

Contents

1	Introduction	1
1.1	The terpenes	1
1.2	The alkaloids	13
1.3	Flavonoids and related compounds	17
1.4	Xanthones	34
1.5	Other oxygen heterocyclic compounds	35
1.6	Quinonoid compounds	40
1.7	Lichen metabolites	43
1.8	Concluding remarks	44
2	Structure	46
2.1	Introduction: A survey of the methods used for determination of structures	46
2.2	Strychnine: A hard nut to crack!	76
2.3	Nepitrin and pedaliin: A case of mistaken identity!	81
2.4	Colchicine: Structure from 'armchair' research!	86
2.5	Longifolene: A molecular acrobat!	90
2.6	β -amyrin: A 'straight' molecule	91
2.7	Wedelolactone: The first of the coumestans	97
2.8	Protoaphin-fb: An insect pigment	100
2.9	Tylophorine: Another 'straight' molecule with a kink or two!	104
2.10	Heliangine: An anti-auxin	107
2.11	Delphisine: Confirmation of a structure by NMR spectra	111
2.12	Tubocurarine: The sting in the poisoned arrow	114
2.13	Sclerophytins A and B: Cytotoxic diterpenes from a marine coral	118
2.14	Mangiferin: Parent of the Indian yellow	121
2.15	Conessine: A pseudo alkaloid	123
3	Stereochemistry	127
3.1	Introduction	127
3.2	Absolute stereochemistry of morphine	133
3.3	Quinine and related alkaloids	136
3.4	Emetine	141
3.5	Enhydrin	144
3.6	Conformations of naturally occurring germacranolides	147
3.7	Stereochemistry of rotenoids	149
3.8	Lactone fusion in sesquiterpene lactones	152
3.9	Stereochemistry of abietic acid	156

3.10	Catechins	157
3.11	Sphingosine	159
3.12	Stereochemistry of menthol	162
3.13	Stereochemistry of the kamahines	165
3.14	Absolute configuration of benzyl isoquinoline alkaloids	168
3.15	Stereochemistry of some indole alkaloids	171
4	Reactions and Rearrangements	174
4.1	Introduction	174
4.2	Rearrangement reactions of morphine	177
4.3	Smaller and more agile molecular acrobats	180
4.4	The Wesley–Moser rearrangement	186
4.5	Some interesting reactions of reserpine	189
4.6	Molecular yoga: Reactions of papaverine	190
4.7	Two examples of transannular reactions	193
4.8	The epoxide as a medium of articulation	195
4.9	Capillarisin: An example of S_N2 displacement	196
4.10	The reverse of a transannular cyclisation	198
4.11	The epoxide group as a ‘handle’ for conversion	199
4.12	Reactions of linalool	200
4.13	The Nametkin rearrangement	202
4.14	Reactions of caryophyllene	205
4.15	Santonin to desmotroposantonin: An example of dienone–phenol rearrangement	208
5	Synthesis	213
5.1	Introduction	213
5.2	Synthesis of polyoxygenated flavones with uncommon oxygenation patterns	226
5.3	Two contrasting syntheses of anthracyclonones	229
5.4	An approach to quassinoid synthesis	233
5.5	Synthesis of a semiochemical	236
5.6	A synthesis of polygodial	238
5.7	Balsamiferone and gravelliferone	239
5.8	Gyrinal: Defensive secretion of an insect	241
5.9	Synthesis of an unusual methylthiophenanthrene diol	242
5.10	A synthesis of (–) khusimone	244
5.11	Synthesis of a chiral marine natural product	247
5.12	A biomimetic synthesis of morphine	250
5.13	Synthesis of ergocristine	252
5.14	A stereoselective synthesis of reserpine	254
5.15	Synthesis of a paraconic acid	256

6 Biosynthesis	258
6.1 Introduction	258
6.2 Biosynthesis of some benzyloisoquinoline alkaloids	266
6.3 Reticuline to morphine	273
6.4 From phenylalanine to colchicine	275
6.5 Tryptophan to quinine	278
6.6 Biosynthesis of some indole alkaloids	283
6.7 Biosynthesis of ergot alkaloids	287
6.8 Evolution of the monoterpenes	289
6.9 From mevalonic acid to the sesquiterpenes	295
6.10 Biosynthesis of some diterpenes	299
6.11 A brief note on the biosynthesis of ophiobolins	303
6.12 Geranyl pyrophosphate to lanosterol and the triterpenes	304
6.13 Non-nitrogenous secondary metabolites from shikimic acid: Flavonoids and related polyphenols	308
6.14 Biosynthesis and transformations of isoflavones	313
6.15 Biosynthesis of anthraquinones	317
7 Biological Significance of Secondary Metabolites	320
7.1 Introduction	320
7.2 Semiochemicals: An overview	322
7.3 Insect pheromones	325
7.4 Plant–insect interactions	329
7.5 Plant–vertebrate interactions	332
7.6 Plant–plant interactions	336
7.7 Plant–microbe interactions	338
7.8 Phytoalexins	338
7.9 Insect–animal interactions	340
7.10 Defensive secretions of insects	340
8 Problems	344
Index	405
