1	Tensor Component and Matrix Notations	1
2	Anisotropic Elastic Solids	11
2.1	Elastic Strain Energy Density	11
2.2	Material Symmetries	14
2.2.1	Elements of Material Symmetry	14
2.2.2	Triclinic Materials	17
2.2.3	Monoclinic Materials	17
2.2.4	Orthotropic Materials	19
2.2.5	Trigonal and Tetragonal Materials	20
2.2.6	Transversely Isotropic or Hexagonal Materials	21
2.2.7	Cubic Materials	22
2.2.8	Isotropic Materials	23
2.2.9	Decomposition of Isotropic Tensors and Matrices	25
2.2.10	Orientation Average of a Fourth-Order Tensor	26
2.3	Transversely Isotropic Composite Materials	27
2.3.1	Engineering and Hill's Moduli	27
2.3.2	Walpole's Notation	30
2.4	Cylindrically Orthotropic Materials	32
2.5	Young's Modulus, Shear Modulus and Poisson's Ratio	33
3	Elementary Concepts and Tools	35
3.1	Aggregates and Constituent Phases	35
3.2	Heterogeneous Microstructures	36
3.2.1	Simple Descriptors	37
3.2.2	Statistical Homogeneity and Material Symmetry	38
3.2.3	Specific Surface	39
3.2.4	Two-Point Probability Function	40
3.3	Representative Volume	42
3.3.1	Size Requirements	42
3.3.2	Local Volume Fraction Fluctuations	44
3.4	Stress and Strain Field Averages	46

3.5	Overall Properties and Local Fields.....	48
3.5.1	Mechanical Influence Functions and Concentration Factors	48
3.5.2	Overall Stiffness and Compliance.....	50
3.6	Phase Transformations.....	52
3.6.1	Eigenstrains and Eigenstresses	52
3.6.2	Local Transformation Fields	55
3.6.3	Overall Response	58
3.7	Work, Energy and Reciprocal Theorems	59
3.7.1	Clapeyron and Virtual Work Theorems.....	59
3.7.2	Minimum Potential and Complementary Energy Theorems	61
3.7.3	The Reciprocal Theorem	64
3.8	The Levin Formula and the Hill Lemma.....	65
3.9	Universal Connections for Elastic Moduli of Fibrous Composites	70
3.9.1	Hill's Universal Connections for Transversely Isotropic Composites	71
3.9.2	Universal Connections for Monoclinic Systems Based on Uniform Fields	72
3.10	Constitutive Relations and Local Fields in Heterogeneous Aggregates	75
3.10.1	Overall Strain ϵ^0 and Phase Eigenstrains μ_r are Prescribed	75
3.10.2	Overall Stress σ^0 and Phase Eigenstresses λ_r are Prescribed	76
4	Inclusions, Inhomogeneities and Cavities	79
4.1	Homogeneous Ellipsoidal Inclusions: The Eshelby Solution	80
4.1.1	A Transformed Homogeneous Inclusion	80
4.1.2	Local Fields in Ellipsoidal Inclusions	81
4.2	Ellipsoidal Inhomogeneities: The Equivalent Inclusion Method	83
4.3	Transformed Inhomogeneities.....	87
4.3.1	Method of Uniform Fields.....	87
4.3.2	The Equivalent Inclusion Method.....	90
4.3.3	Contrasting Mechanical and Transformation Strains	92
4.3.4	Imperfectly Bonded Inhomogeneities and Cavities	93
4.4	Dilute Approximation of Overall Properties and Local Fields ...	96
4.4.1	Overall Strain ϵ^0 and Phase Eigenstrains μ_1 , μ_r Are Prescribed	96
4.4.2	Overall Stress σ^0 and Phase Eigenstresses λ_1 , λ_r Are Prescribed.....	97
4.4.3	Debonded Inhomogeneities Creating Traction-Free Cavities	99

4.4.4	Applications to Particulate Suspensions and Porous Media	100
4.5	Green's Function and Eshelby's Tensor in Elastic Solids	104
4.5.1	Introduction	104
4.5.2	Green's Function and Its First Derivative.....	105
4.5.3	The Inclusion Problem.....	108
4.5.4	The Tanaka-Mori Theorem for Exterior Fields.....	112
4.5.5	Shape-Independent Relations	114
4.6	Coefficients of P Matrices for Selected Ellipsoidal Shapes.....	116
4.6.1	Sources and Notation	116
4.6.2	A Spherical Inclusion in an Isotropic Solid.....	117
4.6.3	An Elliptical Cylinder in a Transversely Isotropic Solid	118
4.6.4	A Slit Crack and Flat Disc in an Orthotropic Solid	118
4.6.5	Spheroids in an Isotropic Solid.....	119
4.7	Summary of Principal Results.....	120
4.7.1	Homogeneous Ellipsoidal Inclusions	121
4.7.2	Inhomogeneities and Cavities of Ellipsoidal Shape	121
4.7.3	Multiphase Aggregate with Dilute Reinforcements L_r in Matrix L_1	123
5	Energies of Inhomogeneities, Dilute Reinforcements and Cracks	125
5.1	Energy Changes Caused by Mechanical Loads	126
5.1.1	Uniform Overall Strain Is Applied.....	126
5.1.2	Uniform Overall Stress Is Applied.....	128
5.1.3	Energy Based Evaluation of Overall Stiffness and Compliance of Dilute Mixtures	129
5.1.4	Energy Released by Complete Decohesion of a Part of Dilute Reinforcement.....	130
5.2	Energy Changes Caused by Uniform Phase Eigenstrains.....	133
5.3	Energy Changes Caused by Mechanical Loads and Phase Eigenstrains	135
5.3.1	The Load Set $\{\epsilon^0, \mu_1, \mu_r\}$	135
5.3.2	The Load Set $\{\sigma^0, \lambda_r, \lambda_1\}$	138
5.4	Energy Changes Caused by Cracks	140
5.4.1	Aligned Slit Cracks in an Orthotropic Solid.....	141
5.4.2	Aligned Penny-Shaped Cracks in a Transversely Isotropic Solid.....	143
6	Evaluations and Bounds on Elastic Moduli of Heterogeneous Materials	145
6.1	Elementary Energy Bounds	146
6.2	Hashin-Shtrikman and Walpole Bounds on Overall Elastic Moduli.....	147
6.2.1	Overall Strain ϵ^0 is Prescribed	148
6.2.2	Overall Stress σ^0 is Prescribed	152

6.3	Evaluation of H-S Bounds for Ellipsoidal Inhomogeneities	154
6.3.1	Local Field and Overall Elastic Moduli of Multiphase Systems	154
6.3.2	H-S Bounds on Overall Elastic Moduli of Multiphase Systems	159
6.3.3	H-S Bounds on Elastic Moduli of Two-Phase Systems	160
6.4	Composite Element Assemblage Bounds	163
6.4.1	Bounds on Elastic Moduli of Aligned Fiber Composites	164
6.4.2	Application to a Carbon/Copper Composite	167
6.5	The Generalized Self-consistent Method	168
6.5.1	Shear Modulus of a Two-Phase Particulate Composite	170
6.5.2	Transverse Shear Modulus of a Two-Phase Aligned Fiber Composite	174
7	Estimates of Mechanical Properties of Composite Materials	177
7.1	The Self-consistent Method (SCM)	178
7.1.1	Estimates of Overall Elastic Moduli	178
7.1.2	Elastic Moduli of Two-Phase Fiber Composites	180
7.1.3	Elastic Moduli of Two-Phase Particulate Composites	182
7.1.4	Restrictions on Constituent Shape and Alignment	183
7.2	The Mori-Tanaka Method (M-T)	184
7.2.1	Elastic Moduli and Local Fields of Multiphase Composites	185
7.2.2	Elastic Moduli of Fibrous, Particulate and Layered Composites	187
7.2.3	Elastic Moduli of Solids Containing Randomly Oriented Reinforcements and Cracks	189
7.2.4	Restrictions on Constituent Shape and Alignment	192
7.2.5	Derivation of Effective Phase Moduli	194
7.3	The Differential Scheme	195
7.4	The Double Inclusion and Double Inhomogeneity Models	198
7.4.1	Field Averages in a Double Inhomogeneity	198
7.4.2	Double Inhomogeneity Microstructures	201
7.4.3	Connections with the Self-consistent and Mori-Tanaka Estimates	204
7.4.4	Multiphase Composites with Different Constituent Shapes and Alignments	207
7.4.5	Composites Containing Distributed Voids or Cracks	209
7.4.6	Predictive Reliability of Micromechanical Methods ...	211
7.5	Applications of SCM and M-T to Functionally Graded Materials	212
7.5.1	Discrete and Layered Models of Graded Microstructures	213

7.5.2	Selected Comparisons of Discrete and Homogenized Models	217
8	Transformation Fields.....	221
8.1	Uniform Change of Temperature in Two-Phase Composites and Polycrystals	222
8.1.1	Thermal Strain Vectors of Anisotropic Solids	223
8.1.2	Composites of Two Isotropic Phases.....	224
8.1.3	Polycrystals	226
8.1.4	Aligned Fiber Composites.....	228
8.1.5	Adjustable Uniform Fields in Fiber Composites	230
8.1.6	Coated Fiber Composites.....	233
8.2	Transformation Influence Functions and Concentration Factors	235
8.2.1	Local and Overall Residual Fields	235
8.2.2	Overall Strain ϵ^0 and Phase Eigenstrains μ_r Are Prescribed.....	238
8.2.3	Overall Stress σ^0 and Phase Eigenstresses λ_r Are Applied	241
8.2.4	Properties of the Transformation Influence Functions	243
8.3	Uniform Change in Temperature in Multiphase Systems	246
8.3.1	Overall and Local Field Averages.....	246
8.3.2	Temperature Dependent Phase Properties	250
8.4	Capabilities of Bounds and Estimates of Overall and Local Fields.....	252
8.5	Related Research Activities	256
9	Interfaces and Interphases	259
9.1	Perfectly Bonded Interfaces	260
9.1.1	Decomposition of Stress and Strain Tensors Relative to a Plane	260
9.1.2	Decomposition of Stress and Strain Tensors Relative to a Surface	263
9.1.3	Interface Fields at Anisotropic Ellipsoidal Inhomogeneities and Cavities	268
9.1.4	Interface Fields at Isotropic Inhomogeneities and Cavities	270
9.1.5	Evaluation of Interface Stresses in a S-Glass/Epoxy Composite.....	271
9.2	Imperfectly Bonded Inhomogeneities and Cavities	275
9.2.1	Interface Traction and Displacements	276
9.2.2	Needleman's Imperfect Interface Models	277
9.2.3	Overall Response	280
9.3	Interphases	282
9.3.1	Thin Interphases with Assigned Properties	282
9.3.2	Interphase Regimes in Polymer Nanocomposites	285
