PART 1

OVERALL PROPERTIES OF HETEROGENEOUS MATERIALS

PRÉCIS: PART 1	3
 CHAPTER I AGGREGATE PROPERTIES AND AVERAGING METHODS	 9
 SECTION 1. AGGREGATE PROPERTIES	 11
1.1. REPRESENTATIVE VOLUME ELEMENT (RVE)	11
1.2. SCOPE OF THE BOOK	16
1.3. DESCRIPTION OF RVE	19
1.4. REFERENCES	23
 SECTION 2. AVERAGING METHODS	 27
2.1. AVERAGE STRESS AND STRESS RATE	27
2.2. AVERAGE STRAIN AND STRAIN RATE	29
2.3. AVERAGE RATE OF STRESS-WORK	31
2.3.1. Uniform Boundary Traction	33
2.3.2. Linear Boundary Velocities	34
2.3.3. Other Useful Identities	34
2.3.4. Virtual Work Principle	35
2.4. INTERFACES AND DISCONTINUITIES	35
2.5. POTENTIAL FUNCTION FOR MACRO-ELEMENTS	38
2.5.1. Stress Potential	40
2.5.2. Strain Potential	41
2.5.3. Relation between Macropotentials	42
2.5.4. On Definition of RVE	44
2.5.5. Linear Versus Nonlinear Response	45
2.5.6. General Relations Between Macropotentials	45
2.5.7. Bounds on Macropotential Functions	50

2.6. STATISTICAL HOMOGENEITY, AVERAGE QUANTITIES, AND OVERALL PROPERTIES	53
2.6.1. Local Average Fields	55
2.6.2. Limiting Process and Limit Fields	58
2.7. NONMECHANICAL PROPERTIES	59
2.7.1. Averaging Theorems	59
2.7.2. Macropotentials	60
2.7.3. Basic Inequalities	61
2.8. COUPLED MECHANICAL AND NONMECHANICAL PROPERTIES	63
2.8.1. Field Equations	63
2.8.2. Averaging Theorems	65
2.8.3. Stress/Electric-field Potential	66
2.8.4. Strain/Electric-displacement Potential	67
2.8.5. Basic Inequalities	68
2.9. REFERENCES	71
 CHAPTER II ELASTIC SOLIDS WITH MICROCAVITIES AND MICROCRACKS	 73
 SECTION 3. LINEARLY ELASTIC SOLIDS	 75
3.1. HOOKE'S LAW AND MATERIAL SYMMETRY	75
3.1.1. Elastic Moduli	75
3.1.2. Elastic Compliances	77
3.1.3. Elastic Symmetry	78
3.1.4. Plane Strain/Plane Stress	82
3.2. RECIPROCAL THEOREM, SUPERPOSITION, AND GREEN'S FUNCTION	86
3.2.1. Reciprocal Theorem	87
3.2.2. Superposition	87
3.2.3. Green's Function	88
3.3. REFERENCES	91
 SECTION 4. ELASTIC SOLIDS WITH TRACTION-FREE DEFECTS	 93
4.1. STATEMENT OF PROBLEM AND NOTATION	93
4.2. AVERAGE STRAIN FOR PRESCRIBED MACROSTRESS	95
4.3. OVERALL COMPLIANCE TENSOR FOR POROUS ELASTIC SOLIDS	97
4.4. AVERAGE STRESS FOR PRESCRIBED MACROSTRAIN	98
4.5. OVERALL ELASTICITY TENSOR FOR POROUS ELASTIC SOLIDS	100
4.6. REFERENCES	102

SECTION 5. ELASTIC SOLIDS WITH MICROCAVITIES	103
5.1. EFFECTIVE MODULI OF AN ELASTIC PLATE CONTAINING CIRCULAR HOLES	103
5.1.1. Estimates of Three-Dimensional Moduli from Two-Dimensional Results	104
5.1.2. Effective Moduli: Dilute Distribution of Cavities	106
5.1.3. Effective Moduli: Self-Consistent Estimates	111
5.1.4. Effective Moduli in x_3 -Direction	113
5.2. EFFECTIVE BULK MODULUS OF AN ELASTIC BODY CONTAINING SPHERICAL CAVITIES	115
5.3. ENERGY CONSIDERATION AND SYMMETRY PROPERTIES OF TENSOR $\mathbf{H}$	117
5.4. CAVITY STRAIN	118
5.5. REFERENCES	119
 SECTION 6. ELASTIC SOLIDS WITH MICROCRACKS	 121
6.1. OVERALL STRAIN DUE TO MICROCRACKS	121
6.2. OVERALL COMPLIANCE AND MODULUS TENSORS OF HOMOGENEOUS LINEARLY ELASTIC SOLIDS WITH MICROCRACKS	123
6.3. EFFECTIVE MODULI OF AN ELASTIC SOLID CONTAINING ALIGNED SLIT MICROCRACKS	124
6.3.1. Crack Opening Displacements	125
6.3.2. Effective Moduli: Dilute Distribution of Aligned Microcracks	125
6.3.3. Effective Moduli: Dilute Distribution of Aligned Frictional Microcracks	129
6.4. EFFECTIVE MODULI OF AN ELASTIC SOLID CONTAINING RANDOMLY DISTRIBUTED SLIT MICROCRACKS	131
6.4.1. Effective Moduli: Random Dilute Distribution of Open Microcracks	131
6.4.2. Effective Moduli: Self-Consistent Estimate	135
6.4.3. Effective Moduli in Antiplane Shear: Random Dilute Distribution of Frictionless Microcracks	137
6.4.4. Plane Stress, Plane Strain, and Three-Dimensional Overall Moduli	140
6.4.5. Effect of Friction and Load-Induced Anisotropy	141
6.5. EFFECTIVE MODULI OF AN ELASTIC BODY CONTAINING ALIGNED PENNY-SHAPED MICROCRACKS	147
6.5.1. Crack-Opening-Displacements	147
6.5.2. Effective Moduli: Dilute Distribution of Aligned Microcracks	147
6.6. EFFECTIVE MODULI OF AN ELASTIC BODY CONTAINING RANDOMLY DISTRIBUTED PENNY-SHAPED MICROCRACKS	151
6.6.1. Dilute Open Microcracks with Prescribed Distribution	151
6.6.2. Effective Moduli: Random Dilute Distribution of Microcracks	154
6.6.3. Effective Moduli: Self-Consistent Estimates	158

6.7. EFFECTIVE MODULI OF AN ELASTIC BODY CONTAINING PENNY-SHAPED MICROCRACKS PARALLEL TO AN AXIS	162
6.8. INTERACTION EFFECTS	167
6.8.1. Crack-Opening-Displacements and Associated Strains	168
6.8.2. Dilute Distribution of Parallel Crack Arrays	170
6.8.3. Randomly Oriented Open Slit Crack Arrays Parallel to an Axis	172
6.9. BRITTLE FAILURE IN COMPRESSION	174
6.9.1. Introductory Comments	174
6.9.2. Bridgman Paradoxes	176
6.9.3. A New Look at Microcracking in Compression	180
6.9.4. Model Calculations: Axial Splitting	184
6.9.5. Model Calculations: Faulting	187
6.9.6. Model Calculations: Brittle-Ductile Transition	188
6.10. DYNAMIC BRITTLE FAILURE IN COMPRESSION	193
6.10.1. Strain-rate Effect on Brittle Failure in Compression	195
6.10.2. Illustrative Examples of Dynamic Brittle Failure in Compression	197
6.11. REFERENCES	200
 CHAPTER III ELASTIC SOLIDS WITH MICRO-INCLUSIONS	 207
 SECTION 7. OVERALL ELASTIC MODULUS AND COMPLIANCE TENSORS	 209
7.1. MACROSTRESS PRESCRIBED	209
7.2. MACROSTRAIN PRESCRIBED	212
7.3. EIGENSTRAIN AND EIGENSTRESS TENSORS	213
7.3.1. Eigenstrain	215
7.3.2. Eigenstress	216
7.3.3. Uniform Eigenstrain and Eigenstress	216
7.3.4. Consistency Conditions	218
7.3.5. H - and J -Tensors	220
7.3.6. Eshelby's Tensor for Special Cases	221
7.3.7. Transformation Strain	223
7.4. ESTIMATES OF OVERALL MODULUS AND COMPLIANCE TENSORS: DILUTE DISTRIBUTION	225
7.4.1. Macrostress Prescribed	226
7.4.2. Macrostrain Prescribed	227
7.4.3. Equivalence between Overall Compliance and Elasticity Tensors	228
7.5. ESTIMATES OF OVERALL MODULUS AND COMPLIANCE	

TENSORS: SELF-CONSISTENT METHOD	229
7.5.1. Macrostress Prescribed	230
7.5.2. Macrostrain Prescribed	231
7.5.3. Equivalence of Overall Compliance and Elasticity Tensors Obtained by Self-Consistent Method	231
7.5.4. Overall Elasticity and Compliance Tensors for Polycrystals	233
7.6. ENERGY CONSIDERATION AND SYMMETRY OF OVERALL ELASTICITY AND COMPLIANCE TENSORS	235
7.6.1. Macrostrain Prescribed	236
7.6.2. Macrostress Prescribed	237
7.6.3. Equivalence of Overall Compliance and Elasticity Tensors Obtained on the Basis of Elastic Energy	238
7.6.4. Certain Exact Identities Involving Overall Elastic Energy	240
7.7. REFERENCES	242
 SECTION 8. EXAMPLES OF ELASTIC SOLIDS WITH ELASTIC MICRO-INCLUSIONS	 245
8.1. RANDOM DISTRIBUTION OF SPHERICAL MICRO-INCLUSIONS	245
8.1.1. Effective Moduli: Dilute Distribution of Spherical Inclusions	246
8.1.2. Effective Moduli: Self-Consistent Estimates	248
8.2. EFFECTIVE MODULI OF AN ELASTIC PLATE CONTAINING ALIGNED REINFORCING-FIBERS	250
8.2.1. Effective Moduli: Dilute Distribution of Fibers	254
8.2.2. Effective Moduli: Self-Consistent Estimates	255
8.2.3. Effective Moduli in Antiplane Shear: Dilute-Distribution and Self-Consistent Estimates	256
8.3. THREE-DIMENSIONAL ANALYSIS OF PLANE STRAIN AND PLANE STRESS STATES	259
8.3.1. Reduction of Three-Dimensional Moduli to Two-Dimensional Moduli	259
8.3.2. Two-Dimensional Nominal Eshelby Tensor	260
8.3.3. Computation of Nominal Eshelby Tensor for Plane Stress	261
8.4. REFERENCES	262
 SECTION 9. UPPER AND LOWER BOUNDS FOR OVERALL ELASTIC MODULI	 265
9.1. HASHIN-SHTRIKMAN VARIATIONAL PRINCIPLE	267
9.1.1. Macrostress Prescribed	267
9.1.2. Macrostrain Prescribed	271
9.2. UPPER AND LOWER BOUNDS FOR ENERGY FUNCTIONALS	275
9.2.1. Stiff Micro-Inclusions	276
9.2.2. Compliant Micro-Inclusions	278
9.2.3. Bounds for Elastic Strain and Complementary Elastic Energies	278
9.3. GENERALIZED BOUNDS ON OVERALL ENERGIES	280

9.3.1. Correlation Tensors	281
9.3.2. Upper and Lower Bounds on Overall Energies	283
9.3.3. Subregion Approximation Method	286
9.4. DIRECT ESTIMATES OF OVERALL MODULI	287
9.4.1. Boundary-Value Problems for Equivalent Homogeneous Solid	288
9.4.2. Simplified Integral Operators	290
9.4.3. Approximate Correlation Tensors	291
9.4.4. Optimal Eigenstrains and Eigenstresses	294
9.5. GENERALIZED VARIATIONAL PRINCIPLES; EXACT BOUNDS	296
9.5.1. Generalization of Energy Functionals and Bounds	296
9.5.2. Inequalities among Generalized Energy Functionals	302
9.5.3. Functionals with Simplified Integral Operators	303
9.5.4. Exact Bounds Based on Simplified Functionals	310
9.5.5. Calculation of Bounds	314
9.5.6. Alternative Formulation of Exact Inequalities: Direct Evaluation of Exact Bounds	316
9.6. UNIVERSAL BOUNDS FOR OVERALL MODULI	320
9.6.1. Equivalence of Two Approximate Functionals	321
9.6.2. Summary of Exact Inequalities	322
9.6.3. Universal Bounds for Overall Moduli of Ellipsoidal RVE (1)	323
9.6.4. Universal Bounds for Overall Moduli of Ellipsoidal RVE (2)	327
9.6.5. Relation between Universal Bounds and Estimated Bounds	328
9.7. BOUNDS FOR OVERALL NONMECHANICAL MODULI	330
9.7.1. Generalized Hashin-Shtrikman Variational Principle	331
9.7.2. Consequence of Universal Theorems	333
9.7.3. Universal Bounds for Overall Conductivity	335
9.8. BOUNDS FOR OVERALL MODULI OF PIEZOELECTRIC RVE'S	339
9.8.1. Generalized Hashin-Shtrikman Variational Principle	339
9.8.2. Consequence of Universal Theorems	343
9.8.3. Comments on Computing Bounds for Overall Moduli	346
9.9. REFERENCES	349
SECTION 10. SELF-CONSISTENT, DIFFERENTIAL, AND RELATED AVERAGING METHODS	353
10.1. SUMMARY OF EXACT RELATIONS BETWEEN AVERAGE QUANTITIES	353
10.1.1. Assumptions in Dilute-Distribution Model	354
10.1.2. Dilute Distribution: Modeling Approximation	356
10.2. SELF-CONSISTENT METHOD	357
10.3. DIFFERENTIAL SCHEME	361
10.3.1. Two-Phase RVE	362
10.3.2. Multi-Phase RVE	364
10.3.3. Equivalence between Overall Elasticity and Compliance Tensors	367

10.4. TWO-PHASE MODEL AND DOUBLE-INCLUSION METHOD	368
10.4.1. Basic Formulation: Two-Phase Model	369
10.4.2. Comments on Two-Phase Model	373
10.4.3. Relation with Hashin-Shtrikman Bounds	374
10.4.4. Generalization of Eshelby's Results	375
10.4.5. Double-Inclusion Method	378
10.4.6. Multi-Inclusion Method	381
10.4.7. Multi-Phase Composite Model	382
10.4.8. Bounds on Overall Moduli by Double-Inclusion Method	384
10.5. EQUIVALENCE AMONG ESTIMATES BY DILUTE DISTRIBUTION, SELF-CONSISTENT, DIFFERENTIAL, AND DOUBLE-INCLUSION METHODS	386
10.6. OTHER AVERAGING SCHEMES	388
10.6.1. Composite-Spheres Model	389
10.6.2. Three-Phase Model	390
10.7. REFERENCES	394
SECTION 11. ESHELBY'S TENSOR AND RELATED TOPICS	397
11.1. EIGENSTRAIN AND EIGENSTRESS PROBLEMS	397
11.1.1. Green's Function for Infinite Domain	398
11.1.2. The Body-Force Problem	399
11.1.3. The Eigenstrain- or Eigenstress-Problem	400
11.2. ESHELBY'S TENSOR	402
11.2.1. Uniform Eigenstrains in an Ellipsoidal Domain	402
11.2.2. Eshelby's Tensor for an Isotropic Solid	403
11.2.3. Eshelby's Tensor for Anisotropic Media	406
11.3. SOME BASIC PROPERTIES OF ESHELBY'S TENSOR	407
11.3.1. Symmetry of the Eshelby Tensor	407
11.3.2. Conjugate Eshelby Tensor	408
11.3.3. Evaluation of Average Quantities	409
11.4. RELATIONS AMONG AVERAGE QUANTITIES	412
11.4.1. General Relations	412
11.4.2. Superposition of Uniform Strain and Stress Fields	414
11.4.3. Prescribed Boundary Conditions	415
11.5. REFERENCES	417
CHAPTER IV SOLIDS WITH PERIODIC MICROSTRUCTURE	419
SECTION 12. GENERAL PROPERTIES AND FIELD EQUATIONS	421
12.1. PERIODIC MICROSTRUCTURE AND RVE	421
12.2. PERIODICITY AND UNIT CELL	422
12.3. FOURIER SERIES	424

12.3.1. Displacement and Strain Fields	425
12.3.2. Stress Field	427
12.4. HOMOGENIZATION	428
12.4.1. Periodic Eigenstrain and Eigenstress Fields	428
12.4.2. Governing Equations	429
12.4.3. Periodic Integral Operators	430
12.4.4. Isotropic Matrix	432
12.4.5. Consistency Conditions	433
12.4.6. Alternative Formulation	435
12.5. TWO-PHASE PERIODIC MICROSTRUCTURE	439
12.5.1. Average Eigenstrain Formulation	439
12.5.2. Modification for Multi-Phase Periodic Microstructure	442
12.5.3. Properties of the g-Integral	442
12.6. ELASTIC INCLUSIONS AND CAVITIES	444
12.6.1. Elastic Spherical Inclusions	445
12.6.2. Elastic Ellipsoidal Inclusions	447
12.6.3. Cylindrical Voids	448
12.7. PERIODICALLY DISTRIBUTED MICROCRACKS	450
12.7.1. Limit of Eshelby's Solution	451
12.7.2. The g-Integral for a Crack	453
12.7.3. Piecewise Constant Distribution of Eigenstrain	454
12.7.4. Stress Intensity Factor of Periodic Cracks	457
12.7.5. Illustrative Examples	459
12.8. APPLICATION TO NONLINEAR COMPOSITES	461
12.9. REFERENCES	464
SECTION 13. OVERALL PROPERTIES OF SOLIDS WITH PERIODIC MICROSTRUCTURE	467
13.1. GENERAL EQUIVALENT HOMOGENEOUS SOLID	468
13.1.1. Notation and Introductory Comments	468
13.1.2. Macrofield Variables and Homogeneous Solutions	469
13.1.3. Periodic Microstructure versus RVE	471
13.1.4. Unit Cell as a Bounded Body	472
13.1.5. Equivalent Homogeneous Solid for Periodic Microstructure	473
13.2. HASHIN-SHTRIKMAN VARIATIONAL PRINCIPLE APPLIED TO PERIODIC STRUCTURES	476
13.2.1. Self-Adjointness	476
13.2.2. Hashin-Shtrikman Variational Principle and Bounds on Overall Moduli	478
13.2.3. Equivalence of Two Energy Functionals	479
13.2.4. Alternative Formulation of Exact Bounds	482
13.3. APPLICATION OF FOURIER SERIES EXPANSION TO ENERGY FUNCTIONALS	485
13.3.1. Fourier Series Representation of Eigenstress	485

13.3.2. Truncated Fourier Series of Eigenstress Field	487
13.3.3. Matrix Representation of Euler Equations	488
13.4. EXAMPLE: ONE-DIMENSIONAL PERIODIC MICROSTRUCTURE	491
13.4.1. Exact Solution	491
13.4.2. Equivalent Homogeneous Solid with Periodic Eigenstress Field	493
13.4.3. Hashin-Shtrikman Variational Principle	494
13.5. PIECEWISE CONSTANT APPROXIMATION AND UNIVERSAL BOUNDS	497
13.5.1. Piecewise Constant Approximation of Eigenstress Field	497
13.5.2. Computation of Energy Functions and Universal Bounds	499
13.5.3. General Piecewise Constant Approximation of Eigenstress Field	502
13.6. EXAMPLES	505
13.6.1. Example (1): One-Dimensional Periodic Structure	505
13.6.2. Example (2): Three-Dimensional Periodic Structure	506
13.7. REFERENCES	510
SECTION 14. MIRROR-IMAGE DECOMPOSITION OF PERIODIC FIELDS	511
14.1. MIRROR IMAGES OF POSITION VECTORS AND VECTORS	511
14.2. MIRROR-IMAGE SYMMETRY/ANTISYMMETRY OF TENSOR FIELDS	516
14.2.1. Mirror-Image (MI) Sym/Ant of Tensor Fields	516
14.2.2. MI Sym/Ant Decomposition of Tensor Fields	517
14.2.3. Components of MI Sym/Ant Parts	519
14.2.4. Operations on MI Sym/Ant Parts of Tensor Fields	520
14.3. MIRROR-IMAGE SYMMETRY AND ANTISYMMETRY OF FOURIER SERIES	521
14.3.1. MI Sym/Ant of Complex Kernel	521
14.3.2. MI Sym/Ant of Fourier Series	522
14.4. BOUNDARY CONDITIONS FOR A UNIT CELL	526
14.4.1. Symmetry of Unit Cell	526
14.4.2. MI Sym/Ant Fields for a Symmetric Unit Cell	527
14.4.3. Surface Data for MI Sym/Ant Set of Periodic Fields in a Symmetric Unit Cell	529
14.4.4. Homogeneous Fields	531
14.5. FOURIER SERIES EXPANSION OF MI SYM/ANT SET OF PERIODIC FIELDS	532
14.5.1. MI Sym/Ant Decomposition of Governing Field Equations	532
14.5.2. Isotropic Equivalent Homogeneous Solid	535
14.6. APPLICATION OF HASHIN-SHTRIKMAN VARIATIONAL PRINCIPLE	537

14.6.1. Inner Product of Stress and Strain	537
14.6.2. Application of MI Sym/Ant Decomposition to Energy Functional	538
14.6.3. Application of MI Sym/Ant Decomposition to Quadratic Forms	540
14.6.4. Two-Phase Periodic Structure	543
14.7. REFERENCES	546
APPENDIX A APPLICATION TO INELASTIC HETEROGENEOUS SOLIDS	547
A.1. SOURCES OF INELASTICITY	547
A.2. RATE-INDEPENDENT PHENOMENOLOGICAL PLASTICITY	548
A.2.1. Constitutive Relations: Smooth Yield Surface	549
A.2.2. Flow Potential and Associative Flow Rule	550
A.2.3. The J_2 -Flow Theory with Isotropic Hardening	551
A.2.4. The J_2 -Flow Theory with Kinematic Hardening	552
A.2.5. The J_2 -Flow Theory with Dilatancy and Pressure Sensitivity	553
A.2.6. Constitutive Relations: Yield Vertex	554
A.2.7. Crystal Plasticity	556
A.2.8. Aggregate Properties	557
A.3. RATE-DEPENDENT THEORIES	558
A.3.1. Rate Dependent J_2 -Plasticity	559
A.3.2. Empirical Models	559
A.3.3. Physically-based Models	560
A.3.4. Drag-controlled Plastic Flow	563
A.3.5. Viscoplastic J_2 -Flow Theory	566
A.3.6. Nonlinear Viscoplastic Model	566
A.3.7. Rate-Dependent Crystal Plasticity	567
A.4. REFERENCES	568
APPENDIX B HOMOGENIZATION THEORY	573
B.1. SUMMARY OF AVERAGE FIELD THEORY	573
B.2. SUMMARY OF HOMOGENIZATION THEORY	575
B.3. EXTENSION OF HOMOGENIZATION THEORY	578
B.4. EFFECT OF STRAIN GRADIENT	580
B.5. REFERENCES	584
APPENDIX C UNIFORM FIELD THEORY	587
C.1. APPLICATION OF UNIFORM FIELD THEORY TO THERMOELASTICITY OF HETEROGENEOUS SOLIDS	587
C.2. VERIFICATION OF AVERAGE FIELD THEORY	589
C.3. APPLICATION OF UNIFORM FIELD THEORY TO COMPOSITES WITH ALIGNED FIBERS	592
C.4. REFERENCES	594

APPENDIX D IMPROVABLE BOUNDS ON OVERALL PROPERTIES OF HETEROGENEOUS FINITE SOLIDS	595
D.1. BOUNDS ON POTENTIALS FOR GENERAL BOUNDARY DATA	595
D.1.1. Weak Kinematical or Statistical Admissibility	595
D.1.2. Bounds on Potentials	597
D.1.3. Calculation of Bounds on Overall Potentials	599
D.1.4. Bounds by Discretization	602
D.2. LINEAR COMPOSITES	602
D.2.1. Examples of Closed-form Bounds	604
D.3. REFERENCES	611
