
Contents

1	Fundamentals	1
1.1	Description of Modern Environmental Problems	4
1.2	Views of Technology and Environmental Protection	5
1.3	Ecological Fundamentals	9
1.3.1	Structure of Ecosystems	11
1.3.2	Stability of Ecological and Technical Systems	16
1.4	Technological Fundamentals	17
1.4.1	Risk Assessment	20
1.4.2	Environmental Information Technology (IT)	22
1.4.3	Environmental Monitoring and Process Control Technology	24
1.4.4	Material and Energy Flow Analysis	30
1.4.5	Pollution Control Process Technology	31
1.4.6	Ecological Engineering for Improving the Quality of Surface Water	38
1.4.7	Ecological Chemistry and Geochemical Engineering	39
1.4.8	Geological Engineering	42
1.4.9	Protective Measures in Hydraulic Engineering	44
1.4.10	Energy Conservation and Structural Engineering	45
1.5	Pollution Control Technology as an Interdisciplinary Approach	46
2	Pollution Control Technology in the Private Sector	49
2.1	Economic Aspects of Pollution Control	49
2.2	Ecological Corporate Strategy	56
2.2.1	The Ecological Reorientation of Business Administration	56
2.2.2	Managerial Strategies for Pollution Control	58
2.3	Technology in Corporate Pollution Control	61
2.3.1	Eco-Controlling: Information Systems and Eco-Balances	62
2.3.2	Material Management and Logistics	67

2.3.3	Environmentally Friendly Designing	71
2.3.4	Production and Manufacturing Technology	74
2.3.5	Process-Integrated Pollution Control	76
2.3.6	Goal Hierarchy in Corporate Pollution Control Technology ...	78
2.3.7	Policy Perspectives	80
3	Contaminants	81
3.1	Chemistry and the Environment – A Controversy	83
3.1.1	Products of the Chemical Industry	83
3.1.2	Dimensions of the Spread of Environmental Chemicals	86
3.2	Contaminant Impacts	90
3.2.1	Definitions	90
3.2.2	Dose/Response Relationship	92
3.2.3	Environmental Standards	94
3.3	Heavy Metals	100
3.3.1	Impacts from Heavy Metals	100
3.3.2	Sources and Distribution in the Environment	103
3.3.3	Concentrations and Threshold Values in Surface Waters	105
3.4	Organic Contaminants	107
3.4.1	Structure and Characteristics of Organic Contaminants	107
3.4.2	Distribution in the Environment	110
3.4.3	Persistence and Degradation	115
3.4.4	Aquatic Toxicity and Limits	116
3.5	Radioactivity	117
3.5.1	Application of Ionization Radiation	117
3.5.2	Units of Measure in Radiation Protection	119
3.5.3	Sources of Naturally Occurring Radiation Exposure	121
3.5.4	Radiation from Human Activities	126
3.5.5	Evaluation of the Total Exposure	129
4	Energy and Climate	131
4.1	Emission of Carbon Dioxide and Methane	132
4.1.1	Carbon Dioxide	132
4.1.2	Methane	133
4.2	Energy Conservation Potential and Climate-Relevant Emissions	134
4.2.1	Power Plants	135
4.2.2	Industry	138
4.2.3	Transportation	142
4.2.4	A Balance of the Energy Conservation Potentials	143

4.3	Renewable Energy	145
4.3.1	Processes for Generating Renewable Energy	149
4.3.2	Limits of the Generation of Renewable Energy	153
4.4	Future Technologies in the Energy Sector	155
4.4.1	Future Energy Networks	157
4.4.2	Hydrogen Technology.....	158
4.4.3	Fuel Cell Technology.....	160
5	Air Pollution Control	161
5.1	Origin of and Effects of Air Pollution	162
5.1.1	Origin of Contaminant Emissions	162
5.1.2	Contaminant Transport in the Atmosphere	166
5.1.3	Effects of Airborne Pollutants	168
5.1.4	Methods of Measuring Air Pollution	172
5.2	Industrial Air Pollution Control Methods	174
5.2.1	Air Pollution Emissions from Industrial Processes	175
5.2.2	Methods of Particulate Control.....	178
5.2.3	Minimization of Gaseous Emissions	180
5.3	Emission Reduction in Power Plants	183
5.3.1	Desulfurization	183
5.3.2	Nitrogen Oxide Reduction	186
5.3.3	Mass Flows and Flue Gas Composition	192
5.4	Reduction of Automobile Emissions	193
6	Water Pollution: Wastewater	197
6.1	Classification of Water Pollution.....	199
6.2	Wastewater and its Components.....	199
6.2.1	Collection and Discharge of Wastewater	199
6.2.2	The Municipal Sewage Treatment Plant	200
6.2.3	Calculation of BODs Municipal Sewage Treatment Plant Loads	203
6.2.4	Industrial Wastewater.....	203
6.3	Biological Wastewater Treatment	205
6.3.1	Conversion by Microorganisms	205
6.3.2	Trickling Filter Processes.....	208
6.3.3	Activated Sludge Processes	210
6.3.4	Removal of Phosphorus and Nitrogen	215
6.4	Chemical-Physical Wastewater Treatment	218
6.4.1	Precipitation of Heavy Metals	220
6.4.2	Flocculation	224

6.4.3	Liquid/Solid Separation	228
6.4.4	Treatment of Organic Compounds	229
6.5	Sludge Treatment	233
6.5.1	Anaerobic Wastewater and Sludge Treatment	233
6.5.2	Methods of Sludge Treatment	235
6.5.3	Sludge Dewatering and Sewage Sludge Incineration	236
7	Potable Water	239
7.1	Potable Water Supply	239
7.1.1	Water Consumption and Water Conservation Measures	240
7.1.2	Methods for Obtaining Potable Water	243
7.1.3	Materials Used in Distribution Systems	244
7.2	Raw and Potable Water Quality	245
7.2.1	Reactions in the Subsurface	248
7.2.2	Landfill Leachate and Other Seepage	250
7.2.3	Agricultural Runoff	253
7.2.4	Acid Rain Impact on Groundwater Quality	254
7.3	Potable Water Treatment Methods	255
7.3.1	Artificial Groundwater Recharge and Collector Wells	257
7.3.2	Treatment in Water Utilities	259
7.3.3	Comprehensive Potable Water Treatment	261
7.4	Future Safety and Availability of Water Supplies	264
8	Soil	269
8.1	Type and Extent of Substance Uptake in Soils	270
8.1.1	High Priority Contaminants	270
8.1.2	Soil Impacts : Heavy Metals	272
8.2	Behavior and Effects of Soil Contamination	275
8.2.1	Mobilization of Contaminants in Soils	275
8.2.2	Bio-Availability of Contaminants	278
8.2.3	Perspectives on Agricultural Soil	281
8.3	Problems Caused by Abandoned Contamination Sites	282
8.3.1	Remediation Goals	283
8.3.2	Evaluation of Abandoned Landfills and Other Contaminated Sites	286
8.3.3	Assessment of Abandoned Contamination Sites	289
8.4	Securing Abandoned Contamination Sites	291
8.4.1	Excavation and Removal	291
8.4.2	Barrier Systems	292
8.4.3	Solidification, Stabilization, and Inertization	295

8.5	Remediation of Abandoned Contamination Sites	300
8.5.1	Soil Vapor Extraction	303
8.5.2	Soil Washing and Flushing Methods	303
8.5.3	Biological Treatment	308
8.5.4	Thermal Treatment of Contaminated Soils.....	314
8.5.5	Innovative Treatment Technologies.....	318
8.6	Outlook.....	320

9 Waste 325

9.1	Fundamentals of Waste Management	325
9.1.1	Global and Regional Waste Streams.....	325
9.1.2	Waste Composition.....	327
9.1.3	Strategies of Preventive Waste Management	331
9.2	Waste Treatment	336
9.2.1	Treatment of Bulk Waste - Example: Excavated Material	336
9.2.2	Chemical-Physical Treatment of Industrial Waste.....	338
9.2.3	Treatment of Halogenated Organic Waste.....	340
9.3	Waste Incineration	342
9.3.1	Waste Incinerators	343
9.3.2	Flue Gas Scrubbing.....	347
9.3.3	Treatment of Residues	348
9.4	Landfilling	357
9.4.1	Elements and Development of Landfill Technology	358
9.4.2	Disposal of Untreated Municipal Waste	360
9.4.3	Landfill Gas and Leachate	363
9.4.4	Permanent Disposal	367
9.5	Summary and a Look Ahead.....	373

10 Recycling 375

10.1	Theory and Practice of Recycling	376
10.1.1	Theoretical Approaches	376
10.1.2	Industrial Waste Recovery	379
10.1.3	Scrap Automobile Recycling	380
10.2	Recycling of Organic Waste Fractions	381
10.2.1	Biogas from Anaerobic Fermentation	382
10.2.2	Composting	384
10.3	Recycling Mineral Detrital Matter	386
10.3.1	Material Recovery in the Building Industry	388
10.3.2	Recovery of Power Plant By-products	389

10.3.3	Recycling of Metals	393
10.4	Recycling of Plastics	395
10.4.1	Separation and Processing of Waste Plastics	397
10.4.2	Energy Balances	398
10.4.3	Plastics Recycling Techniques.....	400
10.4.4	Phased Recycling Concepts	403
10.5	Limits and Prespectives of Recycling.....	405
10.5.1	Material Flow Management.....	405
10.5.2	Reduction of Material Flows	406
10.5.3	Avoidance as the Primary Task of Pollution Control Technology	408
10.5.4	Additive and Integrated Environmental Technology (Pollution Control Technology).....	412
Appendix A		415
Appendix B		429
Appendix C		433
Appendix D		435
References and Further Reading		441
Subject Index.....		487
