	4
1.1.1 Basic Variables for Control of Chemical Reactions	4
1.1.2 A Brief History of Catalyst Technology Development	4
1.2 Importance of Catalysis and Catalyst Technology	6
1.2.1 Impact on Society and Life Forms	6
1.2.2 Economic Importance of Catalyst Technology	8
1.2.3 Catalyst Technology of the Present	8
1.2.4 Catalysis in Your Future	10
1.3 Fundamental Catalytic Phenomena and Principles	12
1.3.1 Definitions	12
1.3.2 The Structure of a Supported Catalyst: Model and Reality	16
1.3.3 Steps in a Heterogeneous Catalytic Reaction	17
1.3.4 Adsorption and Desorption	18
1.3.5 Reaction and Diffusional Resistances for a Catalytic Reaction	24
1.3.6 Kinetics of Catalytic Surface Reactions	33
1.3.7 Effects of Surface Structure and Support on Catalytic Activity	41
1.4 Summary of Important Principles	51
1.5 Recommended Sources for Further Study	54
1.6 Exercises	54
1.7 References	57
<b>2 Catalyst Materials, Properties and Preparation</b>	<b>60</b>
2.1 Introduction	61
2.2 Catalyst Materials	61
2.2.1 Make-up of a Typical Heterogeneous Catalyst	62
2.2.2 Active Phases, Carriers, Promoters	62
2.2.3 Molecular Sieves and Zeolites	68
2.3 Catalyst Properties	78
2.3.1 Catalyst Engineering	78
2.3.2 Physical, Mechanical, and Chemical Properties	80
2.3.3 Dynamic (Catalytic) Properties of Catalysts	89
2.4 Catalyst Preparation and Forming	90
2.4.1 Making the Finished Catalyst	91
2.4.2 Catalyst Forming	102
2.5 The Future	107
2.5.1 Multidisciplinary, Mission-Oriented, Fundamental Research Aimed at Development of New Concepts of Catalysis Design	107
2.5.2 Design of New Molecular Sieves	107
2.5.3 Design of Sophisticated Composite Catalysts Based on Nanostructures	108
2.5.4 Biocatalysts: The Development of Stabilized and/or Supported Enzymes and Organometallic Enzyme Mimics	109
2.5.5 Novel Catalyst Preparation Methods: The Preparation of Amorphous Metal Powders, Supported Catalysts and Nanocolloids by a Sonochemical Technique	109
2.5.6 Combinatorial Design of Catalysts	110
2.5.7 Computational Methods for Design of Catalysts	111
2.6 Summary	111
2.7 Recommended Sources for Further Study	112
2.8 Exercises	113
2.9 References	114

<b>3 Catalyst Characterization and Selection</b>	<b>118</b>
3.1 Principles and Objectives of Catalyst Characterization	119
3.1.1 Definition of Catalyst Characterization	119
3.1.2 Objectives of Catalyst Characterization	121
3.1.3 Some Perspectives and Principles of Characterization	123
3.2 Determining Physical Properties of Catalysts	124
3.2.1 Surface Area, Pore Size, and Pore Volume	124
3.2.2 Particle Size and Size Distribution	135
3.2.3 Mechanical Strength	136
3.2.4 Density	137
3.3 Determining Chemical Properties of Catalysts	138
3.3.1 Chemical Composition	139
3.3.2 Chemical Structure and Morphology	139
3.3.3 Dispersion or Crystallite Size of Catalytic Species	145
3.3.4 Surface Acidity	152
3.3.5 Surface Reactivity	153
3.3.6 Surface Chemistry, Structure, and Composition	160
3.4 Catalyst Selection	179
3.5 The Future	181
3.5.1 Future Directions	181
3.5.2 Future Needs for Catalyst Characterization	184
3.6 Summary	184
3.7 Recommended Sources for Further Study	186
3.8 Exercises	187
3.9 References	191
<b>4 Reactors, Reactor Design, and Activity Testing</b>	<b>197</b>
4.1 Introduction	198
4.2 Definition and Classification of Reactors	198
4.2.1 Definition	198
4.2.2 Classification	199
4.3 Fundamentals of Reactor Design	200
4.3.1 Basic Approach to Reactor Design	200
4.3.2 Material Balances for Ideal Reactors	202
4.3.3 Temperature Effects and Energy Balances	208
4.3.4 Examples of Reactor Design	216
4.4 Collecting, Analyzing and Reporting Data from Laboratory Reactors	224
4.4.1 Collection of Data: Integral and Differential Reactors	224
4.4.2 Analyzing and Reporting Data from Laboratory Reactors	227
4.4.3 Examples of Rate Data Analysis	230
4.5 Choosing Reactors in the Laboratory and Plant	237
4.5.1 Choosing Reactors for the Laboratory	237
4.5.2 Selection of Plant Reactors	242
4.6 The Future	247
4.6.1 Future Trends in Reactor Design and Kinetics	247
4.6.2 Kinetic Models for Reactor and Process Design	248
4.6.3 Process Plant Simulation and Corporate Modeling: A New Paradigm	249
4.7 Summary	250
4.8 Recommended Sources for Further Study	251
4.9 Exercises	252
4.10 References	258
<b>5 Catalyst Deactivation: Causes, Mechanisms, and Treatment</b>	<b>260</b>
5.1 Introduction	261
5.2 Causes and Mechanisms of Deactivation	261
5.2.1 Poisoning	262
5.2.2 Fouling, Coking, and Carbon Deposition	267
5.2.3 Thermal Degradation and Sintering	274
5.2.4 Loss of Catalytic Phases by Vapor Transport	279

5.2.5	Mechanical Failure: Attrition and Crushing of Catalysts	281
5.3	Prevention and Regenerative Treatment of Catalyst Decay	283
5.3.1	Prevention of Catalyst Decay	283
5.3.2	Regeneration of Deactivated Catalysts	287
5.4	Treatment of Catalyst Decay in Reactor and Process Design and Operation	293
5.4.1	Modeling and Design of Deactivation Processes	293
5.4.2	Experimental Assessment of Deactivation Kinetics	300
5.4.3	Reactor and Process Design and Operation with Deactivating Catalyst	312
5.5	The Future	321
5.5.1	Projected Trends	321
5.5.2	Future Needs	322
5.6	Summary	322
5.7	Recommended Sources for Further Study	323
5.8	Exercises	324
5.9	References	331
<b>Part Two: Industrial Practice</b>		337
<b>6 Hydrogen Production and Synthesis Gas Reactions</b>		339
6.1	Introduction	340
6.2	Production of Hydrogen and Synthesis Gas via Steam Reforming	342
6.2.1	Overall Process	342
6.2.2	Purification of Hydrocarbons	344
6.2.3	Primary Steam Reforming	345
6.2.4	Secondary Steam Reforming	367
6.2.5	High-Temperature Water-Gas-Shift	367
6.2.6	Low-Temperature Water-Gas-Shift	369
6.2.7	Final CO/CO <sub>2</sub> Removal/Methanation	370
6.3	Ammonia Synthesis	371
6.3.1	Introduction and Background	371
6.3.2	Reaction Chemistry, Thermodynamics, Kinetics, and Mechanism	372
6.3.3	Catalyst Design	376
6.3.4	Catalyst Deactivation	379
6.3.5	Reactor and Process Design	380
6.4	Methanol Synthesis	382
6.4.1	Introduction	382
6.4.2	Reaction Chemistry and Equilibrium Thermodynamics	382
6.4.3	Reaction Mechanism, Active Sites, and Kinetics	385
6.4.4	Methanol Synthesis Catalysts	390
6.4.5	Catalyst Deactivation	392
6.4.6	Methanol Synthesis Process	393
6.4.7	Methanol Synthesis Literature	397
6.4.8	Higher Alcohol Synthesis	398
6.5	Fischer-Tropsch Synthesis	398
6.5.1	Introduction	398
6.5.2	History	398
6.5.3	Chemistry and Thermodynamics	402
6.5.4	Mechanisms, Kinetics, and Models	405
6.5.6	Co Product Distributions in and Selectivity Models of FTS	429
6.5.7	Catalyst Deactivation and Regeneration	450
6.5.8	Reactor Design	457
6.5.9	Process Technology	461
6.6	The Future	464
6.6.1	General Trends	464
6.6.2	Hydrogen and Synthesis Gas Production	465
6.6.3	Ammonia Synthesis	465
6.6.4	Methanol Synthesis	465
6.6.5	Fischer-Tropsch Synthesis	466
6.7	Summary	466
6.8	Recommended Readings for Further Study	467
6.9	Exercises	470

6.10	References	472
<b>7</b>	<b>Hydrogenation and Dehydrogenation of Organic Compounds</b>	<b>487</b>
7.1	Introduction	488
7.2	Hydrogenation Catalyst and Reactor Technologies	488
7.2.1	Hydrogenation Catalysts	488
7.2.2	Hydrogenation Reactor Design, Reactor Technology, and Process Conditions	496
7.3	Hydrogenation Reactions and Processes	513
7.3.1	Hydrogenation of Alkenes to Alkanes and Alkadienes or Alkynes to Alkenes	513
7.3.2	Hydrogenation of Aromatics and Nitroaromatics	518
7.3.3	Hydrogenation of Nitriles to Amines	523
7.3.4	Hydrogenation of Fats and Oils	524
7.3.5	Hydrogenation of Carbonyl Groups	531
7.3.6	Miscellaneous Hydrogenation Reactions	532
7.4	Dehydrogenation: Reaction Chemistry; Catalyst and Reactor Technologies	533
7.4.1	Dehydrogenation Reaction Chemistry	534
7.4.2	Dehydrogenation Catalysts	535
7.4.3	Dehydrogenation Reactor Technology	536
7.5	Important Dehydrogenation Reactions and Processes	536
7.5.1	Alkanes to Alkenes	536
7.5.2	Dehydrogenation of Ethylbenzene to Styrene	543
7.6	The Future	545
7.6.1	Hydrogenation Catalysis	545
7.6.2	Dehydrogenation Catalysis	548
7.7	Summary	549
7.8	Recommended Sources for Further Study	550
7.9	Exercises	551
7.10	References	554
<b>8</b>	<b>Catalytic Oxidations of Inorganic and Organic Compounds</b>	<b>560</b>
8.1	Catalytic Oxidation Reactions	561
8.1.1	Introduction, Background, and Perspective	561
8.1.2	Classification of Oxidation Reactions	561
8.2	Oxidation of Inorganic Compounds	562
8.2.1	Introduction	562
8.2.2	Sulfuric Acid Production	562
8.2.3	Nitric Acid Production	570
8.3	Hydrogen Cyanide Production (Ammoxidation of Methane)	575
8.3.1	Reaction Chemistry	575
8.3.2	Catalyst	576
8.3.3	Processes	576
8.3.4	Catalyst Deactivation	578
8.4	Selective (Partial) Oxidation of Organic Compounds	578
8.4.1	Introduction, Background and Chemistry	578
8.4.2	Methanol to Formaldehyde	584
8.4.3	Ethylene to Ethylene Oxide	597
8.4.4	Ammoxidation of Propylene to Acrylonitrile and Related Processes	604
8.4.5	<i>n</i> -Butane to Maleic Anhydride	610
8.5	Future of Catalytic Oxidation	618
8.5.1	Short-Term Trends	619
8.5.2	Long-Term Future	621
8.6	Summary	624
8.7	Recommended Sources for Further Study	626
8.8	Exercises	627
8.9	References	629
<b>9</b>	<b>Petroleum Refining and Processing</b>	<b>635</b>
9.1	Petroleum Refining	636
9.1.1	Introduction	636
9.1.2	Fractionation of Petroleum	637

9.1.3	Major Catalytic Applications for Upgrading Distilled Crude Oil	639
<b>9.2</b>	<b>Hydrotreating</b>	639
9.2.1	Reaction Chemistry and Kinetics	639
9.2.2	Hydrotreating Catalyst Design	645
9.2.3	Reactor Design	647
9.2.4	Hydrotreating Process	648
9.2.5	Catalyst Deactivation and Regeneration	649
9.2.6	Ultra Low Sulfur Diesel	652
<b>9.3</b>	<b>Catalytic Cracking</b>	653
9.3.1	Reaction Chemistry of Fluidized Catalytic Cracking	653
9.3.2	Mechanisms and Kinetics	655
9.3.3	Cracking Catalysts	662
9.3.4	Catalytic Cracking Process	669
9.3.5	Deactivation	670
<b>9.4</b>	<b>Hydrocracking</b>	671
9.4.1	Chemistry	671
9.4.2	Catalysts	672
9.4.3	Process	673
9.4.4	Catalyst Deactivation	673
<b>9.5</b>	<b>Naphtha Reforming</b>	674
9.5.1	Chemistry	675
9.5.2	Catalysts	678
9.5.3	Process	679
9.5.4	Catalyst Deactivation and Regeneration	681
<b>9.6</b>	<b>Isomerization</b>	682
9.6.1	Hydroisomerization of Normal Butane, Pentane and Hexane	682
9.6.2	Isomerization of Xylenes	684
<b>9.7</b>	<b>Alkylation</b>	685
9.7.1	Catalysts	685
9.7.2	Liquid Acid Process	686
9.7.3	Ethylbenzene Synthesis	687
<b>9.8</b>	<b>Reformulated Gasoline and Methyl-<i>t</i>-Butyl Ether</b>	687
9.8.1	Reformulated Gasoline (RFG)	687
9.8.2	MTBE Production	688
<b>9.9</b>	<b>The Future</b>	689
9.9.1	Near-Term and Process-Specific Trends	689
9.9.2	The Long Term Future of Refining (the next 10–25 years)	692
<b>9.10</b>	<b>Summary</b>	695
<b>9.11</b>	<b>Recommended Sources for Further Study</b>	696
<b>9.12</b>	<b>Exercises</b>	696
<b>9.13</b>	<b>References</b>	699
<b>10</b>	<b>Environmental Catalysis: Mobile Sources</b>	705
10.1	Introduction	706
10.2	Automotive Gasoline Catalytic Converters	707
10.2.1	Introduction and Background	707
10.2.2	Early Oxidation Converters (1976–1979)	708
10.2.3	Three-way Catalysts (1979–2000)	713
10.2.4	Modern Three Way Catalytic Converters (Post–2000)	717
10.2.5	Lean Burn Engines and Emissions Abatement Catalysts	724
10.2.6	Converter Design	725
10.3	Catalytic Abatement of Emissions from Diesel Engines	731
10.3.1	Diesel Emissions	731
10.3.2	Diesel Oxidation Catalyst	733
10.3.3	Engine Testing of Catalysts	736
10.3.4	Catalyst Deactivation	736
10.3.5	Catalytic Treatment of Soot from Diesel Emission	737
10.3.6	Future of Diesel Emission Abatement	738
10.4	Ozone Abatement in High-Flying Commercial Aircraft	742
10.5	Summary	743

10.5.1	Development, Technological Significance and Status of Catalytic Emissions Controls for Gasoline-Powered Vehicles	743
10.5.2	Development and Status of Catalytic Emissions Control Technology for Diesel-Powered Vehicles	744
10.5.3	Future Trends in Catalytic Emissions Control for Mobile Sources	745
10.6	Recommended Sources for Further Study	745
10.7	Exercises	746
10.8	References	747
<b>11</b>	<b>Environmental Catalysis: Stationary Sources</b>	<b>753</b>
11.1	Introduction	754
11.2	Catalytic Reduction of NO <sub>x</sub>	755
11.2.1	Non-Selective Catalytic Reduction of NO <sub>x</sub>	755
11.2.2	Selective Catalytic Reduction of NO <sub>x</sub>	756
11.2.3	N <sub>2</sub> O Decomposition	777
11.3	Catalytic Oxidation of Hydrocarbon (VOC) Emissions	778
11.4	Catalytic Oxidation of CO Emissions	783
11.5	Kinetics of and Reactor Design for CO and VOC Oxidations	784
11.5.1	Kinetics and Reactor Design for Oxidation of CO	785
11.5.2	Kinetics and Reactor Design for Oxidation of Hydrocarbons	789
11.5.3	Representative, Relevant Modeling Studies	794
11.6	Catalytic Abatement of Emissions from Wood Stoves	785
11.7	The Future	796
11.7.1	Introduction	796
11.7.2	Advanced/Novel Catalytic Materials	796
11.7.3	Catalytically Supported Thermal Combustion	797
11.7.4	Management of Hazardous and Toxic Materials, Wastes and CFCs	800
11.7.5	Catalytic Clean-up for Specialty Applications	800
11.7.6	Green Engineering/Chemistry and Renewable Processes	802
11.7.7	Future Needs	805
11.8	Summary	805
11.9	Recommendations for Further Study	806
11.10	Exercises	807
11.11	References	810
<b>12</b>	<b>Homogeneous, Enzyme, And Polymerization Catalysis</b>	<b>820</b>
12.1	Homogeneous Catalysis	821
12.1.1	Introduction and Definitions	821
12.1.2	Fundamentals of Homogeneous Catalysis	822
12.1.3	Industrial Homogeneous Catalytic Processes	837
12.1.4	Examples of Important Processes	840
12.1.5	The Future of Homogeneous Catalysis	844
12.2	Enzyme Catalysis	846
12.2.1	Introduction	846
12.2.2	Chemistry, Kinetics, and Mechanisms	847
12.2.3	Industrial Enzymatic Processes and Biotechnology	852
12.2.4	Examples of Important Processes	859
12.2.5	The Future of Enzyme Catalysis	862
12.3	Polymerization Catalysis	864
12.3.1	Introduction and Definitions	864
12.3.2	Fundamentals of Polymerization Synthesis/Catalysis	871
12.3.3	Industrial Polymerization Catalysts and Catalytic Processes	879
12.3.4	Examples of Important Polymerization Processes	887
12.3.5	The Future of Polymerization Catalysis	895
12.4	Summary	897
12.5	Recommended Sources for Further Study	899
12.6	Exercises	901
12.7	References	903

<b>13 Hydrogen Production and Fuel Cells: Catalyst Technology</b>	<b>909</b>
13.1 Introduction, Perspective, and Objectives	910
13.2 Production of Hydrogen for Fuel cells	912
13.2.1 Traditional catalytic steps in the production of Hydrogen for Chemical Applications	912
13.2.2 Alternative Approaches to Generating Hydrogen for the Fuel Cell	914
13.3 The Proton Exchange Membrane (PEM) Fuel Cell	921
13.3.1 PEM Fuel Cell	921
13.3.2 Electrochemical Reactions	922
13.3.3 The Membrane Electrode Assembly (MEA)	923
13.3.4 The Solid Polymer Membrane	924
13.3.5 Potential Applications of PEM Fuel Cells	925
13.3.6 Operational Factors in a PEM Fuel Processor/Fuel Cell	926
13.4 Other Fuel Cells	927
13.4.1 Alkaline Electrolyte Fuel Cell	927
13.4.2 Phosphoric Acid Fuel Cell	927
13.4.2 Molten Carbonate Fuel Cell	928
13.4.4 Solid Oxide Fuel Cell	930
13.4.5 Direct Methanol Fuel Cell	931
13.5 Summary and Concluding Remarks	931
13.6 Recommended Sources for Further Study	932
13.7 Exercises	933
13.8 References	933
<b>Glossary</b>	<b>939</b>
<b>Index</b>	<b>954</b>
