

# Contents in Brief

Preface	ix
Contents in Detail	xvii
About the Authors	xxviii

## **I Why Conservation Is Needed**

- 1 Humans Are the Dominant Ecological Force 1
- 2 Biodiversity and Extinction 23
- 3 Ecosystem Services: How Nature Pays for Itself 52

## **II Policy, Protected Areas, and Planning**

- 4 Policy Responses to Biodiversity Loss and Ecosystem Degradation 81
- 5 Conservation in Protected Areas and on Private Land 110
- 6 Conservation Planning and Priorities 132

## **III How Science Informs Conservation Strategies**

- 7 The Perils of Small Populations 157

- 8 Population Size, Trend, and Viability 181
- 9 Assessing Threats and Choosing Conservation Actions 210
- 10 Islands of Nature and the Role of Dispersal 241
- 11 Restoration and Reintroduction: Fixing Problems After the Fact 272
- 12 Adaptive Management and Evidence-Based Conservation 297

## **IV Conservation Challenges in a World Shaped by Humans**

- 13 Reversing Global Deforestation and Forest Degradation 316
  - 14 Balancing Agriculture and Conservation 340
  - 15 Building Sustainable Marine Fisheries 366
  - 16 Managing Fresh Water for People and Nature 388
  - 17 Getting Practical about Introduced Species 412
  - 18 Climate Change on a Global Scale 435
  - 19 Making Conservation a Success Story 462
- Glossary 481
- References Cited 490
- Photo Credits 519
- Index 523
