

D. The Supply of Water by the Soil	132
E. The Loss of Water from Transpiring Leaves	136
F. Water Movement in Whole Plants	144
<b>Contents</b>	
III. Adaptations Favouring Survival in Dry Environments	150
IV. Adaptations Favouring Survival in Water Shortage	155
A. Acquisition of Water	156
B. Transpiration and Use of Water	158
C. Resistance of Dicotyledons	174
D. Contrasting Life-histories in Dicotyledons	176
V. Some Special Problems in Tree-Plant Relations	179
A. Vascular System	180
B. Leaves	183
C. Trunks	183
D. Roots	183
<b>PART I. INTRODUCTION</b>	
1. Introduction	v
A. Plant Growth	3
B. The Influence of the Environment	7
C. Population Responses	11
D. Adaptability and Adaptedness	16
<b>PART III. RESPONSES TO ENVIRONMENTAL STRESS</b>	
<b>PART II. THE ACQUISITION OF RESOURCES</b>	
2. Energy and Carbon	vii
I. The Radiation Environment	25
A. Radiation	25
B. Irradiance	26
C. Temporal Variation	29
D. Leaf Canopies	30
II. Effects of Spectral Distribution of Radiation on Plants	34
A. Ultra-violet Radiation	34
B. Germination	35
C. Morphogenesis	37
D. Photoperiodism	40
III. Effects of Irradiance on Plants	41
A. Patterns of Response	41
B. Responses to Low Irradiance	44
C. Photosynthesis at High Irradiance	58

### 3. Mineral Nutrients

I.	Introduction	66
II.	Nutrients in the Soil System	71
A.	Soil Diversity	71
B.	Concentrations	74
C.	Ion Exchange	75
D.	Cycles	79
E.	Transport	80
F.	Limiting Steps	86
III.	Physiology of Ion Uptake	88
A.	Kinetics	88
B.	Interactions	90
C.	Internal Control	92
D.	Demand	93
IV.	Morphological Responses	99
A.	Root : Shoot Ratio and Root : Weight Ratio	99
B.	Root Diameter and Root Hairs	100
C.	Root Density and Distribution	101
D.	Turn-over	106
V.	Soil Micro-organisms	107
A.	The Nature of the Rhizosphere	107
B.	Effects on Nutrient Uptake	109
C.	Nitrogen Fixation	110
D.	Mycorrhizas	112
VI.	General Patterns of Response to Soil Nutrients	118

### 4. Water

I.	Properties of Water	121
II.	The Water Relations of Plants and Soils	124
A.	Water Potential	124
B.	The Water Relations of Plant Cells	126
C.	The Influence of Water Stress on Plants and Plant Cells	128

D. The Supply of Water by the Soil . . . . .	132
E. The Loss of Water from Transpiring Leaves . . . . .	138
F. Water Movement in Whole Plants. . . . .	144
III. Adaptations Favouring Germination and Seedling Establishment in Dry Environments . . . . .	150
IV. Adaptations Favouring Survival and Reproduction Under Conditions of Water Shortage . . . . .	155
A. Acquisition of Water . . . . .	156
B. Conservation and Use of Water . . . . .	161
C. Tolerance of Desiccation . . . . .	174
D. Contrasting Life-histories in Arid Environments . . . . .	176
V. Some Special Problems in Tree/Water Relations . . . . .	179
A. Vascular System . . . . .	180
B. Leaves . . . . .	183

### PART III. RESPONSES TO ENVIRONMENTAL STRESS

#### 5. Temperature

I. The Temperature Relations of Plants . . . . .	187
A. Responses of Plant Species to Changes in the Thermal Environment. . . . .	193
B. The Energy Budget of a Plant Leaf . . . . .	195
II. Plant Adaptations and Resistance to Low Temperature . . . . .	197
A. The Influence of Low Temperature on Plants . . . . .	197
B. The Characteristic Features of Cold Climates—Arctic and Alpine Environments, Temperate Winters . . . . .	198
C. Adaptations Favouring Plant Growth and Development in Arctic and Alpine Regions . . . . .	202
D. Adaptations Favouring Survival of Cold Winters—Dormancy . . . . .	213
E. Adaptations Favouring Survival of Cold Winters—Plant Resistance to Freezing Injury . . . . .	215
III. Plant Adaptations and Resistance to High Temperatures . . . . .	220

**6. Ionic Toxicity**

I.	The Nature of Toxicity	225
A.	Salt-affected Soils	227
B.	Calcareous and Acid Soils	228
C.	Metal-contaminated Soils	231
II.	Effects of Toxins on Plants	231
A.	The Acquisition of Resources	232
B.	Utilization of Resources	236
III.	Resistance to Toxicity	238
A.	Escape Mechanisms	238
B.	Exclusion	242
C.	Amelioration	247
D.	Tolerance	257
IV.	The Origins of Resistance	257

**7. Gaseous Toxicity**

I.	Anaerobiosis in Soils	260
A.	The Effects of Anoxia on Plant Roots	261
B.	Plant Adaptations Favouring Survival and Growth in Waterlogged soils	265
C.	Imperfectly-drained Soils and Soils with Anaerobic Microsites	276
D.	Plant Responses to Exogenous Ethylene in the Soil Atmosphere	279
II.	Aerial Pollution	283
A.	Sources and Levels of Pollutant Gases	283
B.	The Influence of Gaseous Aerial Pollution on Plants	284
C.	Plant Resistance to Air Pollution	294
D.	The Influence of Acidic Deposition on Plants	295

**8. Interactions Between Organisms**

I.	Introduction	300
----	--------------	-----

II.	Competition . . . . .	301
A.	Competitive Superiority . . . . .	302
B.	The Occurrence, Extent and Ecological Effects of Competition . . . . .	311
III.	Predation and Parasitism . . . . .	314
A.	Nature of Attack . . . . .	315
B.	Plant Defences . . . . .	318
C.	Plant Responses . . . . .	324
IV.	Allelopathy . . . . .	325
A.	Mechanisms . . . . .	327
B.	Allelopathy in Perspective . . . . .	328

## 9. An Ecological Perspective

I.	Allocation . . . . .	330
II.	Strategies . . . . .	333
III.	Communities . . . . .	338
IV.	Dynamics . . . . .	341
