Preface xii

Introduction to Environmental Problems, Sustainability, and Green Chemistry xix

PART I Atmospheric Chemistry and Air Pollution 1

Chapter 1 Stratospheric Chemistry: The Ozone Layer 3

Introduction 3

The Physics, Chemistry, and Biology of UV 6

Activity 11

Stratospheric Chemistry: The Ozone Layer 13

Catalytic Processes of Ozone Destruction 20

Box 1-1 The Rates of Free-Radical Reactions 22

Box 1-2 Calculating the Rates of Reaction Steps 24

Box 1-3 The Steady-State Analysis of Atmospheric Reactions 30

Review Questions 33

Additional Problems 34

Chapter 2 The Ozone Holes 37

Introduction 37

The Ozone Hole and Mid-Latitude Ozone Depletion 37

The Chemistry of Ozone Depletion 40

Polar Ozone Holes 49

Activity 49

Box 2-1 The Chemistry Behind Mid-Latitude Decreases in Stratospheric Ozone 52

The Chemicals That Cause Ozone Destruction 54

Green Chemistry: The Replacement of CFC and Hydrocarbon Blowing Agents with Carbon Dioxide in Producing Foam Polystyrene 57

Green Chemistry: Harpin Technology—Eliciting Nature's Own Defenses Against Diseases 64

Review Questions 65

Green Chemistry Questions 66

Additional Problems 66

Chapter 3 The Chemistry of Ground-Level Air Pollution 69

Introduction 69

Box 3-1 The Interconversion of Gas Concentrations 71

Urban Ozone: The Photochemical Smog Process 76

Activity 81

| | |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Improving Air Quality: Photochemical Smog | 87 |
| Green Chemistry: Strategies to Reduce VOCs Emanating from Organic Solvents | 101 |
| Green Chemistry: A Nonvolatile, Reactive Coalescent for the Reduction of VOCs in Latex Paints | 101 |
| Green Chemistry: The Replacement of Organic Solvents with Supercritical and Liquid Carbon Dioxide; Development of Surfactants for This Compound | 103 |
| Box 3-2 Supercritical Carbon Dioxide | 104 |
| Green Chemistry: Using Ionic Liquids to Replace Organic Solvents: Cellulose, a Naturally Occurring Polymer Replacement for Petroleum-Derived Polymers | 105 |
| Improving Air Quality: Sulfur-Based Emissions | 109 |
| Particulates in Air Pollution | 118 |
| Air Quality Indices and Size Characteristics for Particulate Matter | 126 |
| Box 3-3 The Distribution of Particle Sizes in an Urban Air Sample | 129 |
| Review Questions | 131 |
| Green Chemistry Questions | 131 |
| Additional Problems | 132 |

Chapter 4 The Environmental and Health Consequences of Polluted Air—Outdoors and Indoors 135

| | |
|----------------------------------------------------|-----|
| Introduction | 135 |
| Acid Rain | 137 |
| Activity | 143 |
| The Human Health Effects of Outdoor Air Pollutants | 145 |
| Indoor Air Pollution | 152 |
| Review Questions | 161 |
| Additional Problems | 162 |

PART II Energy and Climate Change 163

Chapter 5 The Greenhouse Effect 165

| | |
|----------------------------------------------------------------------|-----|
| Introduction | 165 |
| The Mechanism of the Greenhouse Effect | 166 |
| Activity | 169 |
| Box 5-1 A Simple Model of the Greenhouse Effect | 173 |
| Molecular Vibrations: Energy Absorption by Greenhouse Gases | 175 |
| The Major Greenhouse Gases | 177 |
| Other Greenhouse Gases | 187 |
| Box 5-2 Determining the Emissions of "Old Carbon" Sources of Methane | 190 |
| The Climate-Modifying Effects of Aerosols | 197 |
| Box 5-3 Cooling over China from Haze | 202 |
| Global Warming to Date | 202 |

| | |
|---------------------------------------------------------|-----|
| Geoengineering Earth's Climate to Combat Global Warming | 210 |
| Atmospheric Residence Time Analysis | 216 |
| Review Questions | 219 |
| Additional Problems | 220 |

Chapter 6 Energy Use, Fossil Fuels, CO₂ Emissions, and Global Climate Change 223

| | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Introduction | 223 |
| Global Energy Usage | 224 |
| Fossil Fuels | 230 |
| Box 6-1 Shale Gas | 233 |
| Box 6-2 Petroleum Refining: Fractional Distillation | 237 |
| Box 6-3 The <i>Deepwater Horizon</i> Oil Spill Disaster | 242 |
| Green Chemistry: Polylactic Acid—The Production of Biodegradable Polymers from Renewable Resources; Reducing the Need for Petroleum and the Impact on the Environment | 249 |
| Sequestration of CO ₂ | 252 |
| The Storage of Carbon Dioxide | 257 |
| Activity | 264 |
| Other Schemes to Reduce Greenhouse Gases | 264 |
| Box 6-4 Removing CO ₂ from the Atmosphere: Direct Air Capture | 265 |
| Carbon Dioxide Emissions in the Future | 267 |
| Activity | 268 |
| The Extent and Potential Consequences of Future Global Warming | 276 |
| Review Questions | 288 |
| Green Chemistry Questions | 289 |
| Additional Problems | 290 |

Chapter 7 Biofuels and Other Alternative Fuels 291

| | |
|--------------------------------------------------------------------------------------------------------|-----|
| Introduction | 291 |
| Biomass and Biofuels: Issues | 292 |
| Ethanol | 295 |
| Biodiesel from Plant Oils and from Algae | 303 |
| Activity | 310 |
| Green Chemistry: Bio-based Liquid Fuels and Chemicals | 310 |
| Green Chemistry: Recycling Carbon Dioxide—A Feedstock for the Production of Chemicals and Liquid Fuels | 311 |
| Thermochemical Production of Fuels, Including Methanol | 313 |
| Hydrogen—Fuel of the Future? | 320 |
| Review Questions | 334 |
| Green Chemistry Questions | 335 |
| Additional Problems | 336 |

Chapter 8 Renewable Energy Technologies: Hydroelectric, Wind, Solar, Geothermal, and Marine Energy and Their Storage 337

- Introduction 337
- Hydroelectric Power 338
- Wind Energy 340
- Marine Energy: Wave and Tidal Power 348
- Geothermal Energy 349
- Direct Solar Energy 354
- The Storage of Renewable Energy—Electricity and Heat 369
- Activity 371
- Review Questions 371
- Additional Problems 372

Chapter 9 Radioactivity, Radon, and Nuclear Energy 373

- Introduction 373
- Radioactivity and Radon Gas 374
 - Box 9-1 Steady-State Analysis of the Radioactive Decay Series 379
- Nuclear Energy 383
- Environmental Problems of Uranium Fuel 390
 - Box 9-2 Radioactive Contamination by Plutonium Production 395
- Accidents and the Future of Nuclear Power 398
- Nuclear Fusion 402
- Review Questions 405
- Additional Problems 406

PART III Water Chemistry and Water Pollution 407**Chapter 10 The Chemistry of Natural Waters 409**

- Introduction 409
- Oxidation–Reduction Chemistry in Natural Waters 413
 - Green Chemistry: Enzymatic Preparation of Cotton Textiles 418
- Acid–Base and Solubility Chemistry in Natural Waters:
 - The Carbonate System 430
 - Box 10-1 Derivation of the Equations for Species Diagram Curves 432
 - The CO_2 –Carbonate System 432
 - Box 10-2 Solubility of CaCO_3 in Buffered Solutions 437
- Ion Concentrations in Natural Waters and Drinking Water 442
- Activity 445
- Review Questions 451
- Green Chemistry Questions 452
- Additional Problems 452

Chapter 11 The Pollution and Purification of Water 455

- Introduction 455
- Water Disinfection 456
 - Box 11-1 Activated Carbon 457
 - Box 11-2 The Desalination of Salty Water 463
 - Box 11-3 The Mechanism of Chloroform Production in Drinking Water 470
- Groundwater: Its Supply, Chemical Contamination, and Remediation 478
- Activity 491
- The Chemical Contamination and Treatment of Wastewater and Sewage 498
 - Box 11-4 Time Dependence of Concentrations in the Two-Step Oxidation of Ammonia 502
- Green Chemistry: Sodium Iminodisuccinate, a Biodegradable Chelating Agent 505
- Modern Wastewater and Air Purification Techniques 510
- Review Questions 515
- Green Chemistry Questions 516
- Additional Problems 516

Chapter 12 Toxic Heavy Metals 519

- Introduction 519
- Mercury 521
- Activity 531
- Lead 537
 - Green Chemistry: Replacement of Lead in Electrodeposition Coatings 543
- Activity 551
- Cadmium 552
- Arsenic 555
 - Box 12-1 Organotin Compounds 558
- Chromium 566
 - Green Chemistry: Removing the Arsenic and Chromium from Pressure-Treated Wood 568
- Review Questions 570
- Green Chemistry Questions 571
- Additional Problems 571

PART IV Toxic Organic Compounds 573**Chapter 13 Pesticides 575**

- Introduction 575
- Activity 579
- DDT 580

| | |
|------------------------------------------------------------------|-----|
| The Accumulation of Organochlorines in Biological Systems | 584 |
| Principles of Toxicology | 589 |
| Organophosphate and Carbamate Insecticides | 597 |
| Activity | 599 |
| Activity | 601 |
| Natural and Green Insecticides, and Integrated Pest Management | 601 |
| Green Chemistry: Insecticides That Target Only Certain Insects | 603 |
| Green Chemistry: A New Method for Controlling Termites | 604 |
| Green Chemistry: Spinetoram, an Improvement on a Green Pesticide | 605 |
| Herbicides | 607 |
| Box 13-1 Genetically Engineered Plants | 611 |
| Final Thoughts on Pesticides | 616 |
| Box 13-2 The Environmental Distribution of Pollutants | 617 |
| Review Questions | 620 |
| Green Chemistry Questions | 621 |
| Additional Problems | 621 |

Chapter 14 Dioxins, Furans, and PCBs 623

| | |
|---------------------------------------------------------------------------------------------------|-----|
| Introduction | 623 |
| Dioxins | 623 |
| Box 14-1 Deducing the Probable Chlorophenolic Origins of a Dioxin | 628 |
| PCBs | 631 |
| Box 14-2 Predicting the Furans That Will Form from a Given PCB | 638 |
| Other Sources of Dioxins and Furans | 641 |
| Green Chemistry: H_2O_2 , an Environmentally Benign Bleaching Agent for the Production of Paper | 643 |
| The Health Effects of Dioxins, Furans, and PCBs | 646 |
| Review Questions | 659 |
| Green Chemistry Questions | 660 |
| Additional Problems | 660 |

Chapter 15 Other Toxic Organic Compounds of Environmental Concern 663

| | |
|------------------------------------------------------|-----|
| Introduction | 663 |
| Polynuclear Aromatic Hydrocarbons (PAHs) | 664 |
| Box 15-1 More on the Mechanism of PAH Carcinogenesis | 670 |
| Environmental Estrogens | 672 |
| Box 15-2 Bisphenol-A | 675 |
| The Long-Range Transport of Atmospheric Pollutants | 683 |
| Fire Retardants | 686 |
| Perfluorinated Sulfonates and Related Compounds | 692 |
| Review Questions | 694 |
| Additional Problems | 694 |

PART V Environment and the Solid State 695**Chapter 16 Wastes, Soils, and Sediments 697**

Introduction 697

Domestic and Commercial Garbage: Its Disposal and Minimization 698

The Recycling of Household and Commercial Waste 705

Green Chemistry: Development of Bio-based Toners 710

Activity 715

Green Chemistry: Development of Recyclable Carpeting 717

Soils and Sediments 719

Hazardous Wastes 742

Review Questions 750

Green Chemistry Questions 751

Additional Problems 752

PART VI Advanced Atmospheric Chemistry 753**Chapter 17 The Detailed Free-Radical Chemistry of the Atmosphere 755**

Introduction 755

Box 17-1 Lewis Structures of Simple Free Radicals 756

Tropospheric Chemistry 757

Systematics of Stratospheric Chemistry 772

Review Questions 775

Additional Problems 776

Appendix Oxidation Numbers and Redox Equation Balancing Reviewed AP-1**Answers to Selected Odd-Numbered Problems AN-1****Index I-1**
