ELSEVIER Amsterdam • Boston • Heidelberg • London • New York • Oxford
Paris • San Diego • San Francisco • Singapore • Sydney • Tokyo

- The author of Chapter 10.4 is very grateful to Professor James P. Ferris for his helpful comments.
- The author of Chapter 11 expresses heartfelt thanks and appreciation to his students and colleagues and to many others outside his group who made so many significant intellectual contributions to understanding the chemistry of Fe in clay minerals. He feels privileged to consider each of these as his valued friend and respected colleague.
- The work presented in Chapter 13.2 was supported by a Discovery Grant of the Natural Sciences and Engineering Research Council of Canada (NSERC).
- The authors of Chapter 13.3 are indebted to the CICYT, Spain, for financial support (project MAT2012-31759).

Preface to the First Edition	xxv
Preface to the Second Edition	xxix

1. General Introduction: Clays, Clay Minerals, and Clay Science	1
<i>F. Bergaya and G. Lagaly</i>	
1.1. Aim and Scope	2
1.2. Clay	3
1.3. Clay Mineral	5
1.4. Distinction Between Clay and Clay Mineral	7
1.5. Clay Mineral Properties	9
1.6. Delamination and Exfoliation of Clay Mineral Particles	10
1.7. Associated Minerals	10
1.8. Associated Phases	10
1.9. Other Solids with Similar Properties	11
1.10. Clay Mineral Particles and Aggregates	12
1.11. Clay Minerals and Environment	12
1.12. Alternative Concepts of Clay Minerals	12
1.13. Clay Science	14
1.14. Concluding Remarks	15
References	17
2. Structure and Mineralogy of Clay Minerals	21
<i>M.F. Brigatti, E. Galan, and B.K.G. Theng</i>	
2.1. General Information	21
2.2. Layer Charge (X)	25
2.3. Polytypism	26
2.4. Mixed-Layer Structures	27
2.5. The 1:1 Clay Minerals	29
2.5.1. Dioctahedral 1:1 Minerals: The Kaolin Group	29
2.5.2. Trioctahedral 1:1 Clay Minerals: The Serpentine Group	35
2.6. The 2:1 Clay Minerals	37
2.6.1. Pyrophyllite, Talc, and Related Minerals	38
2.6.2. True and Brittle Micas	39
2.6.3. Smectites	42

2.6.4. Illite-Smectite, Chlorite-Smectite, and Other Mixed-Layer Clay Minerals Between Dioctahedral Non-expandable and Expandable 2:1 Layers	45
2.6.5. Vermiculite	48
2.6.6. Chlorite	48
2.7. Allophane and Imogolite	51
2.8. Palygorskite and Sepiolite	57
References	68
3. Genesis of Clay Minerals	83
<i>E. Galán and R.E. Ferrell</i>	
3.1. Geological Environments for Clay Mineral Formation	84
3.1.1. Weathering	84
3.1.2. Erosion, Transportation, Deposition	92
3.1.3. Burial Diagenesis and Low-Grade Metamorphism	97
3.1.4. Hydrothermal Alteration	105
3.1.5. Extraterrestrial Impactites and Martian Clays	108
3.2. Investigative Methods	109
3.2.1. Multivariate Statistics and Trace Element Geochemistry	110
3.2.2. Isotope Geochemistry	111
3.3. Origin of Clay Deposits of Economic Interest	112
References	114
4. Radiation Effects on Clay Minerals	127
<i>T. Allard, E. Balan, and G. Calas</i>	
4.1. Introduction	127
4.2. Radiation-Induced Point Defects in Clay Minerals	128
4.2.1. Nature and Stability	128
4.2.2. Production, Growth Curves, and Dose Rate	131
4.3. Radiation-Induced Amorphization in Clay Minerals	133
4.4. Examples of Application	134
4.4.1. Radiation-Induced Defects as Tracers of Radioactivity	134
4.4.2. Amorphization of Smectite	134
4.5. Conclusion	135
References	135
5. Surface and Interface Chemistry of Clay Minerals	139
<i>R.A. Schoonheydt and C.T. Johnston</i>	
5.1. Introduction	139
5.2. Surface Atoms	140
5.3. Surface Structures and Properties	142
5.3.1. Siloxane Surface with Permanent Charge	142
5.3.2. Neutral Siloxane Surface	144
5.3.3. Hydroxyl Surface	145

5.4. Clay-Water Interactions	148
5.5. Clay Mineral-Dye Complexes in Aqueous Clay Mineral Dispersion	150
5.5.1. Monomers	151
5.5.2. Aggregates	152
5.6. TMI Complexes at Clay Mineral Surfaces	154
5.6.1. Planar Surfaces Prefer Planar Complexes	154
5.6.2. Chiral Clay Minerals	155
5.7. Proteins on Clay Mineral Surfaces	157
5.8. Clay Mineral Films	159
5.8.1. LbL Films	160
5.8.2. LB Films	160
5.9. Perspectives	164
References	165
6. Thermodynamics of Clay Minerals	173
<i>P. Blanc, P. Vieillard, H. Gailhanou, and S. Gaboreau</i>	
6.1. General Thermodynamic Relations	175
6.1.1. Formation and Reaction Thermodynamic Properties	175
6.1.2. Can Thermodynamics Be Applied to Clay Minerals?	176
6.1.3. Hydration and Cation Exchange Reactions: Main Theoretical Principles and Classical Views	178
6.2. Thermodynamic Properties Obtained by Calorimetric Measurements	181
6.2.1. Performing Calorimetric Measurements on Clay Minerals	181
6.2.2. Calorimetric Measurements on Clay Minerals from Literature Data	185
6.3. Thermodynamic Properties from Aqueous Equilibria	185
6.3.1. The Mass Action Law Applied to Clay Minerals	185
6.3.2. Attainment of Equilibrium and the Incongruent Dissolution of Kaolinite	188
6.4. Thermodynamic Properties from High-Temperature and High-Pressure Equilibria	190
6.5. Estimation Methods	191
6.6. Clay Minerals and the Thermodynamics of Hydration	192
6.6.1. Models for Deriving the Thermodynamic Properties of Hydration from Experiments	193
6.6.2. Generalization of the Hydration Reaction: Solid Solution Models	195
6.6.3. Hydration of Wyoming Smectite Using an Asymmetrical Solid Solution	197
6.7. A Tentative Synthesis of the Exchange, the Formation, and the Hydration Properties of Clay Minerals	198
6.8. Conclusions and Perspectives	203
References	204

7. Introduction to Pure Clay Minerals	211
<i>F. Bergaya and G. Lagaly</i>	
7.1. Purification of Natural Clays	213
<i>F. Bergaya and G. Lagaly</i>	
7.1.1. Purification Procedures	214
7.1.1.1. Decomposition of Carbonates	215
7.1.1.2. Dissolution of (Hydr)Oxides	215
7.1.1.3. Oxidation of Organic Materials	216
7.1.1.4. Dissolution of Silica	217
7.1.2. Removal of Remaining Salt by Dialysis and Fractionation	217
7.1.3. A Simplified 'Gentle' Purification Method	218
7.1.3.1. Na ⁺ Exchange	218
7.1.3.2. Washing	218
7.1.4. A Pilot Purification Technique	219
7.1.5. Conclusions	219
References	219
7.2. Synthesis of Clay Minerals	223
<i>M. Jaber, S. Komarneni, and C.-H. Zhou</i>	
7.2.1. Why Synthetic Clay Minerals?	223
7.2.2. Typical Synthetic Clay Minerals	224
7.2.2.1. Kaolinites Synthesis	224
7.2.2.2. Smectite Synthesis	225
7.2.2.3. One-Step Synthesis of Layered Ht–Organic Hybrid Materials	232
7.2.2.4. Chlorite Synthesis	233
7.2.3. A Smart Route to a Direct Functionalization of Clay Minerals—Organoclays	234
7.2.4. Concluding Remarks	236
References	236
8. Colloid Clay Science	243
<i>G. Lagaly and I. Dékány</i>	
8.1. Clay Mineral Particles	244
8.1.1. Particle and Aggregate Structure	244
8.1.2. Layer and Edge Charges	245
8.2. Clay Minerals in Water	249
8.2.1. Hydrates of 2:1 Clay Minerals	249
8.2.2. Structure of the Hydrates	251
8.2.3. Colloidal Dispersions	253
8.2.4. Electro-kinetic Properties	255
8.3. Preparation of Colloidal Dispersions	258
8.3.1. Fractionation of Clay Dispersions	258

8.3.2. Dispersions of Kaolins	262
8.3.3. Dispersions of Smectites and Vermiculites	262
8.3.4. H ⁺ -Saturated Smectites	264
8.3.5. Determination of Particle Size and Shape in Colloidal Clay Dispersions	264
8.4. Coagulation of Colloidal Clay Mineral Dispersions and Mechanisms of Coagulation	266
8.4.1. Coagulation by Inorganic Salts	266
8.4.2. Coagulation of Mixed Clay Mineral Dispersions	274
8.4.3. Influence of Alcohols	278
8.4.4. Influence of Surface-Active Agents on Salt Coagulation	278
8.4.5. Stabilization by Betaines	279
8.4.6. Coagulation by Organic Cations	281
8.4.7. Coagulation by Acids	284
8.4.8. Influence of Poly(Hydroxo Metal) Cations	284
8.4.9. Clay Mineral–Oxide Interactions	286
8.4.10. Calculation of Interaction Energies	289
8.5. Flocculation and Stabilization by Polymers	295
8.5.1. Flocculation Mechanisms	295
8.5.2. Steric Stabilization	300
8.5.3. Peptization (Deflocculation)	302
8.6. Aggregation of Clay Mineral Particles and Gelation	303
8.6.1. Modes of Aggregation	303
8.6.2. Plasticity	309
8.6.3. Sedimentation and Filtration	311
8.6.4. Sol–Gel Transition	316
8.6.5. Thixotropy	321
8.6.6. Hydrogels of Organoclays	322
8.6.7. Gelation in Organic Solvents	323
8.7. Clay Mineral Hybrid Films	324
8.8. Formation of Nanoparticles in Clay Minerals	325
References	328
9. Mechanical Properties of Clays and Clay Minerals	347
<i>J.-F. Wagner</i>	
9.1. Clays in Civil Engineering	347
9.2. Mechanical and Hydraulic Properties of Clays	349
9.2.1. Consistency and Plasticity	349
9.2.2. Shear Strength and Thixotropy	354
9.2.3. Compaction, Consolidation and Settlement	360
9.2.4. Swelling and Shrinkage	366
9.2.5. Permeability	369
9.3. Clays with Problematic Soil Mechanical Behaviour	374
9.3.1. Expansive or Swelling Soils	374
9.3.2. Quick Clays	376
9.3.3. Black Shales	377
References	378

10.0. Introduction on Modified Clays and Clay Minerals	383
<i>F. Bergaya and G. Lagaly</i>	
10.1. Acid Activation of Clay Minerals	385
<i>P. Komadel and J. Madejová</i>	
10.1.1. Methods of Investigation	386
10.1.2. H ⁺ -Exchanged Clay Minerals	387
10.1.3. Acid Dissolution of Smectites	389
10.1.4. Acid Dissolution of Organo-Smectites	393
10.1.5. Properties of Acid-Activated Smectites	395
10.1.5.1. Layer Charge	395
10.1.5.2. Specific Surface Area	395
10.1.5.3. Porous Structure	396
10.1.5.4. Catalytic Properties	398
10.1.6. Acid Dissolution of Non-swelling Clay Minerals	400
10.1.6.1. Kaolinite and Metakaolinite	401
10.1.6.2. Sepiolite and Palygorskite	402
10.1.7. Conclusion	403
References	403
10.2. Thermally Modified Clay Minerals	411
<i>L. Heller-Kallai</i>	
10.2.1. Freezing of Clay Minerals	413
10.2.1.1. Effect of Freeze-Drying on the Texture of Clay Minerals	413
10.2.1.2. Changes in Acidity	414
10.2.1.3. Changes in Mechanical and Rheological Properties	414
10.2.2. Dehydration of Clay Minerals	414
10.2.2.1. Changes in Porosity	415
10.2.2.2. De- and Re-adsorption of Water	418
10.2.2.3. Changes in Surface Acidity on Dehydration	418
10.2.2.4. The Hofmann-Klemen Effect	420
10.2.3. Dehydroxylated Phases	421
10.2.3.1. Kaolinite Group Minerals	421
10.2.3.2. Serpentine	425
10.2.3.3. TOT Minerals	425
10.2.4. High-Temperature Phases	426
References	427
10.3. Clay Mineral–Organic Interactions	435
<i>G. Lagaly, M. Ogawa, and I. Dékány</i>	
10.3.1. Intercalation Reactions of Kaolinites	437
10.3.1.1. Type of Guest Compounds	437

10.3.1.2. Mechanism of Intercalation	438
10.3.1.3. Structure of Intercalates	441
10.3.1.4. Displacement Reactions	442
10.3.1.5. Entraining Reactions	443
10.3.1.6. Intercalation of Alkali Halogenides	443
10.3.1.7. Grafting Reactions	443
10.3.1.8. Differentiation of Kaolinites	444
10.3.2. Reactions of 2:1 Clay Minerals	445
10.3.3. Alkylammonium Derivatives	454
10.3.4. Interactions with Cationic Dyes	458
10.3.4.1. Aggregation of the Adsorbed Dye Molecules	458
10.3.4.2. Orientation of Intercalated Dye Molecules	460
10.3.5. Reaction with Cationic Complexes	462
10.3.6. Adsorptive Properties of Alkylammonium Clay Minerals	464
10.3.7. Adsorption from Binary Solutions and the Hydrophilic/Hydrophobic Character of Clay Mineral Surfaces	467
10.3.7.1. Adsorption Excess Isotherms	468
10.3.7.2. Heat of Wetting	469
10.3.7.3. Examples	469
10.3.8. Phase Transitions	474
10.3.9. Intercalation of Polymers and Proteins	476

15.1.5. Synthesis of Clay Minerals	824
15.1.6. Pioneering Applications	825
15.2. Names, First Locality, and Structural Identification	827
15.3. History of Clay Meetings	832
15.4. Teaching Clay Science	835
15.4.1. General	835
15.4.2. Teaching Clay Science	838
15.4.3. Comments on the Scene in the United States and other Industrialized Nations	845
15.5. Conclusions	846
15.6. The Word of the End	847
References	847
Index	857

Energy, Office of Basic Energy Sciences. Sandia National Laboratories is a multiprogram laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.

- The research of Chapter 5.2 was supported by Grant G-641.106.8/1999 from G.I.F., the German–Israeli Foundation for Research and Development.

Preface to the Second Edition	xxvii
1. Introduction to Clay Science: Techniques and Applications	1
<i>F. Bergaya and G. Lagaly</i>	
1.1 Clay and Clay Mineral	2
1.2 Delamination/Exfoliation and Particle/Aggregate Arrangements	5
1.3 Clay Science	5
References	6
2.0. Critical Assessment of Analytical Techniques of Clays and Clay Minerals	9
<i>F. Bergaya and G. Lagaly</i>	
2.1. Mössbauer Spectroscopy	11
<i>E. Murad</i>	
2.1.1 Historical Background	11
2.1.2 Basic Principles	12
2.1.3 Mössbauer Spectra of Selected Clay Minerals	13
2.1.4 Mössbauer Spectra of Iron (Hydr)Oxides	16
2.1.5 Mössbauer Spectra of Fired Clay Minerals	20
2.1.6 Mössbauer Spectroscopy on Mars	22
References	23
2.2. Identification and Quantitative Analysis of Clay Minerals	25
<i>J. Środoń</i>	
2.2.1 Identification Techniques	26
2.2.1.1 Sample Size	26
2.2.1.2 Clay Mineral Separation	26
2.2.1.3 Sample Preparation	29
2.2.1.4 Pure Versus Mixed-Layer Clay Minerals	30
2.2.1.5 Identification of Pure Clay Minerals	31

2.2.2 Identification of Mixed-Layer Clay Minerals	38
2.2.2.1 Peak Position Approach	38
2.2.2.2 Peak-Broadening Approach	39
2.2.2.3 Expert Systems	40
2.2.2.4 Integrated Approach: Computer Modelling	41
2.2.3 Quantitative Analysis	42
2.2.3.1 Bulk Rock Quantitative Mineral Analysis	42
2.2.3.2 Quantitative Mineral Analysis of the Clay Fraction	45
References	46
2.3. X-ray Identification of Mixed-Layer Structures. Modelling of Diffraction Effects	51
<i>B.A. Sakharov and B. Lanson</i>	
2.3.1 Diffraction Investigation of Mixed-Layer Structures	54
2.3.1.1 Diffraction Fundamentals	54
2.3.1.2 Calculation of Diffraction Effects from Mixed-Layer Structures	56
2.3.2 Statistical Description of Layer Stacking in Mixed-Layer Structures	64
2.3.2.1 Occurrence Probability of Any Layer Sequence	64
2.3.2.2 Determination of Independent Probability Parameters	67
2.3.3 Calculation of the Intensity Diffracted by Mixed-Layer Structures: The Matrix Formalism	80
2.3.3.1 Mixed-Layer Structures with $S=1$ or $S=0$, and $T=2$	81
2.3.3.2 Mixed-Layer Structures with $S=1$ and $T=3$	82
2.3.3.3 Mixed-Layer Structures with $S=2$ and $T=2$	83
2.3.3.4 Mixed-Layer Structures with $S=2$ and $T=3$	84
2.3.3.5 Mixed-Layer Structures with $S \geq 3$ and $T \geq 2$	85
2.3.3.6 Periodic Structures ($T=1$)	86
2.3.4 Intensity Diffracted by a Powder of Crystals with Contrasting Numbers of Layers	86
2.3.4.1 Lognormal Distributions of Crystal Thickness	87
2.3.4.2 Ergun's Model	88
2.3.5 Influence of Small Variations of Layer Thickness (Layer-to-Layer Distance)	89
2.3.5.1 Defects of the First Type	90
2.3.5.2 Defects of the Second Type	91
2.3.6 Influence of the Outer Surface Layers of Crystals	92
2.3.6.1 Model I: Occurrence and Junction Probabilities of OSL are Identical to Those of the Core Layers	94
2.3.6.2 Model II: Occurrence Probabilities of OSL Depend on the Nature of the Previous Layer	96
2.3.6.3 Model III: Systematic Occurrence of a Given OSL Type at a Given End of the Crystals	96
2.3.7 Influence of Inter-Crystalline Defects: Megacrystals	97
2.3.7.1 Model I (Plançon, 2002)	97
2.3.7.2 Model II (Sakharov, 2005)	99

2.3.8 Diffraction by a Powder Sample	104
2.3.8.1 Effect of the Crystal Partial Orientation	107
2.3.8.2 Sample Absorption	108
2.3.8.3 Beam Overflow	110
2.3.8.4 Polarization of the Diffracted X-ray Beam	111
2.3.8.5 Lorentz Factor	111
2.3.8.6 Intensity Scaling	112
2.3.9 Conclusion	113
Appendix. Influence of Various Adjustable Parameters on XRD Patterns Calculated for Mixed-Layer Structures	117
A1. XRD Patterns Calculated for two-Component Mixed-Layer Structures with Contrasting Junction Probabilities	117
A2. XRD Patterns Calculated for Multi-Component Mixed-Layer Structures	123
A3. XRD Patterns Calculated for Mixed-Layer Structures with Different Types of Defects	125
References	129
2.4. X-ray Absorption Spectroscopy	137
<i>W.P. Gates</i>	
2.4.1 Advances in Synchrotron-Based XAS Techniques	137
2.4.1.1 Scanning Transmission X-ray Microscopy	138
2.4.1.2 STXM X-ray Magnetic Circular Dichroism	145
2.4.1.3 Pre-Edge XAS and XANES (NEXAFS) Spectroscopy	145
2.4.1.4 Powder EXAFS Spectroscopy	146
2.4.2 Recent Applications to Clays and Clay Minerals	148
2.4.2.1 Octahedral and Tetrahedral Fe Distributions in Smectites	148
2.4.2.2 XAFS Studies of Reactivity of Clays and Clay Minerals	149
2.4.2.3 XAFS Studies of Oxides and (Hydr)Oxides	149
2.4.3 Future Outlook and Concluding Remarks	153
References	153
2.5. X-Ray Photoelectron Spectroscopy	161
<i>H. Seyama, M. Soma, and B.K.G. Theng</i>	
2.5.1 Principles of XPS	162
2.5.2 Experimental Techniques	163
2.5.2.1 Instrumentation and Sample Handling	163
2.5.2.2 Quantitative Analysis	165
2.5.2.3 Chemical Information	166
2.5.2.4 Imaging	168
2.5.3 Applications	171
References	174

2.6. Small-Angle Scattering Techniques	177
<i>N. Cohaut and D. Tchoubar</i>	
2.6.1 Principles	178
2.6.1.1 Scattering Length and Particle Scattering Length Contrast	179
2.6.1.2 Quantitative Definitions of the Interference Function $P(q)$	180
2.6.1.3 The Particular Case for Clay Minerals: Definitions	184
2.6.2 Hydration and Sol-Gel Transition (SGT)	185
2.6.2.1 Initial Hydration Stages and Osmotic Transition	186
2.6.2.2 Anomalous Small-Angle X-ray Scattering	190
2.6.2.3 Gel Structure and SGT	191
2.6.2.4 Modelling SGT in Laponite Dispersions	200
2.6.3 Organoclay Dispersion in Organic Solvent and Polymer Nanocomposites	203
2.6.3.1 Dispersions in Organic Solvents	203
2.6.3.2 Clay-Polymer Nanocomposites (CPN)	206
2.6.4 Conclusions	207
References	208
 2.7. Fourier Transform Infrared Spectroscopy	 213
<i>S. Petit and J. Madejova</i>	
2.7.1 Principle and Methods	213
2.7.2 Mineralogical Applications	215
2.7.3 Crystallo-Chemical Applications	216
2.7.3.1 The Octahedral Environment	216
2.7.3.2 The Tetrahedral Environment	218
2.7.3.3 The Interlayer Cations	219
2.7.4 Interactions with Clay Minerals	220
2.7.4.1 Clay Mineral-Water Interactions	220
2.7.4.2 Clay Mineral-Organic Interactions and Organoclays	222
2.7.5 Conclusions	225
References	225
 2.8. Nuclear Magnetic Resonance Spectroscopy	 233
<i>J. Sanz and D. Massiot</i>	
2.8.1 NMR Background	234
2.8.2 Experimental Methods	235
2.8.3 NMR Spectroscopy of Clay Minerals	238
2.8.3.1 Structural Characterization	239
2.8.3.2 Adsorption Phenomena: Clay-Water Interactions	250
2.8.4 Clay Mineral-Organic Interactions	255
2.8.4.1 Adsorption on 1:1 Clay Minerals	255
2.8.4.2 Adsorption on 2:1 Clay Minerals	256

2.8.4.3 Adsorption in Sepiolite	258
2.8.5 Reactivity of Clay Minerals	259
2.8.5.1 Thermal Activation of Kaolinites	259
2.8.5.2 Acid and Alkali Activation	259
2.8.5.3 Heterogeneous Catalysis	261
2.8.5.4 Grafting of Organic Species	267
2.8.6 Concluding Remarks	268
References	268
 2.9. Electron Microscopy	 275
<i>T. Kogure</i>	
2.9.1 Introduction	275
2.9.2 Scanning Electron Microscopy	278
2.9.2.1 Basic Principle of SEM	278
2.9.2.2 High-Resolution SEM Imaging of Clays	280
2.9.2.3 Other Functions in Modern SEM	287
2.9.3 Transmission Electron Microscopy	289
2.9.3.1 Basic Principles	289
2.9.3.2 High-Resolution Imaging of Clay Minerals	294
2.9.3.3 Chemical and Chemical State Analyses with TEM	308
2.9.3.4 Sample Preparation for TEM	310
References	315
 2.10. Surface Area and Porosity	 319
<i>L.J. Michot and F. Villieras</i>	
2.10.1 The Specific Surface Area of Clay Minerals	319
2.10.2 Swelling Clay Minerals	324
2.10.2.1 Adsorptives Inducing Swelling	324
2.10.2.2 Adsorptives not Inducing Swelling	328
References	329
 2.11. Cation and Anion Exchange	 333
<i>F. Bergaya, G. Lagaly, and M. Vayer</i>	
2.11.1 Origin of Ion Exchange Capacity (CEC and AEC)	334
2.11.2 Ion Exchange Reactions	335
2.11.2.1 Cation Exchange Equilibria	335
2.11.2.2 Anion Exchange Equilibria	343
2.11.3 CEC: Definition and Factors Influencing Its Measurement	344
2.11.3.1 Influence of Exchangeable and Index Cations	346
2.11.3.2 Influence of pH	346
2.11.4 Classical Exchange Techniques	347
2.11.4.1 Exchange with Protons	348

2.11.4.2 Exchange with Ammonium Ions	348
2.11.4.3 Exchange with Alkali or Alkaline-Earth Cations	349
2.11.4.4 Exchange with Organic Cations	349
2.11.4.5 Exchange with Transition-Metal Ions or Organometal Complexes	350
2.11.5 Other Techniques	350
2.11.6 Conclusions	351
References	351
2.12. Thermal Analysis	361
<i>F. Rouquerol, J. Rouquerol, and P. Llewellyn</i>	
2.12.1 Background and Development	361
2.12.2 Conventional Thermal Analysis	365
2.12.3 Sample-Controlled Thermal Analysis	367
2.12.4 Application of Conventional Thermal Analysis to Clays and Clay Minerals	370
2.12.5 Application of Sample-Controlled Thermal Analysis to Clays and Clay Minerals	372
2.12.5.1 Analytical Aspects of the Thermal Analysis of Clays and Clay Minerals	372
2.12.5.2 Preparative Aspects of the Thermal Analysis of Clays and Clay Minerals	375
2.12.5.3 Kinetic Aspects of the Thermal Analysis of Clays and Clay Minerals	376
References	378
2.13. Full Characterization of Smectites	381
<i>K. Emmerich</i>	
2.13.1 Introduction	382
2.13.1.1 Definition of Smectites with Respect to Chemical Composition and Structure	382
2.13.1.2 Definition of Smectites with Respect to Particle Size	386
2.13.2 Required Sample Amount for Characterization	386
2.13.3 Sample Pretreatment	387
2.13.4 Identification by X-Ray Diffraction	387
2.13.4.1 Information from Patterns of Powdered Samples	388
2.13.4.2 Information from Patterns of Textured Samples	388
2.13.5 Layer Charge Determination	389
2.13.6 Structural Formula and Charge Location	390
2.13.7 Structure of the Octahedral Sheet	391
2.13.8 Iron Content	392
2.13.9 Limits of Structural Properties and Index Tests	393
2.13.9.1 Layer Charge	393
2.13.9.2 Structure of Octahedral Sheet	394
2.13.9.3 Iron Content	394
2.13.9.4 Charge Location	395

2.13.10 Nomenclature and Classification of Smectites	395
2.13.11 Implications for Related Properties	396
References	399
3. Molecular Simulation of Clay Minerals	405
<i>J.A. Greathouse and R.T. Cygan</i>	
3.1 Introduction	405
3.2 Simulation Basics	407
3.3 Force Field Development	409
3.4 Applications	410
3.4.1 Clay Mineral Swelling	410
3.4.2 Interlayer Structure and Dynamics	411
3.4.3 Solute Adsorption	414
3.5 Concluding Remarks	419
References	420
4.1. Assessment of Industrial Clays	425
<i>G.E. Christidis</i>	
4.1.1 Introductory Remarks-Terminology	425
4.1.2 Physical Properties of Industrial Clays	427
4.1.2.1 Particle Size and Shape	427
4.1.2.2 Ion-Exchange Properties	428
4.1.2.3 Hydration and Swelling	429
4.1.2.4 Rheological Properties	430
4.1.2.5 Colour Properties	431
4.1.2.6 Plasticity	432
4.1.2.7 Organic Reactions	432
4.1.3 Assessment of Industrial Clays	434
4.1.4 Assessment of Kaolin Deposits	434
4.1.4.1 Next Stage of Kaolin Assessment	435
4.1.5 Assessment of Bentonites	437
4.1.5.1 Quality and Grade of the Bentonites	439
4.1.5.2 Factors Affecting Quality and Grade	440
4.1.5.3 Next Stage of Bentonite Assessment	440
4.1.6 Assessment of Palygorskite-Sepiolite Deposits	441
4.1.7 Assessment of Common Clays and Shales	442
4.1.7.1 Use of Time Temperature Transformation Diagrams for Assessment of Common Clays	443
References	444
4.2. Industrial Applications	451
<i>C.C. Harvey and G. Lagaly</i>	
4.2.1 Industrial Uses	453
4.2.1.1 Common Clays	453
4.2.1.2 Kaolins	453

4.2.1.3 Bentonites	457
4.2.1.4 Vermiculites and Micas	467
4.2.1.5 Talc and Pyrophyllite	468
4.2.1.6 Palygorskite and Sepiolite	468
4.2.1.7 Mixtures of Clay Types	468
4.2.2 Processing Industrial Clays	469
4.2.2.1 Purification and Fractionation	469
4.2.2.2 Processing of Kaolins	471
4.2.2.3 Raw and Activated Bentonites	471
4.2.3 Laboratory Evaluation of Clay Samples	478
4.2.4 Categorization of Clay Resources	478
4.2.4.1 Categories of Industrial Clays	479
4.2.4.2 Examples of Different Categories	479
4.2.4.3 Role of Categorization in Assessing Industrial Clay Resources	480
4.2.4.4 Relationship Between Category and Annual Tonnage	481
4.2.4.5 Relationship Between Category and Resource Confidence	481
4.2.4.6 Relationship Between Category and Value	481
4.2.4.7 Relationship Between Category and Pre-Investment Capital	482
4.2.4.8 Relationship Between Category and Investment Capital	482
4.2.5 The Resource Evaluation Process	482
4.2.6 Other Considerations	484
4.2.6.1 From Laboratory-Scale Testing to Major Plant Scale	484
4.2.6.2 Level of Applied Technology	484
4.2.6.3 Losses Associated with Applied Processing Steps	485
4.2.6.4 Time to Move from Commissioning to Full Production	485
4.2.6.5 Reducing Risk During Development	485
4.2.7 Conclusions	486
References	486
4.3. Clay Minerals as Catalysts	491
<i>R.W. McCabe and J.M. Adams</i>	
4.3.1 Origin of Activity	493
4.3.1.1 Low Dimensionality	493
4.3.1.2 Structural Characteristics Imparting Activity	493
4.3.1.3 Shape/Size Selectivity	494
4.3.1.4 Catalysis of Inorganic Reactions	495
4.3.1.5 Clays as Supports for Reagents and Co-Catalysts	496
4.3.2 Preparation/Activation of Clay Catalysts	496
4.3.3 Summary of Catalytic Activity	497
4.3.3.1 Brønsted Acid Catalysis	498
4.3.3.2 Lewis Acid Catalysis	505
4.3.3.3 Redox Reactions	505

4.3.3.4 Reactions Via Reactive Intermediates	511
4.3.3.5 Cycloaddition Reactions	512
4.3.3.6 Clays as Supports	512
4.3.3.7 Organoclays as Phase Transfer Agents	516
4.3.4 Significant Recent Developments	516
4.3.4.1 Supported Acids	516
4.3.4.2 Reactions Initiated by Microwave, Ultrasound or Gamma Irradiation	517
4.3.4.3 Clay Mineral Nanocomposites	519
4.3.4.4 Catalysis with Clay-Supported Ionic Liquids	519
4.3.4.5 Synthesis of 'Complex' Organic Molecules	521
4.3.5 Industrial Situation	521
4.3.6 Conclusions	521
References	522
4.4. Applications of Clay-Polymer Nanocomposites	539
<i>M. Galimberti, V.R. Cipolletti, and M. Coombs</i>	
4.4.1 Improvements of Polymer Properties by Clay Minerals	541
4.4.1.1 Structure of Clay Mineral Polymer Nanocomposites (CPN)	541
4.4.1.2 Clay Minerals for Better Mechanical Reinforcement	541
4.4.1.3 Clay Minerals for Improved Barrier Properties	548
4.4.1.4 Clay Minerals for Improved Thermal Properties, Heat Resistance, and Dimensional Stability	549
4.4.1.5 Clay Minerals for Improved Resistance to Degradation Properties	550
4.4.1.6 Clay Minerals for Improved Flame Resistance	550
4.4.1.7 Clay Minerals for Improved Chemical Resistance	551
4.4.1.8 Clay Mineral Additions for Rheological Applications	552
4.4.1.9 Clay Minerals as Blend Compatibilizer	553
4.4.1.10 Clay Minerals to Increase the Glass Transition Temperature (T_g)	553
4.4.1.11 Clay Minerals and Ionic Conductivity of Thermoplastic Polymers	553
4.4.1.12 Clay Minerals in Elastomers for Faster Curing and Higher Cross-linking Density	554
4.4.2 Master Batches and Concentrates in Thermoplastic Pellets	554
4.4.2.1 Nanocomposites Based on Polyolefins	554
4.4.2.2 Polyamide Nanocomposites	554
4.4.3 Application of CPN in the Automotive Field	555
4.4.3.1 CPN in Timing Belt Cover	557
4.4.3.2 CPN in Engine Cover	557
4.4.3.3 CPN in Step-assists, Doors, Centre Bridges, Sail Panels, and Box-rail Protectors	557
4.4.3.4 CPN in Seat Backs	558
4.4.3.5 CPN for Rear Floor	558

4.4.3.6 CPN in Tyres, Tyre Treads, Tyre Innerliners, and Tyre Curing Bladders	558
4.4.3.7 CPN in Base Compounds	564
4.4.3.8 CPN in Rubber Automotive Compounds other than Tyres	564
4.4.4 Applications of CPN in Sporting Goods	564
4.4.4.1 Barrier Coating Technology	565
4.4.4.2 Tennis Balls	565
4.4.4.3 Other Inflated Sport Balls and Rubber Tubes	566
4.4.4.4 Applications in Footwear	566
4.4.5 Applications of CPN in Packaging	566
4.4.6 Applications of CPN in Coatings	568
4.4.7 Application of CPN for Wire and Cables	569
4.4.8 Application of CPN for Biomedical Applications	569
4.4.9 Application of CPN for Fuel Cells	569
Appendix. Table of Polymers	570

<i>G.D. Yuan, B.K.G. Theng, G.J. Churchman, and W.P. Gates</i>	
5.1.1 Control of Heavy Metal Cations	591
5.1.1.1 Practical Applications	591
5.1.1.2 Mechanisms of Heavy Metal Ion Adsorption	592
5.1.1.3 Relative Affinities of Clay Minerals for Different Heavy Metal Ions	594
5.1.1.4 Ease of Displacement of Heavy Metal Ions from Clay Minerals	595
5.1.1.5 Clay Mineral Modification and Adsorption of Heavy Metal Ions	596
5.1.2 Control of Organic and Biological Cations	598
5.1.2.1 Practical Applications	598
5.1.2.2 Mechanisms of Uptake of Organic and Biological Cations by Clay Minerals	599
5.1.2.3 Ease of Displacement of Organic and Biological Cations	602
5.1.3 Control of Non-Ionic Organic Compounds	602
5.1.3.1 Uptake of NOC by Unmodified Clay Minerals	603
5.1.3.2 Uptake of NOC by Organically Modified Clay Minerals	604
5.1.3.3 Uptake of NOC from the Gas Phase by Organoclays	604
5.1.3.4 Uptake of NOC from Aqueous Solutions by Organoclays	606
5.1.3.5 Practical Applications of Organoclays for Control of NOC	607

5.1.3.6 Effect of Hydrocarbon Chain Length on Uptake of NOC by Organoclays	609
5.1.3.7 Demarcation Between Short-Chain and Long-Chain QAC	610
5.1.3.8 Influence of Water on Uptake of NOC by Organoclays	611
5.1.3.9 Cation Properties and Uptake of NOC by Short-Chain QAC-Clay Minerals	612
5.1.3.10 Nature of Exchangeable Cations and the Incorporation of Long-Chain QAC into Clay Minerals	613
5.1.3.11 Effect of Amount of Organic Cation on Uptake of NOC by Long-Chain QAC-Clay Minerals	613
5.1.3.12 Size of Organic Cation and Uptake of NOC by Long-Chain QAC-Clay Minerals	615
5.1.3.13 Co-Adsorption and Uptake of NOC by Long-Chain QAC-Clay Minerals	615
5.1.3.14 Binding Modes of Long-Chain QAC in Organoclays	616
5.1.3.15 Properties of NOC and their Uptake by Organoclays	616
5.1.3.16 Mechanisms of Uptake of NOC by Organoclays	618
5.1.3.17 NOC Uptake by Long-Chain QAC-Clay Minerals and Organic Matter	619
5.1.3.18 Alternatives to Complexing with QAC for Control of NOC by Clay Minerals	620
5.1.4 Control of Anions	623
5.1.4.1 Uptake of Anions by Unmodified Clay Minerals	623
5.1.4.2 Uptake of Anions by Clay Minerals Modified with Organic Cations	624
5.1.4.3 Alternative Methods of Modifying Clay Minerals for Anion Adsorption	626
5.1.5 Control of Turbidity and Residual Treatment Chemicals	627
5.1.5.1 Control of Turbidity in Water Treatment	627
5.1.5.2 Control of Turbidity in Wastewater Treatment	628
5.1.5.3 Control of Residual Treatment Chemicals	628
5.1.6 Concluding Remarks and Future Prospects	628
5.1.6.1 Heavy Metal Ions	629
5.1.6.2 Organic and Biological Cations	629
5.1.6.3 Non-Ionic Organic Molecules	629
5.1.6.4 Anions	630
5.1.6.5 Turbidity and Use of Colloidal Properties	630
5.1.6.6 Exploitation of Mixtures of Properties	630
5.1.6.7 Waste Removal and Disposal	631
5.1.6.8 Carbon Sequestration and Climate Change	631
5.1.6.9 Challenges in Using Clay Minerals for Pollution Control	632
