Foreword xi

Preface xiii

1. Biohydrogen Production: An Introduction

S. VENKATA MOHAN AND ASHOK PANDEY

- Essentials of Energy 1
- Hydrogen 2
- Transition Toward Bioenergy 3
- Genesis of Biological H₂ Production 3
- Scientometric Evaluation of the Research on Biohydrogen 14
- Waste as Renewable Feedstock/Substrate for Biohydrogen Production 15
- Biocatalyst for Biohydrogen Production 17
- Prospects of Biohydrogen Domain 17

2. Fundamentals of Biohydrogen

PATRICK C. HALLENBECK

- Introduction 25
- Enzymes 26
- Overview of Hydrogen-producing Systems 27
- Tools 36
- Conclusion 39

3. Metabolic Engineering of Microorganisms for Biohydrogen Production

YOU-KWAN OH, SUBRAMANIAN MOHAN RAJ, GYOO YEOL JUNG, AND SUNGHOON PARK

- Introduction 45
- Biophotolysis 46
- Photofermentation 48
- Dark Fermentation 52
- Perspectives and Future Directions 60

4. Insurmountable Hurdles for Fermentative H₂ Production?

PATRIK R. JONES AND M. KALIM AKHTAR

- The First Hurdle is the Thermodynamic Limitation 67
- The Second Hurdle is Incomplete Oxidation of Substrate 70
- Engineering H₂ Pathways with Maximum Capability 71
- Conclusion 72

5. Hydrogenase

PHILIPPE CONSTANT AND PATRICK C. HALLENBECK

- Introduction 75
- Three Distinct Classes of Hydrogenases 76
- [NiFe]-Hydrogenases 77
- [Fe]-Hydrogenases 87
- [FeFe]-Hydrogenases 88
- Conclusion 96

6. Biohydrogen Production from Organic Wastes by Dark Fermentation

G. BALACHANDAR, NAMITA KHANNA AND DEBABRATA DAS

- Introduction 103
- Microbiology of Dark Fermentative Bacteria 106
- Biochemistry of Dark Fermentative Hydrogen Production 109
- Thermodynamics of Biohydrogen Production Processes 111
- Molecular Biology of Key Enzymes Involved in Dark Fermentation Process 113
- Factors Affecting the Biohydrogen Process 116
- Biohydrogen Production from Wastes 119
- Reactor Configurations and Operation 130
- Challenges 134
- Conclusion 135

7. Photofermentative Biohydrogen Production

PATRICK C. HALLENBECK

Introduction	145
Photofermentative Organisms and Metabolic Pathways	146
Different Photofermentation Bioprocesses	149
Strategies for Improving Photofermentation	154
Conclusion	155

8. Biohydrogen Production from Algae

MAN KEE LAM AND KEAT TEONG LEE

Introduction	161
Biohydrogen Generation by Microalgae	162
Life Cycle Assessment (LCA) of H ₂ Production from Microalgae	172
Conclusions	179

9. Biohydrogen from Renewable Resources

GANESH D. SARATALE, RIJUTA G. SARATALE, AND JO-SHU CHANG

Introduction	185
Renewable Resources for Biohydrogen Production	190
Pretreatment of Biomass and Organic Wastes into Converting Renewable Resources into Biohydrogen	191
Key Issues on Biohydrogen Conversion Technologies Using Biomass and Wastes	207
Economics of Biohydrogen Production and Perspectives	210
Concluding Remarks	212

10. Biohydrogen Production from Wastewater

S. VENKATA MOHAN, K. CHANDRASEKHAR, P. CHIRANJEEVI, AND P. SURESH BABU

Introduction	223
Wastewater as Renewable Substrate for Biohydrogen Production	224
Mixed Consortia as Biocatalyst	230
Factors Influencing Fermentative H ₂ Production	233

Regulatory Function of Trace Metals on Fermentative H ₂ Production	237
Process Limitations	240
Strategies to Enhance Process Efficiency	241
Future Outlook	246

11. Fermentative Biohydrogen Production from Solid Wastes

MI-SUN KIM, JAEHWAN CHA, AND DONG-HOON KIM

Introduction	259
Characteristics of Organic Solid Wastes for Hydrogen Production	262
Biohydrogen Production from Organic Solid Wastes	263
Strategies for Enhancing Hydrogen Production from Solid Wastes	267
Reactor Configuration	276
Conclusion	278

12. Thermochemical Route for Biohydrogen Production

THALLADA BHASKAR, BHAVYA BALAGURUMURTHY, RAWEL SINGH, AND MUKESH KUMAR PODDAR

Introduction	285
Hydrogen Production from Fossil Fuels	286
Methods of Hydrogen Production From Renewable Sources	287
Feedstocks for Thermochemical Methods of Hydrogen Production	289
Thermochemical Methods of Conversion	289
Exergy and Economic Issues	309
Opportunities and Challenges	310

13. Bioreactor and Bioprocess Design for Biohydrogen Production

KUAN-YEOW SHOW AND DUU-JONG LEE

Introduction	317
Pathways of Biohydrogen Production	318
Hydrogen-Producing Microorganisms	321
Process Design of Biohydrogen Production	324
Biohydrogen Reactor Systems	327
Challenges and the Way Forward	330
Conclusions	331

14. Scale-up and Commercial Applications of Biohydrogen Production Processes

BISWARUP SEN, CHEN-YEON CHU, AND CHIU-YUE LIN

Introduction 339

Technoeconomic Evaluation of Biohydrogen
Production Process 341

Fundamentals of Biohydrogen Production Process

Scale-up 343

Commercial Application of Biohydrogen Production
Processes 346

Summary 350

Index 353
