

(Photo by Eugene Weiner)

*Even without human intervention, pollutant concentrations in the environment have a tendency to diminish with time due to natural causes. Where natural processes are fast enough and contaminant concentrations small enough, the simplest approach to remediation is to wait until pollutant levels are no longer deemed hazardous.*

Chapter 2, Section 2.3.1

# Contents

Preface to the Third Edition .....	xxiii
Preface to the Second Edition.....	xxv
Preface to the First Edition .....	xxv
Acknowledgments.....	xxvii
Author .....	xxix
<b>Chapter 1</b> Water Quality .....	1
1.1 Defining Environmental Water Quality .....	1
1.1.1 Water-Use Classifications and Water Quality Standards.....	2
1.1.2 Water Quality Classifications and Standards for Natural Waters.....	4
1.1.3 Setting Numerical Water Quality Standards.....	5
1.1.4 Typical Water-Use Classifications.....	6
1.1.5 Staying Up-to-Date with Standards and Other Regulations.....	9
1.2 Sources of Water Impurities .....	10
1.2.1 Natural Sources .....	10
1.2.2 Human-Caused Sources .....	10
1.3 Measuring Impurities .....	11
1.3.1 What Impurities Are Present?.....	11

1.3.2	How Do Impurities Influence Water Quality? .....	12
1.3.3	How Much of Each Impurity Is Present? .....	12
1.3.4	Working with Concentrations .....	12
1.3.4	Moles and Molar Concentrations .....	17
1.3.5	Case Study .....	22
1.3.6	Equivalents and Equivalent Weights .....	24
<b>Chapter 2</b>	<b>Contaminant Behavior in the Environment:</b>	
	Basic Principles .....	31
2.1	Behavior of Contaminants in Natural Waters .....	31
2.1.1	Important Properties of Pollutants .....	33
2.1.2	Important Properties of Water and Soil .....	33
2.2	What Are the Fates of Different Pollutants? .....	34
2.3	Processes That Remove Pollutants from Water .....	35
2.3.1	Natural Attenuation .....	35
2.3.2	Transport Processes .....	35
2.3.3	Environmental Chemical Reactions .....	36
2.3.4	Environmental Biological Processes .....	38
2.4	Some Major Contaminant Groups and Natural Pathways for Their Removal from Water .....	39
2.4.1	Metals .....	39
2.4.2	Chlorinated Pesticides .....	39
2.4.3	Halogenated Aliphatic Hydrocarbons .....	39
2.4.4	Fuel Hydrocarbons .....	40
2.4.5	Inorganic Nonmetal Species .....	40
2.5	Chemical and Physical Reactions in the Water Environment .....	40
2.6	Partitioning Behavior of Pollutants .....	41
2.6.1	Partitioning from a Diesel Oil Spill .....	41
2.7	Intermolecular Forces .....	44
2.7.1	Temperature-Dependent Phase Changes .....	44
2.7.2	Volatility, Solubility, and Sorption .....	45
2.7.3	Predicting Relative Attractive Forces .....	45
2.8	Origins of Intermolecular Forces: Electronegativities, Chemical Bonds, and Molecular Geometry .....	46
2.8.1	Chemical Bonds .....	46
2.8.2	Chemical Bond Dipole Moments .....	50
2.8.3	Molecular Geometry and Molecular Polarity .....	50
2.8.4	Examples of Nonpolar Molecules with Polar Bonds .....	51
2.8.5	Examples of Polar Molecules .....	52
2.8.6	The Nature of Intermolecular Attractions .....	53
2.8.7	Comparative Strengths of Nonpolar Intermolecular Attractions .....	55

2.9	Solubility and Intermolecular Attractions.....	57
2.9.1	Solubility and Other Phase Changes Result When Unbalanced Intermolecular Forces Seek an Equilibrium .....	60
	Reference.....	62
<b>Chapter 3</b>	<b>Major Water Quality Parameters and Applications .....</b>	<b>63</b>
3.1	Interactions Among Water Quality Parameters .....	63
3.2	pH .....	64
3.2.1	Background .....	64
3.2.2	Defining pH.....	68
3.2.3	Importance of pH .....	70
3.2.4	Measuring pH.....	71
3.2.5	Water Quality Criteria and Standards for pH.....	72
3.3	Carbon Dioxide, Bicarbonate, and Carbonate.....	73
3.3.1	Background .....	73
3.3.2	Solubility of CO <sub>2</sub> in Water .....	74
3.3.3	Soil CO <sub>2</sub> .....	75
3.4	Acidity and Alkalinity.....	76
3.4.1	Background .....	76
3.4.2	Acidity .....	77
3.4.3	Alkalinity .....	77
3.4.4	Importance of Alkalinity .....	79
3.4.5	Water Quality Criteria and Standards for Alkalinity .....	79
3.4.6	Calculating Alkalinity.....	80
3.4.7	Calculating Changes in Alkalinity, Carbonate, and pH .....	81
3.5	Oxidation–Reduction Potential (ORP).....	86
3.5.1	Background .....	86
3.5.2	Case Study: Treating Foul Odors from an Urban Marsh.....	88
3.5.3	Oxidation–Reduction Potential as a Control Indicator in Wastewater Treatment .....	90
3.6	Hardness .....	90
3.6.1	Background .....	90
3.6.2	Importance of Hardness .....	91
3.6.3	Calculating Hardness .....	93
3.7	Dissolved Oxygen.....	94
3.7.1	Background .....	94
3.8	Biochemical Oxygen Demand and Chemical Oxygen Demand .....	98
3.8.1	Biochemical Oxygen Demand.....	98
3.8.2	Carbonaceous Biochemical Oxygen Demand.....	98

3.8.3	Nitrogenous Biochemical Oxygen Demand .....	99
3.8.4	BOD <sub>5</sub> and CBOD <sub>5</sub> .....	99
3.8.5	CBOD Calculation .....	100
3.8.6	Chemical Oxygen Demand .....	101
3.8.7	COD Calculation .....	102
3.9	Solids (Total, Suspended, and Dissolved) .....	102
3.9.1	Background .....	102
3.9.2	Total Suspended Solids and Turbidity .....	103
3.9.3	Total Dissolved Solids and Salinity .....	105
3.9.4	Electrical Conductivity and TDS .....	105
3.9.5	TDS Test for Analytical Reliability .....	108
3.10	Temperature .....	109
3.11	Drinking Water Treatment .....	109
3.11.1	Water Sources .....	110
3.11.2	Water Treatment .....	111
3.11.3	Basic Drinking Water Treatment .....	111
3.11.3.1	Primary Settling .....	111
3.11.3.2	Aeration .....	112
3.11.3.3	Coagulation .....	112
3.11.3.4	Disinfection .....	112
3.11.4	Disinfection Procedures .....	112
3.11.4.1	Chlorine Disinfection .....	113
3.11.4.2	Hypochlorite .....	115
3.11.4.3	Definitions .....	116
3.11.5	Side Effects of Disinfection: Disinfection Byproducts .....	116
3.11.5.1	Trihalomethanes and Haloacetic Acids ....	117
3.11.5.2	Strategies for Controlling Disinfection Byproducts .....	119
3.11.5.3	Regulation of Disinfection Byproducts .....	119
3.11.5.4	Chlorinated Phenols .....	121
3.11.5.5	Chloramines .....	122
3.11.5.6	Chlorine Dioxide Disinfection Treatment .....	123
3.11.6	Non-Chlorine-Based Water Treatments That Also Provide Disinfection .....	123
3.11.6.1	Ozone Disinfection Treatment .....	124
3.11.6.2	Ozone Disinfection Byproducts .....	125
3.11.6.3	Potassium Permanganate .....	125
3.11.6.4	Peroxone (Ozone Plus Hydrogen Peroxide) .....	126
3.11.6.5	Ultraviolet Disinfection Treatment .....	126
3.11.6.6	Characteristics of UV Treatment .....	127
3.11.6.7	Membrane Filtration Water Treatment .....	127
3.11.6.8	Reverse Osmosis .....	129

4.3.7.2	Phosphorus Cycling in Agricultural Areas.....	158
4.3.7.3	Phosphorus Cycling in Urban Areas .....	158
4.3.7.4	Phosphorus Cycling in Watersheds with Mixed Forest, Agricultural, and Urban Land Uses .....	159
4.4	Nutrient (N and P) Contamination: Eutrophication and Algae Problems .....	160
4.4.1	Algal Blooms.....	162
4.4.1.1	Health Impacts from Cyanobacteria (Blue-Green Algae).....	162
4.4.1.2	Water Treatment for Microcystins from Cyanobacteria.....	162
4.4.2	Case Study 3: Causes and Limitations of Algal Growth in Streams .....	164
4.4.3	Case Study 4: Conditions Favoring Nitrogen over Phosphorus as the Limiting Nutrient .....	165
4.5	Sulfide ( $S^{2-}$ ) and Hydrogen Sulfide ( $H_2S$ ) .....	167
4.5.1	Background .....	167
4.5.2	Sources .....	168
4.5.3	Formation of $H_2S$ in Wells, Detention Ponds, Wetlands, and Sewers.....	170
4.5.4	Hydrogen Sulfide Odor.....	171
4.5.5	Removing Dissolved Sulfides and $H_2S$ Gas from Water.....	171
4.5.6	Case Study 5: Treating Odorous Water Wells Infected with SRB by Shock Chlorination.....	173
4.5.7	Toxicity and Regulation of $H_2S$ .....	174
4.5.7.1	Typical State Stream Standards for Undissociated $H_2S$ .....	174
4.5.7.2	Health Effects .....	174
4.6	Odors of Biological Origin in Water (Mostly from Hydrogen Sulfide and Ammonia Products).....	175
4.6.1	Chemical Control of Odors .....	175
4.6.1.1	pH Control .....	175
4.6.1.2	Oxidation .....	179
4.6.1.3	Eliminate Reducing Conditions Caused by Decomposing Organic Matter .....	179
4.6.1.4	Sorption to Activated Charcoal .....	179
	References.....	180

## **Chapter 5** Behavior of Metal Species in the Natural Environment ..... 181

5.1	Metals in Water .....	181
5.2	Mobility of Metals in Water/Soil Environments .....	184

5.3	General Behavior of Dissolved Metals	
	In Water.....	185
5.3.1	The Example of Iron.....	185
5.3.2	Predicting Metal Solubilities.....	188
5.3.3	Four Important Things to Know about Metal Behavior in Water.....	189
5.3.4	Hydrolysis Reactions.....	190
5.3.5	Hydrated Metals as Acids.....	192
5.3.6	Influence of pH on the Solubility of Metals.....	193
5.3.7	Amphoteric Behavior.....	194
5.4	Adjusting pH to Remove Metals from Water by Precipitation.....	198
5.4.1	Hydroxide Precipitation.....	198
5.4.2	Carbonate Precipitation.....	199
5.4.3	Sulfide Precipitation.....	200
5.5	Your Results May Vary.....	200
5.6	How ORP Affects the Solubility of Metals.....	202
5.6.1	ORP and pH Are Interactive.....	203
5.7	ORP-Sensitive and ORP-Insensitive Metals.....	203
5.7.1	Common ORP-Sensitive Metals: Chromium, Copper, Iron, Manganese, Mercury, Molybdenum, Thallium, Uranium, and Vanadium.....	203
5.7.2	Common ORP-Insensitive Metals: Aluminum, Barium, Cadmium, Lead, Nickel, and Zinc.....	204
5.7.3	Common ORP-Sensitive Metalloids: Arsenic and Selenium.....	205
5.8	Metal Water Quality Standards.....	205
5.9	Applications.....	208
5.9.1	Case Study 1: Acid Rock Drainage.....	208
5.9.1.1	Summary of Acid Formation in ARD.....	209
5.9.1.2	Noniron Metal Sulfides Do Not Generate Acidity.....	211
5.9.1.3	Acid-Neutralizing Potential of Soil.....	211
5.9.1.4	Determining the Acid-Neutralizing Potential.....	212
5.9.2	Case Study 2: In Situ Stabilization of Metal Contaminants in Soils.....	213
5.9.3	Case Study 3: Treatment of Metal-Contaminated Groundwater with a Sulfate-Reducing Permeable Reactive Barrier.....	215
5.9.4	Case Study 4: Identifying Metal Loss and Gain Mechanisms in a Stream.....	218
	References.....	221

<b>Chapter 6</b>	Soil, Groundwater, and Subsurface Contamination.....	223
6.1	Nature of Soils.....	223
6.1.1	Soil Formation.....	223
6.1.1.1	Physical Weathering.....	224
6.1.1.2	Chemical and Biological Weathering.....	224
6.1.1.3	Secondary Mineral Formation.....	224
6.1.1.4	Roles of Plants and Soil Organisms.....	224
6.2	Soil Profiles.....	225
6.2.1	Soil Horizons.....	226
6.2.2	Successive Steps in the Typical Development of a Soil and Its Profile (Pedogenesis).....	226
6.3	Organic Matter in Soil.....	227
6.3.1	Humic Substances.....	228
6.3.2	Some Properties of Humic Materials.....	228
6.3.2.1	Binding to Dissolved Species.....	228
6.3.2.2	Light Absorption.....	229
6.4	Soil Zones.....	229
6.4.1	Air in Soil.....	230
6.5	Contaminants Become Distributed in Water, Soil, and Air.....	231
6.5.1	Volatilization.....	231
6.5.2	Sorption.....	232
6.6	Partition Coefficients.....	232
6.6.1	Air–Water Partition Coefficient (Henry’s Law).....	233
6.6.2	Soil–Water Partition Coefficient and the Freundlich Isotherm.....	241
6.6.3	Determining $K_D$ Experimentally with the Freundlich Isotherm.....	242
6.6.4	Role of Soil Organic Matter.....	244
6.6.5	Octanol–Water Partition Coefficient, $K_{OW}$ .....	246
6.6.6	Estimating $K_D$ Using Measured Solubility or $K_{OW}$ .....	247
6.7	Mobility of Contaminants in the Subsurface.....	252
6.7.1	Retardation Factor.....	254
6.7.2	Effect of Biodegradation on Effective Retardation Factor.....	255
6.7.3	A Model for Sorption and Retardation: Why Pump-and-Treat May Not Work.....	258
6.7.3.1	A Two-Step Conceptual Model for Sorption.....	258
6.7.4	Soil Properties.....	259
6.8	Particulate Transport in Groundwater: Colloids.....	261
6.8.1	Colloid Particle Size and Surface Area.....	261
6.8.2	Particle Transport Properties.....	261

6.8.3	Electrical Charges on Colloids and Soil Surfaces.....	262
6.8.3.1	Electrical Double Layer.....	262
6.8.3.2	Sorption and Coagulation.....	262
6.9	Case Study: Clearing Muddy Ponds.....	264
6.9.1	Pilot Jar Tests.....	266
6.9.1.1	Jar Test Procedure with Alum Coagulant.....	266
6.9.1.2	Jar Test Procedure with Gypsum Coagulant.....	267
6.10	Ion Exchange.....	268
6.10.1	Why Do Solids in Nature Carry a Surface Charge?.....	268
6.10.2	Cation- and Anion-Exchange Capacity.....	269
6.10.3	Exchangeable Bases: Percent Base Saturation.....	270
6.10.4	CEC in Clays.....	272
6.10.5	CEC in Organic Matter.....	273
6.10.6	Rates of Cation Exchange.....	273
6.11	Agricultural Water Quality.....	274
6.11.1	Salinity.....	274
6.11.2	Specific Ion Toxicity.....	277
6.11.3	Nutrient Imbalance.....	277
6.11.4	Irrigation Water Quality Guidelines.....	278
6.11.5	Low Infiltration Rate (High Relative Sodium and Low Salinity).....	278
6.11.5.1	Sodium Adsorption Ratio.....	279
6.11.5.2	Adjusted Sodium Adsorption Ratio.....	280
6.11.5.3	Calculation of Adjusted Sodium Adsorption Ratios.....	281
6.11.5.4	What SAR Values Are Acceptable?.....	282
6.11.6	Case Study: Changes over Time in SAR of Coal-Bed Methane–Produced Water.....	289
	References.....	291

**Chapter 7** General Properties of Nonaqueous Phase Liquids and the Behavior of Light Nonaqueous Phase Liquids in the Subsurface .... 293

7.1	Types and Properties of Nonaqueous Phase Liquids.....	293
7.2	General Characteristics of Petroleum Liquids: The Most Common LNAPL.....	295
7.2.1	Types of Petroleum Products.....	295
7.2.2	Gasoline.....	296
7.2.3	Middle Distillates.....	298
7.2.4	Heavier Fuel Oils and Lubricating Oils.....	298

- 7.3 Behavior of Petroleum Hydrocarbons in the Subsurface ..... 298
  - 7.3.1 Soil Zones and Pore Space ..... 298
  - 7.3.2 Partitioning of Light Nonaqueous Phase Liquids in the Subsurface ..... 300
  - 7.3.3 Processes of Subsurface Migration ..... 301
  - 7.3.4 Petroleum Mobility through Soils ..... 301
  - 7.3.5 Behavior of LNAPL in Soils and Groundwater ..... 302
  - 7.3.6 Summary: Behavior of Spilled LNAPL ..... 304
  - 7.3.7 Weathering of Subsurface Contaminants ..... 304
  - 7.3.8 Petroleum Mobility and Solubility ..... 305
- 7.4 Formation of Petroleum Contamination Plumes ..... 306
  - 7.4.1 Dissolved Contaminant Plume ..... 308
  - 7.4.2 Vapor Contaminant Plume ..... 309
- 7.5 Estimating the Amount of LNAPL-Free Product in the Subsurface ..... 310
  - 7.5.1 How LNAPL Layer Thickness in the Subsurface Affects LNAPL Layer Thickness in a Well ..... 314
    - 7.5.1.1 Effect of Soil Texture on LNAPL in the Subsurface and in Wells ..... 314
    - 7.5.1.2 Effect of Water Table Fluctuations on LNAPL in the Subsurface and in Wells ..... 315
    - 7.5.1.3 Effect of Water Table Fluctuations on LNAPL Measurements in Wells ..... 315
- 7.6 Estimating the Amount of Residual LNAPL Immobilized in the Subsurface ..... 317
  - 7.6.1 Subsurface Partitioning Loci of LNAPL Fuels ..... 318
- 7.7 Chemical Fingerprinting of LNAPLs ..... 321
  - 7.7.1 First Steps in Chemical Fingerprinting of Fuel Hydrocarbons ..... 321
  - 7.7.2 Identifying Fuel Types ..... 324
  - 7.7.3 Age-Dating Fuel Spills ..... 325
    - 7.7.3.1 Gasoline ..... 325
    - 7.7.3.2 Changes in BTEX Ratios Measured in Groundwater ..... 326
    - 7.7.3.3 Diesel Fuel ..... 328
- 7.8 Simulated Distillation Curves and Carbon Number Distribution Curves ..... 331
- References ..... 334

**Chapter 8 Behavior of Dense Nonaqueous Phase Liquids in the Subsurface ..... 335**

- 8.1 DNAPL Properties ..... 335

8.2	DNAPL-Free Product Mobility.....	336
8.2.1	DNAPL in the Vadose Zone.....	336
8.2.2	DNAPL at the Water Table.....	344
8.2.3	DNAPL in the Saturated Zone.....	345
8.3	Testing for the Presence of DNAPL.....	347
8.3.1	Contaminant Concentrations in Groundwater and Soil That Indicate the Proximity of DNAPL....	348
8.3.2	Calculation Method for Assessing Residual DNAPL in Soil.....	349
8.4	Polychlorinated Biphenyls.....	354
8.4.1	Background.....	354
8.4.2	Environmental Behavior.....	355
8.4.3	Health Effects.....	356
8.4.4	Regulation.....	356
8.4.5	Water Treatment.....	356
8.4.6	Analysis of PCBs.....	356
8.4.7	Case Study: Mistaken Identification of PCB Compounds.....	357
	References.....	358

## **Chapter 9** Biodegradation and Bioremediation of LNAPLs and DNAPLs ..... 359

9.1	Biodegradation and Bioremediation.....	359
9.2	Basic Requirements for Biodegradation.....	361
9.3	Biodegradation Processes.....	362
9.3.1	Case Study: Passive (Intrinsic) Bioremediation of Fuel LNAPLs, California Survey.....	365
9.4	Natural Aerobic Biodegradation of NAPL Hydrocarbons.....	366
9.5	Determining the Extent of Bioremediation of LNAPL.....	368
9.5.1	Using Chemical Indicators of the Rate of Intrinsic Bioremediation.....	369
9.5.2	Hydrocarbon Contaminant Indicator.....	371
9.5.3	Electron Acceptor Indicators.....	372
9.5.4	Dissolved Oxygen Indicator.....	373
9.5.5	Nitrate and Nitrite Denitrification Indicator.....	374
9.5.6	Metal Reduction Indicators: Manganese(IV) to Manganese(II) and Iron(III) to Iron(II).....	374
9.5.7	Sulfate Reduction Indicator.....	375
9.5.8	Methanogenesis (Methane Formation) Indicator.....	375
9.5.9	Redox Potential and Alkalinity as Biodegradation Indicators.....	376
9.5.9.1	Using Redox Potentials to Locate Anaerobic Biodegradation within the Plume.....	376
9.5.9.2	Using Alkalinity to Locate Anaerobic Biodegradation within the Plume.....	377

9.6	Bioremediation of Chlorinated DNAPLs .....	378
9.6.1	Reductive Dechlorination of Chlorinated Ethenes.....	378
9.6.2	Reductive Dechlorination of Chlorinated Ethanes.....	380
9.6.3	Case Study: Using Biodegradation Pathways for Source Identification .....	381
	References .....	381
<b>Chapter 10</b>	<b>Behavior of Radionuclides in the Water and Soil Environment .....</b>	<b>383</b>
10.1	Introduction .....	383
10.2	Radionuclides .....	384
10.2.1	A Few Basic Principles of Chemistry .....	384
10.2.1.1	Matter and Atoms .....	384
10.2.1.2	Elements.....	386
10.2.2	Properties of an Atomic Nucleus .....	387
10.2.2.1	Nuclear Notation.....	387
10.2.3	Isotopes.....	388
10.2.4	Nuclear Forces.....	391
10.2.5	Quarks, Leptons, and Gluons .....	393
10.2.6	Radioactivity .....	394
10.2.6.1	Alpha ( $\alpha$ ) Emission .....	395
10.2.6.2	Beta ( $\beta$ ) Emission.....	395
10.2.6.3	Gamma ( $\gamma$ ) Emission .....	396
10.2.7	Balancing Nuclear Equations.....	396
10.2.8	Rates of Radioactive Decay .....	398
10.2.8.1	Half-Life .....	399
10.2.9	Radioactive Decay Series.....	402
10.2.10	Naturally Occurring Radionuclides .....	403
10.3	Emissions and Their Properties.....	405
10.4	Units of Radioactivity and Absorbed Radiation.....	407
10.4.1	Activity.....	407
10.4.2	Absorbed Dose .....	409
10.4.3	Dose Equivalent .....	410
10.4.4	Unit Conversion Tables .....	411
10.4.4.1	Converting between Units of Dose Equivalent and Units of Activity (Rems to Picocuries).....	411
10.5	Naturally Occurring Radioisotopes in the Environment .....	414
10.5.1	Case Study: Radionuclides in Public Water Supplies .....	418
10.5.2	Uranium.....	420
10.5.2.1	Uranium Geology .....	421
10.5.2.2	Uranium in Water .....	422
10.5.3	Radium .....	423
10.5.3.1	Radium in Soil.....	424
10.5.3.2	Radium in Water.....	424

10.5.4	Radon .....	425
10.5.4.1	Health Issues .....	426
10.5.5	Case Study: Tritium-Based Age Dating of Groundwater .....	427
10.5.5.1	Tritium Age Dating Method .....	428
10.6	Technologies for Removing Uranium, Radium, and Radon from Water .....	431
	References .....	439
<b>Chapter 11</b>	<b>Selected Topics in Environmental Chemistry .....</b>	<b>441</b>
11.1	Treatment of Pollutants in Urban Stormwater Runoff .....	441
11.1.1	Effect of ORP .....	442
11.1.2	Removing Pollutants from Stormwater .....	443
11.1.3	Case Study: Behavior of Trace Metals in Stormwater Vaults .....	444
11.2	Water Quality Profile of Groundwater in Coal-Bed Methane Formations .....	445
11.2.1	Geochemical Explanation for the Stiff Patterns .....	447
11.2.1.1	Bicarbonate Anion Increase .....	448
11.2.1.2	Calcium and Magnesium Cation Decrease .....	448
11.2.1.3	Sodium Cation May Increase .....	449
11.2.1.4	Sulfate Anion Decrease .....	449
11.3	Indicators of Fecal Contamination: Coliform and Streptococci Bacteria .....	449
11.3.1	Total Coliforms .....	450
11.3.2	Fecal Coliforms .....	451
11.3.3	<i>Escherichia coli</i> .....	451
11.3.4	Fecal Streptococci .....	452
11.3.5	Enterococci .....	452
11.3.6	Case Study: Bacterial Source Tracking .....	453
11.4	Reusing Municipal Wastewater: The Problem of Pathogens .....	453
11.4.1	Transport and Inactivation of Viruses in Soils and Groundwater .....	455
11.5	Oil and Grease Analysis .....	456
11.5.1	Silica Gel Treatment .....	457
11.6	Quality Assurance and Quality Control in Environmental Sampling .....	457
11.6.1	Field and Laboratory QA/QC Methods .....	457
11.6.2	Essential Components of Field QA/QC .....	458
11.6.2.1	Sample Collection .....	458
11.6.3	Field Sample Set .....	459
11.6.3.1	Quality Control Samples .....	459

11.6.3.2	Blank Sample Requirements .....	460
11.6.3.3	Field Duplicates and Spikes.....	460
11.6.4	Understanding Laboratory-Reported Results.....	461
11.6.4.1	Precision: How Scatter in Data Is Reported .....	461
11.6.4.2	Terminology of Analytical Measurement Limits.....	462
11.6.5	Environmental Sampling of Low-Solubility Pollutants at Parts-per-Billion and Lower Concentrations.....	465
11.6.5.1	Case Study: Inherent Variability in Parts-per-Billion Analyses of Dioxins and Other Low-Solubility Pollutants .....	466
11.7	Deicing and Sanding of Roads: Controlling Environmental Effects.....	468
11.7.1	Methods for Maintaining Winter Highway Safety ....	468
11.7.2	Antiskid Materials.....	468
11.7.2.1	Environmental Concerns of Antiskid Materials .....	469
11.7.3	Chemical Deicers .....	469
11.7.3.1	Chemical Principles of Deicing.....	470
11.7.3.2	Corrosivity .....	470
11.7.4	Environmental Concerns of Chemical Deicers.....	471
11.7.5	Deicer Components and their Potential Environmental Effects.....	471
11.7.5.1	Chloride Ion .....	471
11.7.5.2	Sodium Ion.....	472
11.7.5.3	Calcium, Magnesium, and Potassium Ions.....	472
11.7.5.4	Acetate .....	472
11.7.5.5	Impurities Present in Deicing Materials...	472
	References .....	472

<b>Appendix A</b>	<b>A Selective Dictionary of Water Quality Parameters and Pollutants .....</b>	<b>475</b>
A.1	Introduction .....	475
A.1.1	Water Quality Chemical Species Classified by Abundance and Important Chemical and Physical Parameters.....	476
A.2	Alphabetical Listing of Chemical and Physical Water Quality Parameters and Pollutants .....	478
A.2.1	2,4-D (2,4-Dichlorophenoxyacetic Acid), CAS No. 94-75-7 .....	478
A.2.1.1	Environmental Behavior.....	478
