PART I POLYMERS

Chapter 1 Nano- and Micromechanics of Crystalline Polymers

A. Galeski, G. Regnier

1.1. Introduction	3
1.2. Tensile deformation of crystalline polymers	4
1.3. Cavitation in tensile deformation	4
1.4. Tensile deformation of polyethylene and polypropylene	8
1.5. Deformation micromechanisms in crystalline polymers	13
1.6. Molecular mechanisms at a nanometer scale	16
1.7. Dislocations in crystal plasticity	23
1.8. Generation of dislocations	25
1.9. Competition between crystal plasticity and cavitation	34
1.10. Micromechanics modeling in semicrystalline polymers	35
1.10.1. Microstructure and mechanical properties	35
1.10.2. The micromechanical models	36
1.10.3. Idealizing the microstructure of semicrystalline polymers	38
1.10.4. Elastic behavior prediction	40
1.11. Large deformations and bottlenecks	45
1.12. Phenomenological models of polymer deformation under tensile and compressive stresses	45
1.13. Conclusions	47
References	48

Chapter 2 Modeling Mechanical Properties of Segmented Polyurethanes

V. V. Ginzburg , J. Bicerano, C. P. Christenson,
A. K. Schrock, A. Z. Patashinski

2.1. Introduction	59
2.2. Predicting Young's modulus of segmented polyurethanes	63
2.2.1. Relationship between Young's modulus and formulation – experimental observations	63
2.2.2. Theory	64
2.2.3. Young's modulus: comparing theory with experiments	72
2.3. Modeling tensile stress-strain behavior	76
2.4. Linear viscoelasticity	82
2.5. Non-equilibrium factors and their influence on mechanical properties	84
2.6. Conclusions and Outlook	84
Acknowledgment	85
References	85

PART II NANOCOMPOSITES: INFLUENCE OF PREPARATION

Chapter 3 Nanoparticles/Polymer Composites: Fabrication and Mechanical Properties

M. Q. Zhang, M. Z. Rong, W. H. Ruan

3.1. Introduction	93
3.2. Dispersion-oriented manufacturing of nanocomposites	95
3.2.1. Conventional two-step manufacturing	95
3.2.2. Specific two-step manufacturing	107
3.2.3. One-step manufacturing	118
3.3. Dispersion and filler/matrix interaction-oriented manufacturing of nanocomposites	120
3.3.1. Two-step manufacturing in terms of in situ reactive compatibilization	120
3.3.2. One-step manufacturing in terms of in situ graft and crosslinking	124
3.4. Dispersion, filler/filler interaction and filler/matrix interaction-oriented manufacturing of nanocomposites	129
3.5. Conclusions	135
Acknowledgements	136
References	136

Chapter 4 Rubber Nanocomposites: New Developments, New Opportunities

L. Bokobza

4.1. Introduction	141
4.2. General considerations on elastomeric composites	142
4.3. Spherical in situ generated reinforcing particles	144
4.4. Carbon nanotube-filled rubber composites	153
4.5. Conclusions	161
References	162

Chapter 5 Organoclay, Particulate and Nanofibril Reinforced Polymer-Polymer Composites: Manufacturing, Modeling and Applications

D. Bhattacharyya, S. Fakirov

5.1. Introduction	167
5.2. Polypropylene/organoclay nanocomposites: experimental characterisation and modeling	169
5.2.1. Peculiarities of polymer/clay nanocomposites	169
5.2.2. Parametric study and associated properties of PP/organoclay nanocomposites	171
5.2.3. Evaluation of the experimental data by means of Taguchi and Pareto ANOVA methods	174
5.2.4. Materials, manufacturing and characterisation of nanocomposites	178
5.2.5. Analytical models for composites	179
5.2.6. Comparisons of experimental results with the calculated values	182
5.3. The dispersion problem in the case of polymer-polymer nanocomposites	185
5.3.1. Manufacturing of nanofibrillar polymer-polymer composites	187
5.3.2. Nanofibrillar <i>vs.</i> microfibrillar polymer-polymer composites and their peculiarities	188
5.4. Directional, thermal and mechanical characterisation of polymer-polymer nanofibrillar composites	190
5.4.1. Directional state of NFC as revealed by wide-angle X-ray scattering	190
5.4.2. Thermal characterization of NFC	192
5.4.3. Mechanical properties of NFC	193
5.5. Potentials for application of nanofibrillar composites and the materials developed from neat nanofibrils	196

5.6. Conclusions and outlook	199
Acknowledgments	200
References	201

PART III NANO- AND MICROCOMPOSITES: INTERPHASE

Chapter 6 Viscoelasticity of Amorphous Polymer Nanocomposites with Individual Nanoparticles

J. Kalfus

6.1. Introduction	209
6.2. Brief physics of amorphous polymer matrices	210
6.2.1. Equilibrium structure of amorphous chains	210
6.2.2. Microscopic relaxation modes and segmental mobility	212
6.2.3. Entropy vs. energy driven mechanical response	214
6.3. Basic aspects of amorphous polymer nanocomposites	216
6.3.1. Structure of surface adsorbed chains	217
6.3.2. Segmental immobilization of chains in the presence of solid surfaces	219
6.4. Reinforcement of amorphous nanocomposite below and above matrix T_g	222
6.5. Strain induced softening of amorphous polymer nanocomposites	228
6.6. Relaxation of chains in the presence of nanoparticles	233
6.7. Conclusions and outlook	235
Acknowledgements	236
References	236

Chapter 7 Interphase Phenomena in Polymer Micro- and Nanocomposites

J. Jancar

7.1. Introduction	241
7.2. Micro-scale interphase in polymer composites	246
7.3. Nano-scale interphase	250
7.4. Chain immobilization on the nano-scale	252
7.5. Characteristic length-scale in polymer matrix nanocomposites	255
7.6. Conclusions and outlook	257
Acknowledgement	258
References	258

PART IV NANO- AND MICROCOMPOSITES: CHARACTERIZATION

Chapter 8 Deformation Behavior of Nanocomposites Studied by X-Ray Scattering: Instrumentation and Methodology

N. Stribeck

8.1. Introduction	269
8.2. Scattering theory and materials structure	272
8.2.1. Relation between a CDF and IDFs	275
8.3. Analysis options derived from scattering theory	276
8.3.1. Completeness – a preliminary note	276
8.3.2. Analysis options	276
8.3.3. Parameters, functions and operations	277
8.4. The experiment	278
8.4.1. Principal design	278
8.4.2. Engineering solutions	279
8.4.3. Scattering data and its evaluation	284
8.5. Techniques: Dynamic <i>vs.</i> stretch-hold	286
8.6. Advanced goal: Identification of mechanisms	286
8.7. Observed promising effects from stretch-hold experiments	289
8.7.1. Orientation of nanofibrils in highly oriented polymer blends by means of USAXS	289
8.7.2. USAXS studies on undrawn and highly drawn PP/PET blends	291
8.8. Choosing experiments	293
8.8.1. Experiments with a macrobeam	293
8.8.2. Experiments with a microbeam	294
8.9. Conclusion and outlook	295
References	296

Chapter 9 Creep and Fatigue Behavior of Polymer Nanocomposites

A. Pegoretti

9.1. Introduction	301
9.2. Generalities on the creep behavior of viscoelastic materials	302
9.3. Generalities on the fatigue resistance of polymeric materials	306
9.4. Creep behavior of polymer nanocomposites	309
9.4.1. Creep response of PNCs containing one-dimensional nanofillers	309

9.4.2. Creep response of PNCs containing two-dimensional nanofillers	315
9.4.3. Creep response of PNCs containing three-dimensional nanoparticles	317
9.5. Fatigue resistance of polymer nanocomposites	321
9.5.1. Fatigue behavior of PNCs containing one-dimensional nanofillers	322
9.5.2. Fatigue behavior of PNCs containing two-dimensional nanofillers	326
9.5.3. Fatigue behavior of PNCs containing three-dimensional nanoparticles	332
9.6. Conclusions and outlook	334
References	335

Chapter 10 Deformation Mechanisms of Functionalized Carbon Nanotube Reinforced Polymer Nanocomposites

S. C. Tjong

10.1. Introduction	341
10.2. Deformation characteristics	343
10.2.1. CNT/glassy thermoplastic nanocomposites	345
10.2.2. CNT/semicrystalline thermoplastic nanocomposites	356
10.2.3. CNT/epoxy nanocomposites	362
10.2.4. CNT/elastomer nanocomposites	369
10.3. Conclusions	371
References	371

Chapter 11 Fracture Properties and Mechanisms of Polyamide/Clay Nanocomposites

A. Dasari, S.-H. Lim, Z.-Z. Yu, Y.-W. Mai

11.1. Introduction	377
11.2. Dispersion of clay in polymers	378
11.3. Crystallization behavior	384
11.4. Fracture properties and mechanisms	387
11.4.1. Improved toughness in polymer/clay nanocomposites	387
11.4.2. Brittleness of polymer/clay nanocomposites	393
11.4.3. Approaches to improve fracture toughness of polymer/clay nanocomposites	399
11.5. Conclusions and future work	414
Acknowledgements	415
References	415

Chapter 12 On the Toughness of “Nanomodified” Polymers and Their Traditional Polymer Composites

J. Karger-Kocsis

12.1. Introduction	425
12.2. Toughness assessment	427
12.3. Nanomodified thermoplastics	428
12.3.1. Amorphous polymers	428
12.3.2. Semicrystalline polymers	432
12.4. Nanomodified thermosets	444
12.4.1. (Neat) Resins	444
12.4.2. Toughened and hybrid resins	453
12.5. Nanomodified traditional composites	456
12.5.1. Thermoplastic matrices	457
12.5.2. Thermoset matrices	457
12.6. Outlook and future trends	460
Acknowledgements	460
References	461

Chapter 13 Micromechanics of Polymer Blends: Microhardness of Polymer Systems Containing a Soft Component and/or Phase

S. Fakirov

13.1. Introduction	471
13.2. The peculiarity of polymer systems containing a soft component and/or phase	472
13.3. Comparison between measured and computed microhardness values for various systems	477
13.3.1. Two-component multiphase systems comprising soft phase(s) (blends of semicrystalline homopolymers)	477
13.3.2. One-component multiphase systems containing soft phase(s) (polyblock copolymers)	478
13.3.3. Two-component one-phase systems (miscible blends of amorphous polymers)	482
13.3.4. Two-component two-phase amorphous systems containing a soft phase	484
13.3.5. One-component two-phase systems (semicrystalline polymers with T_g below room temperature)	487
13.4. Main factors determining the microhardness of polymer systems containing a soft component and/or phase	489

13.4.1. Importance of the ratio hard/soft components (or phases)	489
13.4.2. Crystalline or amorphous solids	490
13.4.3. Copolymers vs. polymer blends	492
13.4.4. New data on the relationship between H and T_g of amorphous polymers	493
13.4.5. Modified additivity law for systems containing soft component and/or phase	495
13.5. Microhardness on the interphase boundaries in polymer blends and composites and doubly injection molding processing	495
13.5.1. Microhardness on the interphase boundaries in polymer blends	495
13.5.2. Microhardness on the interphase boundaries in polymers after double injection molding processing	502
13.6. Conclusions and outlook	510
Acknowledgements	512
References	512

PART V NANOCOMPOSITES: MODELING

Chapter 14 Some Monte Carlo Simulations on Nanoparticle Reinforcement of Elastomers

J. E. Mark, T. Z. Sen, A. Kloczkowski

14.1. Introduction	519
14.2. Description of simulations	520
14.2.1. Rotational isomeric state theory for conformation-dependent properties	520
14.2.2. Distribution functions	520
14.2.3. Applications to unfilled elastomers	521
14.2.4. Applications to filled elastomers	522
14.3. Spherical particles	522
14.3.1. Particle sizes, shapes, concentrations, and arrangements	522
14.3.2. Distributions of chain end-to-end distances	523
14.3.3. Stress-strain isotherms	525
14.3.4. Effects of arbitrary changes in the distributions	526
14.3.5. Some preliminary results on physisorption	528
14.3.6. Relevance of cross linking in solution	530
14.3.7. Detailed descriptions of conformational changes .. during chain extension	534

14.4. Ellipsoidal particles	534
14.4.1. General features	534
14.4.2. Oblate ellipsoids	536
14.5. Aggregated particles	537
14.5.1. Real systems	537
14.5.2. Types of aggregates for modeling	537
14.5.3. Deformabilities of aggregates	538
14.6. Potential refinements	538
14.7. Conclusions	538
Acknowledgments	538
References	539

Chapter 15 Modeling of Polymer Clay Nanocomposites for a Multiscale Approach

P. E. Spencer, J. Sweeney

15.1. Introduction	545
15.2. Sequential multiscale modeling	547
15.3. Representative volume element	548
15.3.1. Effective elastic material properties	549
15.3.2. Statistical ensemble	550
15.3.3. Periodic boundary conditions	551
15.4. Generating RVE geometry	553
15.4.1. Number of platelets	553
15.4.2. Generation of platelet configurations	554
15.5. Periodic finite element mesh	556
15.6. Numerical solution process	558
15.6.1. Finite element analysis of boundary value problem	558
15.6.2. Ensemble averaged elastic properties	560
15.6.3. Automation	561
15.7. Elastic RVE numerical results	562
15.7.1. Fully exfoliated straight platelets	565
15.7.2. Effect of platelet orientation	567
15.7.3. Curved platelets	569
15.7.4. Multi-layer stacks of intercalated platelets	572
15.8. Conclusions	574
Acknowledgements	576
References	576
Acknowledgements to previous publishers	579
