1 Introduction and Background	1
1.1 Introduction	1
1.2 What This Book Is Not About	3
1.3 Frameworks for Modeling	5
1.4 Frameworks for Statistical Inference	10
1.5 Frameworks for Computing	17
1.6 Outline of the Modeling Process	20
1.7 R Supplement	22
2 Exploratory Data Analysis and Graphics	29
2.1 Introduction	29
2.2 Getting Data into R	30
2.3 Data Types	34
2.4 Exploratory Data Analysis and Graphics	40
2.5 Conclusion	59
2.6 R Supplement	59
3 Deterministic Functions for Ecological Modeling	72
3.1 Introduction	72
3.2 Finding Out about Functions Numerically	73
3.3 Finding Out about Functions Analytically	76
3.4 Bestiary of Functions	87
3.5 Conclusion	100
3.6 R Supplement	100
4 Probability and Stochastic Distributions for Ecological Modeling	103
4.1 Introduction: Why Does Variability Matter?	103
4.2 Basic Probability Theory	104
4.3 Bayes' Rule	107
4.4 Analyzing Probability Distributions	115
4.5 Bestiary of Distributions	120
4.6 Extending Simple Distributions: Compounding and Generalizing	137
4.7 R Supplement	141

5	Stochastic Simulation and Power Analysis	147
5.1	Introduction	147
5.2	Stochastic Simulation	148
5.3	Power Analysis	156
6	Likelihood and All That	169
6.1	Introduction	169
6.2	Parameter Estimation: Single Distributions	169
6.3	Estimation for More Complex Functions	182
6.4	Likelihood Surfaces, Profiles, and Confidence Intervals	187
6.5	Confidence Intervals for Complex Models: Quadratic Approximation	196
6.6	Comparing Models	201
6.7	Conclusion	220
7	Optimization and All That	222
7.1	Introduction	222
7.2	Fitting Methods	223
7.3	Markov Chain Monte Carlo	233
7.4	Fitting Challenges	241
7.5	Estimating Confidence Limits of Functions of Parameters	250
7.6	R Supplement	258
8	Likelihood Examples	263
8.1	Tadpole Predation	263
8.2	Goby Survival	276
8.3	Seed Removal	283
9	Standard Statistics Revisited	298
9.1	Introduction	298
9.2	General Linear Models	300
9.3	Nonlinearity: Nonlinear Least Squares	306
9.4	Nonnormal Errors: Generalized Linear Models	308
9.5	R Supplement	312
10	Modeling Variance	316
10.1	Introduction	316
10.2	Changing Variance within Blocks	318
10.3	Correlations: Time-Series and Spatial Data	320
10.4	Multilevel Models: Special Cases	324
10.5	General Multilevel Models	327
10.6	Challenges	333
10.7	Conclusion	334
10.8	R Supplement	335

11	Dynamic Models	337
11.1	Introduction	337
11.2	Simulating Dynamic Models	338
11.3	Observation and Process Error	342
11.4	Process and Observation Error	344
11.5	SIMEX	346
11.6	State-Space Models	348
11.7	Conclusions	357
11.8	R Supplement	360
12	Afterword	362
Appendix	Algebra and Calculus Basics	363
A.1	Exponentials and Logarithms	363
A.2	Differential Calculus	364
A.3	Partial Differentiation	364
A.4	Integral Calculus	365
A.5	Factorials and the Gamma Function	365
A.6	Probability	365
A.7	The Delta Method	366
A.8	Linear Algebra Basics	366
	<i>Bibliography</i>	369
	<i>Index of R Arguments, Functions, and Packages</i>	383
	<i>General Index</i>	389
