<i>Preface</i>	ix	2.8 The mantle	30
<i>Acknowledgments</i>	x	2.8.1 Introduction	30
<i>The geologic timescale and stratigraphic column</i>	xi	2.8.2 Seismic structure of the mantle	30
		2.8.3 Mantle composition	31
		2.8.4 The mantle low velocity zone	31
		2.8.5 The mantle transition zone	32
		2.8.6 The lower mantle	32
1 Historical perspective	1	2.9 The core	33
1.1 Continental drift	2	2.10 Rheology of the crust and mantle	33
1.2 Sea floor spreading and the birth of plate tectonics	6	2.10.1 Introduction	33
1.3 Geosynclinal theory	7	2.10.2 Brittle deformation	34
1.4 Impact of plate tectonics	8	2.10.3 Ductile deformation	36
		2.10.4 Lithospheric strength profiles	37
		2.10.5 Measuring continental deformation	39
		2.10.6 Deformation in the mantle	41
2 The interior of the Earth	9	2.11 Isostasy	42
2.1 Earthquake seismology	10	2.11.1 Introduction	42
2.1.1 Introduction	10	2.11.2 Airy's hypothesis	43
2.1.2 Earthquake descriptors	10	2.11.3 Pratt's hypothesis	43
2.1.3 Seismic waves	10	2.11.4 Flexure of the lithosphere	44
2.1.4 Earthquake location	11	2.11.5 Isostatic rebound	45
2.1.5 Mechanism of earthquakes	12	2.11.6 Tests of isostasy	46
2.1.6 Focal mechanism solutions of earthquakes	12	2.12 Lithosphere and asthenosphere	48
2.1.7 Ambiguity in focal mechanism solutions	14	2.13 Terrestrial heat flow	51
2.1.8 Seismic tomography	17		
2.2 Velocity structure of the Earth	19		
2.3 Composition of the Earth	21	3 Continental drift	54
2.4 The crust	22	3.1 Introduction	55
2.4.1 The continental crust	22	3.2 Continental reconstructions	55
2.4.2 Upper continental crust	23	3.2.1 Euler's theorem	55
2.4.3 Middle and lower continental crust	23	3.2.2 Geometric reconstructions of continents	55
2.4.4 The oceanic crust	24	3.2.3 The reconstruction of continents around the Atlantic	56
2.4.5 Oceanic layer 1	24	3.2.4 The reconstruction of Gondwana	57
2.4.6 Oceanic layer 2	25	3.3 Geologic evidence for continental drift	58
2.4.7 Oceanic layer 3	26	3.4 Paleoclimatology	60
2.5 Ophiolites	27		
2.6 Metamorphism of oceanic crust	28		
2.7 Differences between continental and oceanic crust	29		

3.5	Paleontologic evidence for continental drift	61	6	Ocean ridges	121
3.6	Paleomagnetism	64	6.1	Ocean ridge topography	122
3.6.1	Introduction	64	6.2	Broad structure of the upper mantle below ridges	125
3.6.2	Rock magnetism	64	6.3	Origin of anomalous upper mantle beneath ridges	127
3.6.3	Natural remanent magnetization	65	6.4	Depth-age relationship of oceanic lithosphere	128
3.6.4	The past and present geomagnetic field	66	6.5	Heat flow and hydrothermal circulation	129
3.6.5	Apparent polar wander curves	67	6.6	Seismic evidence for an axial magma chamber	131
3.6.6	Paleogeographic reconstructions based on paleomagnetism	68	6.7	Along-axis segmentation of oceanic ridges	133
4	Sea floor spreading and transform faults	72	6.8	Petrology of ocean ridges	140
4.1	Sea floor spreading	73	6.9	Shallow structure of the axial region	141
4.1.1	Introduction	73	6.10	Origin of the oceanic crust	142
4.1.2	Marine magnetic anomalies	73	6.11	Propagating rifts and microplates	145
4.1.3	Geomagnetic reversals	74	6.12	Oceanic fracture zones	148
4.1.4	Sea floor spreading	77	7	Continental rifts and rifted margins	152
4.1.5	The Vine-Matthews hypothesis	78	7.1	Introduction	153
4.1.6	Magnetostratigraphy	79	7.2	General characteristics of narrow rifts	155
4.1.7	Dating the ocean floor	84	7.3	General characteristics of wide rifts	162
4.2	Transform faults	84	7.4	Volcanic activity	169
4.2.1	Introduction	84	7.4.1	Large igneous provinces	169
4.2.2	Ridge-ridge transform faults	88	7.4.2	Petrogenesis of rift rocks	172
4.2.3	Ridge jumps and transform fault offsets	89	7.4.3	Mantle upwelling beneath rifts	175
5	The framework of plate tectonics	91	7.5	Rift initiation	176
5.1	Plates and plate margins	92	7.6	Strain localization and delocalization processes	178
5.2	Distribution of earthquakes	92	7.6.1	Introduction	178
5.3	Relative plate motions	94	7.6.2	Lithospheric stretching	179
5.4	Absolute plate motions	97	7.6.3	Buoyancy forces and lower crustal flow	181
5.5	Hotspots	99	7.6.4	Lithospheric flexure	183
5.6	True polar wander	103	7.6.5	Strain-induced weakening	184
5.7	Cretaceous superplume	106	7.6.6	Rheological stratification of the lithosphere	188
5.8	Direct measurement of relative plate motions	107	7.6.7	Magma-assisted rifting	192
5.9	Finite plate motions	110			
5.10	Stability of triple junctions	113			
5.11	Present day triple junctions	120			

7.7	Rifted continental margins	193
7.7.1	Volcanic margins	193
7.7.2	Nonvolcanic margins	196
7.7.3	The evolution of rifted margins	198
7.8	Case studies: the transition from rift to rifted margin	202
7.8.1	The East African Rift system	202
7.8.2	The Woodlark Rift	204
7.9	The Wilson cycle	208

8 Continental transforms and strike-slip faults 210

8.1	Introduction	211
8.2	Fault styles and physiography	211
8.3	The deep structure of continental transforms	224
8.3.1	The Dead Sea Transform	224
8.3.2	The San Andreas Fault	224
8.3.3	The Alpine Fault	228
8.4	Transform continental margins	230
8.5	Continuous versus discontinuous deformation	232
8.5.1	Introduction	232
8.5.2	Relative plate motions and surface velocity fields	233
8.5.3	Model sensitivities	236
8.6	Strain localization and delocalization mechanisms	239
8.6.1	Introduction	239
8.6.2	Lithospheric heterogeneity	239
8.6.3	Strain-softening feedbacks	242
8.7	Measuring the strength of transforms	246

9 Subduction zones 249

9.1	Ocean trenches	250
9.2	General morphology of island arc systems	251
9.3	Gravity anomalies of subduction zones	252
9.4	Structure of subduction zones from earthquakes	252

9.5	Thermal structure of the downgoing slab	259
9.6	Variations in subduction zone characteristics	262
9.7	Accretionary prisms	264
9.8	Volcanic and plutonic activity	271
9.9	Metamorphism at convergent margins	275
9.10	Backarc basins	279

10 Orogenic belts 286

10.1	Introduction	287
10.2	Ocean–continent convergence	287
10.2.1	Introduction	287
10.2.2	Seismicity, plate motions, and subduction geometry	289
10.2.3	General geology of the central and southern Andes	291
10.2.4	Deep structure of the central Andes	294
10.2.5	Mechanisms of noncollisional orogenesis	297
10.3	Compressional sedimentary basins	302
10.3.1	Introduction	302
10.3.2	Foreland basins	302
10.3.3	Basin inversion	303
10.3.4	Modes of shortening in foreland fold-thrust belts	304
10.4	Continent–continent collision	306
10.4.1	Introduction	306
10.4.2	Relative plate motions and collisional history	306
10.4.3	Surface velocity fields and seismicity	309
10.4.4	General geology of the Himalaya and Tibetan Plateau	312
10.4.5	Deep structure	316
10.4.6	Mechanisms of continental collision	318
10.5	Arc–continent collision	330
10.6	Terrane accretion and continental growth	332
10.6.1	Terrane analysis	332
10.6.2	Structure of accretionary orogens	336
10.6.3	Mechanisms of terrane accretion	342

11 Precambrian tectonics and the supercontinent cycle

11.1 Introduction	347
11.2 Precambrian heat flow	347
11.3 Archean tectonics	349
11.3.1 General characteristics of cratonic mantle lithosphere	349
11.3.2 General geology of Archean cratons	350
11.3.3 The formation of Archean lithosphere	351
11.3.4 Crustal structure	355
11.3.5 Horizontal and vertical tectonics	358
11.4 Proterozoic tectonics	361
11.4.1 General geology of Proterozoic crust	361
11.4.2 Continental growth and craton stabilization	363
11.4.3 Proterozoic plate tectonics	364
11.5 The supercontinent cycle	370
11.5.1 Introduction	370
11.5.2 Pre-Mesozoic reconstructions	370
11.5.3 A Late Proterozoic supercontinent	370
11.5.4 Earlier supercontinents	373
11.5.5 Gondwana–Pangea assembly and dispersal	374

12 The mechanism of plate tectonics

12.1 Introduction	380
12.2 Contracting Earth hypothesis	380
12.3 Expanding Earth hypothesis	380
12.3.1 Calculation of the ancient moment of inertia of the Earth	381
12.3.2 Calculation of the ancient radius of the Earth	382
12.4 Implications of heat flow	382
12.5 Convection in the mantle	384
12.5.1 The convection process	384
12.5.2 Feasibility of mantle convection	386

12.5.3 The vertical extent of convection	387
12.6 The forces acting on plates	388
12.7 Driving mechanism of plate tectonics	390
12.7.1 Mantle drag mechanism	391
12.7.2 Edge-force mechanism	391
12.8 Evidence for convection in the mantle	393
12.8.1 Introduction	393
12.8.2 Seismic tomography	393
12.8.3 Superswells	394
12.8.4 The D" layer	395
12.9 The nature of convection in the mantle	396
12.10 Plumes	399
12.11 The mechanism of the supercontinent cycle	401

13 Implications of plate tectonics

13.1 Environmental change	405
13.1.1 Changes in sea level and sea water chemistry	405
13.1.2 Changes in oceanic circulation and the Earth's climate	406
13.1.3 Land areas and climate	411
13.2 Economic geology	412
13.2.1 Introduction	412
13.2.2 Autochthonous and allochthonous mineral deposits	413
13.2.3 Deposits of sedimentary basins	420
13.2.4 Deposits related to climate	421
13.2.5 Geothermal power	422
13.3 Natural hazards	422

Review questions	424
