

Contents

Preface	ix	
Chapter 1	<i>Introduction – Scope of Aquatic Surface Chemistry</i>	1
	Appendix: The International Units, some useful Conversion Factors, and numerical Constants	9
	Reading Suggestions	12
Chapter 2	<i>The Coordination Chemistry of the Hydrrous Oxide-Water Interface</i>	13
	2.1 Introduction	13
	2.2 The Acid-Base Chemistry of Oxides; pH of Zero Point of Charge	15
	2.3 Surface Complex Formation with Metal Ions	21
	2.4 Ligand Exchange; Surface Complex Formation of Anions and Weak Acids	24
	2.5 Affinities of Cations and Anions for Surface Complex Formation with Oxides and Silicates	30
	2.6 The Coordinative Unsaturation of Non-Hydrrous Oxide Surfaces	37
	Problems	39
	Reading Suggestions	41
Chapter 3	<i>Surface Charge and the Electric Double Layer</i>	43
	3.1 Introduction – Acquiring Surface Charge	43
	3.2 The Net Total Particle Charge; Surface Potential	47
	3.3 The Relation between pH, Surface Charge and Surface Potential	51
	3.4 Surface Charge on Carbonates, Silicates, Sulfides and Phosphates	56
	3.5 Correcting Surface Complex Formation Constants for Surface Charge	67
	3.6 Some Thermodynamic Aspects of Interactions on Oxide Surfaces	75
	Appendix: A.3.1 The Gouy-Chapman Theory	79
	A.3.2 The solid Phase; References	82
	Problems	83
	Reading Suggestions	86

Chapter 4	Adsorption	87
4.1	Introduction – Intermolecular Interaction between Solute and Solid Phase	87
4.2	Gibbs Equation on the Relationship between Interfacial Tension and Adsorption	88
4.3	Adsorption Isotherms	90
4.4	Adsorption Kinetics	97
4.5	Fatty Acids and Surfactants	107
4.6	Humic Acids	112
4.7	The Hydrophobic Effect	114
4.8	The "Sorption" of Hydrophobic Substances to Solid Materials that contain Organic Carbon	116
4.9	The Sorption of Polymers	120
4.10	Reversibility of Adsorption	126
4.11	Ion Exchange	129
4.12	Transport of Adsorbable Constituents in Ground Water and Soil Systems	134
Appendix:	A.4.1 Contact Angle, Adhesion and Cohesion	142
	A.4.2 Electrocapillarity	147
	Problems	153
	Reading Suggestions	155
Chapter 5	<i>The Kinetics of Surface Controlled Dissolution of Oxide Minerals; an Introduction to Weathering</i>	157
5.1	Introduction – Chemical Weathering	157
5.2	A General Rate Law for Surface Controlled Dissolution	162
5.3	Ligand Promoted Dissolution	165
5.4	The Proton-Promoted Dissolution Reaction	169
5.5	Some Case Studies	175
5.6	Case Study: Kaolinite	179
5.7	Experimental Apparatus	185
5.8	Incongruent Dissolution as a Transient to Congruent Dissolution	187
5.9	Weathering and the Environmental Proton Balance	189
5.10	Comparison between Laboratory and Field Weathering Results	191
5.11	Case Study: Chemical Weathering of Crystalline Rocks in the Catchment Area of Acidic Ticino Lakes, Switzerland	197
5.12	Inhibition of Dissolution; Passivity	199
Appendix:	Alkalinity, a "Product of Weathering"	206
	Reading Suggestions	209

Chapter 6	<i>Precipitation and Nucleation</i>	211
	6.1 Introduction – The Initiation and Production of the Solid Phase	211
	6.2 Homogeneous Nucleation	214
	6.3 Heterogeneous Nucleation	217
	6.4 The Interfacial Energy and the Ostwald Step Rule	219
	6.5 Enhancement of Heterogeneous Nucleation by Specific Adsorption of Mineral Constituents	224
	6.6 Surface Precipitation	229
	6.7 Crystal Growth	233
	Appendix: A.6.1 Solubility of Fine Particles	235
	A.6.2 Solid Solution Formation	236
	Reading Suggestions	242
 Chapter 7	 <i>Particle-Particle Interaction</i>	 243
	7.1 Introduction – Aquatic Particles as Adsorbents and Reactants	243
	7.2 Kinetics of Particle Agglomeration	247
	7.3 Colloid-Stability; Qualitative Considerations	251
	7.4 Colloid-Stability; Effects of Surface Chemistry on Surface Potential	253
	7.5 A Physical Model for Colloid Stability	262
	7.6 Filtration compared with Coagulation	267
	7.7 Coagulation in Lakes	271
	7.8 Some Water-Technological Considerations in Coagulation and Flotation	276
	7.9 Bacterial Adhesion; Hydrophobic and Electrostatic Parameters	280
	7.10 Colloids; The Use of (Membrane) Filtration to separate "Particulate" from "Dissolved" Matter	282
	Appendix: Distribution Coefficients, Possible Artefacts	286
	Reading Suggestions	288
 Chapter 8	 <i>Carbonates and their Reactivities</i>	 289
	8.1 Introduction	289
	8.2 Dissolution and Crystal Growth of Carbonates	290
	8.3 The Crystal Growth of CaCO ₃ (Calcite)	293
	8.4 Saturation State of Lake Water and Seawater with Respect to CaCO ₃	294
	8.5 Some Factors in the Diagenesis of Carbonates	297
	8.6 Coprecipitation Reactions and Solid Solutions	298

8.7	Magnesian Calcite	301
	Appendix: Carbonate Solubility Equilibria	304
	Reading Suggestions	307
Chapter 9	<i>Redox Processes Mediated by Surfaces</i>	309
9.1	Specific Adsorption of Oxidants and Reductants	309
9.2	Some Thermodynamic Considerations	311
9.3	Catalysis of Redox Reactions by Surfaces	313
9.4	Oxidation of Transition Ions; Hydrolysis and Surface Binding Enhance Oxidation	325
9.5	Mediation of Redox Reactions of Organic Substances by the Hydrous Ferric Oxide Surface and Fe(II)-Surfaces	329
9.6	Redox Reactions of Iron and Manganese at the Oxidic Anoxic Boundary in Waters and Soils	331
	Reading Suggestions	335
Chapter 10	<i>Heterogeneous Photochemistry</i>	337
10.1	Heterogeneous Photosynthesis	337
10.2	Semiconducting Minerals	342
10.3	Kinetics of Heterogeneous Photoredox Reactions and the Role of Surface Complexation	347
10.4	Case Studies on Heterogeneous Photoredox Reactions	352
10.5	The Cycling of Iron in Natural Systems; Some Aspects Based on Heterogeneous Redox Processes	361
	Reading Suggestions	367
Chapter 11	<i>Regulation of Trace Elements by the Solid-Water Interface in Surface Waters</i>	369
11.1	Introduction	369
11.2	The Particle Surface as a Carrier of Functional Groups	369
11.3	Titrating Metal Ions with Particles	374
11.4	Regulation of Dissolved Heavy Metals in Rivers	378
11.5	Regulation of Trace Elements in Lakes	381
11.6	Oceans	393
	Reading Suggestions	396
	References	397
	Index	419
