Preface	xvii
Abstract	xxiii
Resumen (in Spanish)	xxv
Objectives	xxvii
Introduction	1
Chapter 1. Background	
1.1. Carbon nanotubes.....	5
1.1.1. <i>Properties</i>	5
1.1.2. <i>Applications</i>	11
1.2. Manipulation of carbon nanotubes in viscous media by electric fields.....	13
1.2.1. <i>Basic theory of dielectrophoresis</i>	13
1.2.2. <i>Dielectrophoresis and alignment of carbon nanotubes</i> <i>in viscous media</i>	16
1.3. Carbon nanotube/polymer composites tailored by electric fields	18
1.3.1. <i>Mechanical, electrical and piezoresistive properties of</i> <i>aligned carbon nanotube/polymer composites</i>	18
1.3.2. <i>Governing mechanisms of the piezoresistive response</i> <i>of carbon nanotube/polymer composites</i>	20

Chapter 2. Experimental investigation of carbon nanotube network formation in viscous media induced by electric fields

2.1. Experimental.....	23
2.1.1. <i>Materials and experimental setup</i>	23
2.1.2. <i>Characterization methods</i>	26
2.2. In situ measurements of electrical current	27
2.3. Characterization of the carbon nanotube networks.....	31
2.3.1. <i>Macroscopic observation of the dynamic evolution and frequency effect</i>	31
2.3.2. <i>Observation of alignment at different length scales</i>	36

Chapter 3. Modeling the carbon nanotube network formation in viscous media under alternating current electric fields

3.1. Modeling.....	41
3.1.1. <i>Model description</i>	41
3.1.2. <i>Carbon nanotube rotation</i>	43
3.1.3. <i>Carbon nanotube-to-carbon nanotube Coulombic interaction</i>	44
3.1.4. <i>Carbon nanotube migration towards an electrode</i>	46
3.1.5. <i>Material properties</i>	47
3.2. Results.....	47
3.2.1. <i>Determination of the interface layer parameters and effect of frequency</i>	47
3.2.2. <i>Carbon nanotube rotation</i>	50
3.2.3. <i>Carbon nanotube-to-carbon nanotube Coulombic interaction</i>	52
3.2.4. <i>Carbon nanotube migration towards an electrode</i>	54
3.2.5. <i>Reconstruction of the sequence of events</i>	56

Chapter 4. Characterization of aligned carbon nanotube/polymer composites

4.1. Materials and methods.....	59
4.1.1. <i>Fabrication of polymer composites</i>	59
4.1.2. <i>Characterization of polymer composites</i>	60
4.2. Results.....	62

4.2.1. Morphological characterization.....	62
4.2.2. Electrical conductivity.....	63
4.2.3. Mechanical and piezoresistive behavior.....	65
Chapter 5. Modeling the contribution of carbon nanotube deformation to the piezoresistive response of carbon nanotube/polymer composites	
5.1. Piezoresistive models.....	69
5.1.1. Carbon nanotube as an inhomogeneity embedded in a polymer matrix.....	69
5.1.2. Carbon nanotube/polymer composite as an electrically effective material.....	71
5.2. Prediction of carbon nanotube deformation.....	72
5.2.1. Micromechanics approach.....	72
5.2.2. Representative volume element.....	73
5.2.3. Finite element analysis.....	73
5.3. Results.....	75
5.3.1. Strain concentration tensor.....	75
5.3.2. Influence of the carbon nanotube length and matrix elastic modulus.....	77
5.3.3. Piezoresistivity of the carbon nanotube/polymer composite as an electrically effective material	80
5.3.4. Examination of the carbon nanotube geometric contribution.....	81
Conclusions.....	83
Appendix A. Derivation of the carbon nanotube dielectrophoretic torque.....	87
Appendix B. Initial separation of two neighboring carbon nanotubes	89
Appendix C. Finite element simulation of the electric field gradient of a system of parallel electrodes with an attached carbon nanotube.....	93
References.....	97
