<i>Preface</i>	xv
1. Microspheres for Enzyme Immobilization	1
<i>Fei Gao, Yuxia Wang, and Guanghui Ma</i>	
1.1 General Introduction	1
1.2 Enzyme Supported by Porous Microspheres	2
1.2.1 Mesoporous Inorganic Microspheres	4
1.2.2 Macroporous Organic Microspheres	6
1.3 Spheres at Nanometer Scale	9
1.4 Single-Enzyme Capsule at Nanoscale	12
1.5 Enzyme Supported by Microcapsules	14
1.5.1 Conventional Microcapsules	14
1.5.2 “Ship-in-a-Bottle” Approach	15
1.5.3 “Fish-in-a-Net” Approach	16
1.6 Enzyme Supported by Magnetic Carriers	20
1.6.1 Design and Preparation of Magnetic Polymer Microspheres	20
1.6.1.1 Preparation of magnetic polymer microspheres	20
1.6.1.2 Introduction of functional groups on magnetic polymer microspheres	22
1.6.2 Property Improvement of the Immobilized Enzymes on Magnetic Polymer Microspheres	26
1.6.2.1 Properties of the magnetic polymer microspheres	27
1.6.2.2 Functional groups on the magnetic polymer microspheres	28
1.7 Enzyme Supported by Smart Carriers	30
1.8 Conclusion and Prospects	35

2. Microspheres for Cell Culture	49
<i>Weiying Zhou, Guanghui Ma, and Zhiguo Su</i>	
2.1 Introduction	49
2.2 Characteristics of Microcarriers for Cell Culture	51
2.2.1 Effect of Surface Charge and Charge Density of Microcarriers	53
2.2.2 Effect of Hydrophobicity (Wettability) of Microcarriers	54
2.2.3 Effect of Particle Size on Cell Attachment and Growth	55
2.3 Surface Modification of Microcarrier	55
2.3.1 Surface Modification with Charged Groups	56
2.3.2 Surface Modification with Proteins	57
2.3.3 Modification with Smaller Biologically Active Functional Groups	59
2.4 Macroporous Microcarriers for Cell Culture	60
2.5 Three-Dimensional Cell Culture Using Microcarrier Technology	61
2.5.1 Three-Dimensional Microcarrier Culture in Tissue Engineering	62
2.5.2 Preparation and Surface Modification of Microcarriers for Tissue Engineering	65
2.5.3 Highly Open Porous Microcarriers for Three-Dimensional Cell Culture	68
2.6 Summary and Prospects	73
3. Microcapsules for Cell Transplantation: Design, Preparation, and Application	85
<i>Guojun Lv, Ying Zhang, Mingqian Tan, Hongguo Xie, and Xiaojun Ma</i>	
3.1 Introduction	85
3.2 Cell Encapsulation Technology	87
3.3 Design and Elaboration of Microcapsules for Cell Transplantation	97
3.3.1 Biocompatibility	97
3.3.2 Searching for the Optimal Transplantation Site	99
3.3.3 Internal Oxygen Mass Transfer Limitations	100

3.3.4	Microcapsule Permeability and MWCO	101
3.3.5	Mechanical Integrity and Stability	103
3.3.6	Surface Properties of Microcapsules	104
3.4	Application of Cell Encapsulation Technology	105
3.4.1	Diabetes	105
3.4.2	Stem Cell Technology	107
3.4.3	Bone and Cartilage Defect	108
3.4.4	Neurological Diseases	109
3.4.5	Cancer	110
3.5	Future Directions	112
4.	Microspheres for the Separation and Refolding of Proteins with an Emphasis on Particles Made of Agarose	123
	<i>Jan-Christer Janson</i>	
4.1	Introduction	123
4.2	Design and Preparation of Agarose Microspheres for Protein Chromatography	125
4.2.1	Agarose Raw Material	125
4.2.2	Methods for Preparing Agarose Microspheres	128
4.2.2.1	Granulation	128
4.2.2.2	Pearl condensation	128
4.2.2.3	Suspension gelation (water-in-oil emulsification)	128
4.2.2.4	Membrane emulsification	129
4.2.3	Cross-Linking Methods	129
4.2.3.1	Cross-linking with dibromopropanol and epichlorohydrin	130
4.2.3.2	Cross-linking with divinyl sulphone	131
4.2.3.3	Cross-linking in the presence of salt	131
4.2.3.4	Cross-linking using a combination of reagents	132
4.2.3.5	Cross-linking of pre-activated agarose polymers	132
4.2.4	Superporous Agarose Gel Media	132
4.2.5	Advantages of Agarose as a Matrix for Protein Chromatography	133

4.2.6	Recent Developments of Agarose Microspheres for Protein Separation	137
4.3	The Use of Microspheres in Protein Refolding	139
4.3.1	Refolding Using Size-Exclusion Microspheres	140
4.3.2	Solid-Phase (On-Column) Refolding	142
4.3.2.1	Refolding using binding to ion-exchange media	142
4.3.2.2	Refolding using binding to hydrophobic media	144
4.3.2.3	Refolding using binding to affinity media	145
4.3.2.4	Refolding using binding to a combination of media	145
4.4	Conclusion and Prospects	146
5.	Microspheres for Separation of Bioactive Small Molecules	153
	<i>Fangling Gong, Guifeng Zhang, and Zhiguo Su</i>	
5.1	Introduction	153
5.2	Chromatographic Stationary Phase	155
5.2.1	The Requirements of Microspheres to Be Used as Stationary Phases	155
5.2.2	Inorganic Stationary Phases	157
5.2.3	Polymer-Based Stationary Phases	158
5.3	Application of Microspheres in Separation of BSM	159
5.3.1	Hydrophobic Microspheres Used for BSM Separation	160
5.3.2	Hydrophilic Microspheres Used for BSM Separation	168
5.3.3	Thermo-Responsive Microspheres Used for BSM Separation	170
5.3.4	pH-Responsive Microspheres Used for BSM Separation	173
5.3.5	Core-Shell Structure Microspheres Used for BSM Separation	175
5.4	Summary and Prospects	177

6. Microspheres for Separation of PEG-Modified Biomolecules 183

Yongdong Huang, Yanqin Zhai, and Zhiguo Su

6.1	Introduction	183
6.2	Separation of PEGylated Biomolecules	185
6.2.1	Properties of PEG Biomolecules	186
6.2.2	Methods for the Separation of PEG Biomolecules	187
6.2.2.1	Size-exclusion chromatography	188
6.2.2.2	Ion-exchange chromatography	189
6.2.2.3	Hydrophobic interaction chromatography and reverse-phase chromatography	192
6.3	Microspheres for the Separation of PEG-Modified Biomolecules	192
6.3.1	Microspheres of SEC	193
6.3.2	Microspheres of IEC	194
6.3.3	Microspheres of Hydrophobic Interaction Chromatography	197
6.4	Conclusion and Prospects	198

7. Microspheres for Solid-Phase Organic Synthesis 203

Jing Zhang and Zhiguo Su

7.1	Solid-Phase Organic Synthesis	203
7.1.1	Introduction	203
7.1.2	Solid-Phase Peptide Synthesis	204
7.1.3	Solid-Phase Synthesis of Oligonucleotides	207
7.1.4	Solid-Phase Synthesis of Peptide–Oligonucleotide Conjugates	210
7.1.5	Solid-Phase Synthesis in Combinatorial Chemistry	211
7.1.6	Solid-Phase Synthesis of Other Chemicals and Biomolecules	212
7.2	Polymer Microsphere Supports in Solid-Phase Synthesis	213
7.2.1	Polystyrene Microspheres	214

7.2.2	PEG-Grafted Microspheres	216
7.2.3	Polyacrylamides Microspheres	218
7.2.4	Controlled-Pore Glass (CPG) Beads	219
7.2.5	Other Supports	220
7.3	Conclusion and Prospects	220
8.	Microspheres for Solid-Phase Modification of Proteins	227
	<i>Tao Hu and Zhiguo Su</i>	
8.1	Introduction	227
8.2	Modification Based on Ion-Exchange Chromatography	228
8.2.1	PEGylation of Proteins Using Ion-Exchange Chromatography	230
8.2.2	Albuminylation Using Ion-Exchange Chromatography	232
8.3	Modification Based on Size-Exclusion Chromatography	234
8.4	Modification Based on Affinity Chromatography	236
8.4.1	PEGylation Using Affinity Chromatography	236
8.4.2	Preparation of Protein-Protein Conjugate Using Affinity Chromatography	237
8.5	Conclusion and Prospects	239
9.	Microspheres and Microcapsules for Protein Drug Delivery	245
	<i>Lianyan Wang, Tingyuan Yang, and Guanghui Ma</i>	
9.1	Introduction	245
9.2	Properties of Protein and Peptide	246
9.3	Characteristics and Advantages of Microsphere-Based Drug-Delivery Systems	247
9.4	Drug-Loading Methods	249
9.4.1	Encapsulation	250
9.4.2	Adsorption	279
9.5	Applications of Microsphere-Based Protein Delivery	288
9.5.1	Protein or Peptide Drug Delivery	288
9.5.2	Vaccine Adjuvant	294
9.6	Conclusion	297

10. Micro/Nanospheres for Gene Drug Delivery	303
<i>Jie Wu and Guanghui Ma</i>	
10.1 Introduction	303
10.2 The Main Barriers for Micro/Nanospheres as Gene Vectors	304
10.3 The Preparation of Micro/Nanospheres as Gene Vectors	311
10.3.1 Polymers	311
10.3.1.1 Charge density	311
10.3.1.2 Polymer length	313
10.3.1.3 Toxicity	313
10.3.2 Preparation Methods	315
10.3.2.1 Condensation	315
10.3.2.2 Emulsification	316
10.3.2.3 Other methods	316
10.3.3 Characteristics	317
10.3.3.1 Size	317
10.3.3.2 Morphology	318
10.3.3.3 Surface characteristics	319
10.4 The Applications of Micro/Nanospheres as Gene Vectors	321
10.4.1 Cancer Therapy	321
10.4.2 Vaccine	323
10.4.3 Ocular Disease Therapy	324
10.5 The Key Points of Micro/Nanospheres as Gene Vectors	325
10.5.1 Optimization of the Particles' Design According to Different Administration Routes	326
10.5.2 Protection of Bioactivity During the Preparation and Degradation Process of Micro/Nanospheres	327
10.5.3 The Toxicity of Nanospheres	328
10.6 Conclusion and Prospects	329

11. Microspheres for Targeting Delivery of Anticancer Drugs	353
<i>Wei Wei, Zhanguo Yue, Hua Yue, and Guanghui Ma</i>	
11.1 Introduction	353
11.2 The Widely Used Anticancer Drug Carriers	354
11.2.1 Polymeric Particles	355
11.2.2 Liposomes	357
11.2.3 Polymeric Micelles	359
11.2.4 Implanted Microsystems	360
11.2.5 Dendrimers	362
11.2.6 Emulsions	365
11.2.7 Nanocrystals	366
11.2.8 Carbon Nanotubes	368
11.3 Smart Targeting Strategies in Cancer Therapy	370
11.3.1 Receptor/Ligand-Mediated Targeting	370
11.3.2 Thermal Targeting	377
11.3.3 pH Targeting	380
11.3.4 Magnetic Targeting	383
11.3.5 Combined Delivery Systems	386
11.4 Conclusion and Prospects	389
12. Microspheres for Targeting Delivery to Brain	399
<i>Chen Jiang, Xinguo Jiang, Yang Liu, Kun Shao, and Rongqin Huang</i>	
12.1 Introduction	399
12.2 Drug Delivery Systems to Brain	400
12.2.1 Liposomes	400
12.2.2 Cationic Lipids	402
12.2.3 Synthetic Cationic Polymers	403
12.2.3.1 Polyethylenimine	403
12.2.3.2 Polyamidoamine (PAMAM)	404
12.2.3.3 Polyamino acids	406
12.2.4 Polymeric Micelles	407
12.2.5 Polymeric Nanoparticles	408
12.2.6 Solid Lipid Nanoparticles	410
12.3 Brain-Targeting Strategies for Drug Delivery	411
12.3.1 Adsorptive-Mediated Endocytosis	411

12.3.2	Cell-Penetrating Peptides-Mediated Transmembrane Transport	412
12.3.2.1	Antennapedia peptide (Antp)	413
12.3.2.2	Low molecular weight protamine	415
12.3.3	Receptor-Mediated Endocytosis	416
12.3.3.1	Transferrin receptor	416
12.3.3.2	Lactoferrin receptors	421
12.3.3.3	Insulin receptors	424
12.3.3.4	Low-density lipoprotein receptor family	426
12.3.3.5	Leptin receptors	429
12.3.3.6	Nicotinic acetylcholine receptor	430
12.4	Drug Delivery Systems Applied in Brain Diseases	432
12.4.1	Parkinson's Disease	432
12.4.1.1	Therapy with proteins	433
12.4.1.2	Gene therapy	434
12.4.2	Alzheimer's Disease	436
12.4.3	Brain Tumors	439
12.4.3.1	Antisense/RNAi gene therapy	440
12.4.3.2	Gene-based immunotherapy	443
12.4.3.3	Other routes	444
12.5	Summary	444
13.	Nano/Microspheres in Bioimaging and Medical Diagnosis	465
	<i>Xiaohui Li and Chunying Chen</i>	
13.1	Introduction	465
13.2	Nano/Microspheres in Bioimaging	466
13.2.1	Nano/Microspheres for Optical Imaging	468
13.2.1.1	Optical imaging	468
13.2.1.2	Materials used for preparing optical imagings	
	nano/microspheres	468
13.2.1.3	Polymer-based nano/microspheres used for imaging probes	471
13.2.2	Nano/Microspheres for Magnetic Resonance Imaging	474

13.2.2.1	Polymer-based nano/microspheres for MRI bioimaging probes	475
13.2.2.2	Magnetic dye-doped polymeric nano/microspheres	478
13.2.3	Nano/Microspheres for Radionuclide Imaging	479
13.2.3.1	Radionuclide imaging	479
13.2.3.2	Nano/microspheres for SPECT and PET	480
13.2.4	Nano/Microspheres for Ultrasound Imaging	482
13.2.4.1	Ultrasound imaging	482
13.2.4.2	Microbubbles for ultrasound imaging	483
13.3	Nano/Microspheres in Medical Diagnosis	485
13.3.1	Nano/Microspheres-Based Aggregation Tests	485
13.3.2	Nano/Microspheres-Based Nucleic Acid Analysis	486
13.3.3	Nano/Microspheres-Based Flow Cytometric Analysis	487
13.3.4	Other Nano/Microspheres-Based Analysis	488
13.4	Conclusion and Prospects	490
14.	Affinity Nanoparticles for Detection	499
	<i>Haruma Kawaguchi and Hiroshi Handa</i>	
14.1	Introduction	499
14.1.1	Definition and Feature of Affinity Latex	499
14.1.2	Affinity Chromatography	499
14.1.3	History of Affinity Latex	501
14.2	Design of Affinity Latex Particle	502
14.2.1	Design of Particle	502
14.2.2	Ligand	503
14.2.3	Immobilization of Ligand	504
14.2.3.1	Chemical bonding or physical adsorption	504

14.2.3.2	DNA immobilization via chemical bonding using protruding chain end	505
14.2.3.3	Position of active site of on-surface ligand	506
14.2.3.4	Spacer	507
14.3	Applications	508
14.3.1	DNA Diagnosis	508
14.3.1.1	Separation of normal and point mutant DNAs using DNA-carrying particles	509
14.3.1.2	Enzyme-carrying affinity latex as diagnostic reagent	510
14.3.2	Drug-Carrying Affinity Latex	512
14.3.3	Affinity Latex to Determine Telomerase Activity	512
14.3.4	Multiplex Assay Using Affinity Latex	513
14.3.4.1	Two multiplex assay systems	513
14.3.4.2	Coding of particles	514
14.3.4.3	Practice of multiplex beads assay	514
14.4	Postface	514
	<i>Index</i>	519
