Chapter 1

Characteristics and Activities of Sulfate-Reducing Bacteria	1
--	----------

Larry L. Barton and Francisco A. Tomei

1. Introduction	1
2. Diversity of Bacteria	2
2.1. Biology	2
2.2. Cell Characteristics	2
3. Growth	3
3.1. Cultivation	3
3.2. Stress Response	6
3.3. Identification	7
3.4. Isolation	7
3.5. Detection	8
4. Biochemical Activities	8
4.1. Enzymes	8
4.2. Immobilization of Enzymes	9
4.3. Metabolic Products	9
4.4. Transformation Reaction	15
4.5. Energy Technology	18
5. Interactions with Plants and Animals	20
6. Perspectives	22
References	22

Chapter 2

Sulfate-Reducing Archaea	33
---------------------------------------	-----------

Rudolf K. Thauer and Jasper Kunow

1. Introduction: Discovery of <i>Archaeoglobus</i>	33
2. Phylogenetic Position among the Archaea	34

3. Morphology and Components of Cellular Structures	37
4. Habitats and Growth Requirements	38
5. Coenzymes, Enzymes, and Metabolic Pathways	39
5.1. Coenzymes	39
5.2. Enzymes	40
5.3. Metabolic Pathways	43
6. Assimilatory Sulfate Reduction in Archaea	43
References	45

Chapter 3

Taxonomic Relationships	49
--------------------------------------	-----------

Erko Stackebrandt, David A. Stahl, and Richard Devereux

1. Introduction	49
2. Traditional Classification	51
2.1. The Mesophilic Gram-Negative Sulfate Reducers ...	53
2.2. The Thermophilic Gram-Negative Sulfate Reducers	57
2.3. The Gram-Positive Sulfate Reducers	59
2.4. The Archaeal Sulfate Reducers	60
3. The Phylogeny of the Mesophilic Gram-Negative Bacterial Sulfate-Reducers	61
3.1. The Family " <i>Desulfovibrionaceae</i> "	63
3.2. The Family " <i>Desulfobacteriaceae</i> "	64
4. The Phylogeny of the Thermophilic Gram-Negative Bacteria	65
5. The Phylogeny of the Gram-Positive Sulfate Reducers	66
6. The Phylogeny of the Archaeal Sulfur Reducers	69
7. The Analysis of Genetic Markers other than the 16S rDNA	70
7.1. Ferredoxin	71
7.2. Cytochrome <i>c</i>	72
7.3. Hydrogenases	72
8. Determinative Tools and New Developments	73
8.1. Lipid Biomarkers	73
8.2. The Use of Nucleic Acid Hybridization for Determinative Studies	74
8.3. Gene Probes	75
9. Origin and Evolution of Sulfate-Reducing Bacteria in Relationship to the Biosphere	77
10. Uncultured Novel Sulfate-Reducing Bacteria	78

10.1. Greigite Magnetosomes	78
10.2. Hyperthermophilic Sulfate-Reducing Bacteria	79
References	79

Chapter 4

Respiratory Sulfate Reduction	89
--	-----------

J. M. Akagi

1. Introduction	89
2. Activation of Sulfate and Its Reduction to Bisulfate	89
2.1. Adenylyl Sulfate (APS) Formation	89
2.2. Reduction of APS to AMP and Bisulfate	90
3. Bisulfate Reduction	91
3.1. Detection of Trithionate and Thiosulfate in Reaction Mixtures	91
3.2. Bisulfate Reductase	92
4. The Trithionate Pathway	94
4.1. Trithionate Reductase(s)	98
4.2. Thiosulfate Reductase	99
4.3. Bisulfite Reduction by Cell Extracts and Whole Cells ...	100
4.4. Role of Membranes in Bisulfite Reduction	101
5. Direct Six-Electron Reduction Mechanism	101
5.1. Proton Translocation Studies	103
5.2. Siroheme and Tetrahydroporphyrin	104
5.3. Dithionite as a Possible Intermediate	104
5.4. Is Assimilatory Bisulfate Reductase Involved?	105
6. Concluding Remarks	106
References	108

Chapter 5

Characterization of Electron Transfer Proteins	113
---	------------

Liang Chen, Ming-Y. Liu, and Jean Le Gall

1. Introduction	113
2. Methods of Characterization	114
2.1. Prosthetic Groups	114

2.2. Apo-Proteins	115
2.3. Native, Reconstituted, and Modified Proteins	116
3. Individual Electron Transfer Proteins	116
3.1. Non-Heme Iron Proteins	116
3.2. Flavoproteins	124
3.3. Cytochromes	126
4. Reconstitution of Electron Transfer Chains	129
4.1. Protein Localization and Reconstitution with Soluble and/or Solubilized Proteins	129
4.2. Spheroplasts, Membrane Preparations, with or without Addition of Soluble Proteins	134
4.3. Protein-Protein Interactions: Computer Modeling	134
4.4. Molecular Biology	135
References	137

Chapter 6

Solute Transport and Cell Energetics	151
---	------------

Heribert Cypionka

1. Introduction	151
1.1. Thermodynamics of Dissimilatory Sulfate Reduction ...	151
1.2. Some Relevant Properties of Sulfate, Sulfide, and Sulfite	152
1.3. Scalar and Vectorial Processes	153
1.4. A First Look at Proton Effects Coupled to Sulfate Reduction	155
2. Sulfate Transport	156
2.1. Different Feasible Mechanisms of Sulfate Transport	156
2.2. Sulfate Accumulation by Symport with Protons	157
2.3. Sodium-Dependent Sulfate Accumulation by Marine Sulfate Reducers	158
2.4. Calculation of Steady State Sulfate Accumulation	158
2.5. Correlation of Proton Potential and Sulfate Accumulation	159
2.6. Stoichiometry of Sulfate Symport with Sodium Ions	160
2.7. Regulation of Sulfate Transport	160
2.8. Transport of Thiosulfate and other Sulfate Analogs	161
2.9. Assessment of the Energy Requirement for Sulfate Transport	162

3. Energetics of Sulfate Activation	164
3.1. Energy Coupling of Pyrophosphatase or APS Reductase	165
4. Energetics of Sulfite Reduction	166
5. Generation of a Protonmotive Force	168
5.1. Hydrogen Cycling	168
5.2. Proton Release by Periplasmic Hydrogenase and by Translocation	169
6. Comprehensive Assessment of the Energetics of Sulfate Reduction	171
7. Energy Conservation by Processes other than Sulfate Reduction	173
7.1. Fermentation of Organic Substrates	174
7.2. Disproportionation of Sulfur Compounds	174
7.3. Energy Conservation by Reduction of Nitrate	175
7.4. Energy Conservation by Aerobic Respiration	177
8. Conclusion	179
References	179

Chapter 7

Molecular Biology of Redox-Active Metal Proteins from <i>Desulfovibrio</i>	185
---	-----

Walter M. A. M. van Dongen

1. Introduction	185
2. <i>Desulfovibrio</i> Genetics	187
2.1. The Genome	187
2.2. Plasmids	187
2.3. Phages	188
3. Transfer of Broad-Host-Range Plasmids to <i>Desulfovibrio</i> : A Basic Step for Genetic Manipulation	188
3.1. IncQ Plasmids for Gene Cloning in <i>Desulfovibrio</i>	188
3.2. Applications of Gene Cloning in <i>Desulfovibrio</i>	190
4. Molecular Biology as a Tool for Analysis of Redox-Active Metal Proteins	191
4.1. Hydrogenases	192
4.2. Proteins with Novel Fe-S Clusters: Prismane Protein and Dissimilatory Sulfite Reductase	202
4.3. Cytochromes	204

xiv CONTENTS

5. Perspectives	207
References	208

Chapter 8

Ecology of Sulfate-Reducing Bacteria	217
---	------------

Guy D. Fauque

1. Introduction	217
2. Processes in the Anaerobic Degradation of Organic Matter ..	218
3. The Biological Sulfur Cycle	218
3.1. The Sulfuretum	220
3.2. Microorganisms Involved in the Sulfur Cycle	221
4. Sulfate Reduction in Natural Habitats	223
4.1. Gram-Negative Mesophilic Sulfate Reducers	224
4.2. Gram-Positive Sporeforming Sulfate Reducers	225
4.3. Gram-Negative Thermophilic Eubacterial Sulfate Reducers	226
4.4. Gram-Negative Thermophilic Archaeobacterial Sulfate Reducers	227
5. Effects of Environmental Factors on Growth of Sulfate-Reducing Bacteria	227
5.1. Effect of pH, Temperature, and Salts	228
5.2. Aerobic Sulfate Reduction	230
6. Growth in Phototrophic Associations	232
7. Interactions with Methanogenic Bacteria	233
7.1. Synergism: Interspecies Hydrogen Transfer	233
7.2. Competition	234
8. Conclusion	234
References	235

Chapter 9

Biocorrosion	243
---------------------------	------------

W. Allan Hamilton and Whonchee Lee

1. Introduction	243
2. Corrosion	244

2.1. Abiotic Corrosion	244
2.2. Microbially Influenced Corrosion	247
3. Conclusions	260
References	262

Chapter 10

Control in Industrial Settings	265
---	------------

T. R. Jack and D. W. S. Westlake

1. Introduction	265
1.1. <i>In Situ</i> Microbial Activity	265
1.2. Microbial Activities in Surface Facilities	266
2. Management	266
2.1. Cathodic Protection and Coatings to Reduce Corrosion	266
2.2. Changes in the Environment	268
2.3. Control with Biocides	270
3. Biocide Application	273
3.1. Bacterial Detection Systems	273
3.2. Screening of Biocide Products	274
3.3. Biocide Dosages	276
3.4. Factors Affecting Biocide Activity	277
3.5. Field Expectations	280
3.6. Improving Biocide Performance	281
4. Miscellaneous Control Options	282
4.1. Heat Shock	282
4.2. Ice Nucleation	282
4.3. Manipulation of Microbial Growth Patterns	282
5. Oil Reservoir Souring	283
6. Future Needs	285
6.1. Correlation of Biological Parameters to Corrosion Risk	285
6.2. Relating Corrosion Mechanisms and Bacterial Populations	285
7. Recommendations	286
7.1. Treatment Chemicals	286
7.2. Understanding Biofilm Communities	286
8. Summary	288
References	289

Chapter 11

Metabolism of Environmental Contaminants by Mixed and Pure Cultures of Sulfate-Reducing Bacteria	293
---	------------

Burt D. Ensley and Joseph M. Suflita

1. Introduction	293
2. Metabolism of Nonhalogenated Compounds by Mixed Culture	303
3. Metabolism of Nonhalogenated Compounds by Pure Cultures	311
4. Metabolism of Halogenated Compounds by Isolates and Mixed Cultures	317
5. Perspectives	326
References	327
Index	333
