

Contents

Chapter 1	Ecological Data	1
1.1	Designing Field Studies	3
1.2	Scales of Measurement	6
1.3	Statistical Inference	10
1.4	Data Records	12
	Questions and Problems	14
Part One	Estimating Abundance in Animal and Plant Populations	17
Chapter 2	Estimating Abundance: Mark-Recapture Techniques	19
2.1	Petersen Method	20
2.1.1	Confidence Intervals	21
2.1.2	Sample Size Estimation	29
2.1.3	Assumptions of the Petersen Method	32
2.2	Schnabel Method	35
2.2.1	Confidence Intervals	37
2.2.2	Assumptions of the Schnabel Method	39
2.3	Jolly-Seber Method	42
2.3.1	Confidence Intervals	47
2.3.2	Assumptions of the Jolly-Seber Method	49
2.4	Tests of Equal Catchability	49
2.4.1	Zero-Truncated Poisson Test	51
2.4.2	Chapman's Test	53
2.4.3	Leslie's Test	54
2.4.4	Leslie, Chitty, and Chitty Test	59
2.5	Planning a Mark-Recapture Study	61
2.6	What to Do If Nothing Works	64
2.7	Summary	65
	Questions and Problems	66
Chapter 3	Estimating Abundance: Removal Methods and Resight Methods	70
3.1	Exploited Population Techniques	71
3.1.1	Change-in-Ratio Methods	71
3.1.2	Eberhardt's Removal Method	78
3.1.3	Catch-Effort Methods	79
3.2	Resight Methods	84
3.3	Computer Programs for Population Estimators	89
3.4	Enumeration Methods	93

3.5	Estimating Density	95	
3.5.1	Boundary Strip Methods	96	
3.5.2	Nested Grids Method	98	
3.5.3	Trapping Web Method	100	
3.6	Summary	100	
	Questions and Problems	102	
Chapter 4	Estimating Abundance: Quadrat Counts		105
4.1	Quadrat Size and Shape	105	
4.1.1	Wiegert's Method	109	
4.1.2	Hendricks's Method	112	
4.1.3	When Should You Ignore These Recommendations?		113
4.2	Statistical Distributions	114	
4.2.1	Poisson Distribution	115	
4.2.2	Negative Binomial Distribution	123	
4.3	Line Intercept Method	139	
4.4	Aerial Surveys of Wildlife Populations	141	
4.4.1	Correcting for Bias in Aerial Surveys		143
4.4.2	Sampling in Aerial Surveys	146	
4.5	Summary	154	
	Questions and Problems	154	
Chapter 5	Estimating Abundance: Line Transects and Distance Methods		158
5.1	Line Intersects	158	
5.1.1	Hayne Estimator	162	
5.1.2	Fourier Series Estimator	165	
5.1.3	Shape-Restricted Estimator	167	
5.2	Distance Methods	168	
5.2.1	Byth and Ripley Procedure	170	
5.2.2	T-Square Sampling Procedure	173	
5.2.3	Ordered Distance Method	177	
5.2.4	Variable-Area Transect Method	180	
5.2.5	Point-Quarter Method	182	
5.3	Summary	184	
	Questions and Problems	185	
Part Two	Spatial Pattern in Animal and Plant Populations		189
Chapter 6	Spatial Pattern and Indices of Dispersion		191
6.1	Methods for Spatial Maps	192	
6.1.1	Nearest-Neighbor Methods	192	
6.1.2	Distances to Second- n th Nearest Neighbors		195
6.1.3	More Sophisticated Techniques for Spatial Maps		201
6.2	Contiguous Quadrats	203	
6.2.1	Testing for Spatial Pattern	205	
6.3	Spatial Pattern from Distance Methods	207	
6.3.1	Byth and Riply Procedure	207	
6.3.2	T-Square Sampling Procedure	208	
6.3.3	Eberhardt's Test	211	
6.3.4	Variable-Area Transects	211	

6.4	Indices of Dispersion for Quadrat Counts	212
6.4.1	Variance-to-Mean Ratio	214
6.4.2	k of the Negative Binomial	215
6.4.3	Green's Coefficient	215
6.4.4	Morisita's Index of Dispersion	216
6.4.5	Standardized Morisita Index	216
6.4.6	Distance-to-Regularity Indices	217
6.5	Summary	223
	Questions and Problems	223

Part Three Sampling and Experimental Design 227

Chapter 7 Sample Size Determination and Statistical Power 229

7.1	Sample Size for Continuous Variables	230
7.1.1	Means from a Normal Distribution	230
7.1.2	Comparison of Two Means	235
7.1.3	Variances from a Normal Distribution	241
7.2	Sample Size for Discrete Variables	241
7.2.1	Proportions and Percentages	241
7.2.2	Counts from a Poisson Distribution	244
7.2.3	Counts from a Negative Binomial Distribution	245
7.3	Sample Size for Specialized Ecological Variables	246
7.3.1	Mark-Recapture Estimates	246
7.3.2	Line Transect Estimates	248
7.3.3	Distance Methods	250
7.3.4	Change-in-Ratio Methods	251
7.4	Statistical Power Analysis	251
7.4.1	Estimates of Effect Size for Continuous Variables	252
7.4.2	Effect Size for Categorical Variables	253
7.4.3	Power Analysis Calculations	254
7.5	What to Do If Nothing Works	256
7.6	Summary	259
	Questions and Problems	260

Chapter 8 Sampling Designs: Random, Adaptive, and Systematic Sampling 261

8.1	Simple Random Sampling	262
8.1.1	Estimates of Parameters	264
8.1.2	Estimation of a Ratio	266
8.1.3	Proportions and Percentages	268
8.2	Stratified Random Sampling	273
8.2.1	Estimates of Parameters	275
8.2.2	Allocation of Sample Size	278
8.2.3	Construction of Strata	285
8.2.4	Proportions and Percentages	287
8.3	Adaptive Sampling	288
8.3.1	Adaptive Cluster Sampling	288
8.3.2	Stratified Adaptive Cluster Sampling	291
8.4	Systematic Sampling	291
8.5	Multistage Sampling	294
8.5.1	Sampling Units of Equal Size	295
8.5.2	Sampling Units of Unequal Size	298

8.6	Summary	299	
	Questions and Problems	301	
Chapter 9	Sequential Sampling		303
9.1	Two Alternative Hypotheses	304	
9.1.1	Means from a Normal Distribution	305	
9.1.2	Variances from a Normal Distribution	310	
9.1.3	Proportions from a Binomial Distribution	312	
9.1.4	Counts from a Negative Binomial Distribution	315	
9.2	Three Alternative Hypotheses	320	
9.3	Stopping Rules	321	
9.3.1	Kuno's Stopping Rule	322	
9.3.2	Green's Stopping Rule	323	
9.4	Ecological Measurements	325	
9.4.1	Sequential Schnabel Estimation of Population Size	325	
9.4.2	Sampling Plans for Count Data	328	
9.4.3	General Models for Two Alternative Hypotheses from Quadrat Counts	331	
9.5	Validating Sequential Sampling Plans	333	
9.6	Summary	337	
	Questions and Problems	338	
Chapter 10	Experimental Designs		340
10.1	General Principles of Experimental Design	341	
10.1.1	Randomization	343	
10.1.2	Replication and Pseudoreplication	344	
10.1.3	Balancing and Blocking	347	
10.2	Types of Experimental Designs	349	
10.2.1	Linear Additive Models	349	
10.2.2	Factorial Designs	352	
10.2.3	Randomized Block Designs	357	
10.2.4	Nested Designs	357	
10.2.5	Latin Square Designs	360	
10.2.6	Repeated Measure Designs	362	
10.3	Environmental Impact Studies	362	
10.3.1	Types of Disturbances	364	
10.3.2	Transient Response Studies	364	
10.3.3	Variability of Measurements	366	
10.4	Where Should I Go Next?	369	
10.5	Summary	369	
	Questions and Problems	370	
Part Four	Estimating Community Parameters		373
Chapter 11	Similarity Coefficients and Cluster Analysis		375
11.1	Measurement of Similarity	375	
11.1.1	Binary Coefficients	376	
11.1.2	Distance Coefficients	379	
11.1.3	Correlation Coefficients	383	
11.1.4	Other Similarity Measures	387	

11.2	Data Standardization	392
11.3	Cluster Analysis	393
11.3.1	Single Linkage Clustering	395
11.3.2	Complete Linkage Clustering	397
11.3.3	Average Linkage Clustering	397
11.4	Recommendations for Classifications	401
11.5	Other Multivariate Techniques	403
11.5.1	Direct Gradient Analysis	403
11.5.2	Ordination	404
11.5.3	Classification	405
11.6	Summary	405
	Questions and Problems	406

Chapter 12 Species Diversity Measures 410

12.1	Background Problems	411
12.2	Concepts of Species Diversity	411
12.2.1	Species Richness	412
12.2.2	Heterogeneity	412
12.2.3	Evenness	412
12.3	Species Richness Measures	412
12.3.1	Rarefaction Method	412
12.3.2	Jackknife Estimate	419
12.3.3	Bootstrap Procedure	422
12.3.4	Species-Area Curve Estimates	423
12.4	Heterogeneity Measures	423
12.4.1	Logarithmic Series	425
12.4.2	Lognormal Distribution	429
12.4.3	Simpson's Index	440
12.4.4	Shannon-Wiener Function	444
12.4.5	Brillouin Index	446
12.5	Evenness Measures	446
12.6	Recommendations	451
12.7	Summary	451
	Questions and Problems	452

Chapter 13 Niche Measures and Resource Preferences 455

13.1	What Is a Resource?	456
13.2	Niche Breadth	458
13.2.1	Levins's Measure	458
13.2.2	Shannon-Wiener Measure	463
13.2.3	Smith's Measure	464
13.2.4	Number of Frequently Used Resources	465
13.3	Niche Overlap	466
13.3.1	MacArthur and Levins's Measure	466
13.3.2	Percentage Overlap	470
13.3.3	Morisita's Measure	470
13.3.4	Simplified Morisita Index	471
13.3.5	Horn's Index	471
13.3.6	Hurlbert's Index	471
13.3.7	Which Overlap Index Is Best?	472

13.4	Measurement of Habitat and Dietary Preferences	475
13.4.1	Forage Ratio	478
13.4.2	Murdoch's Index	483
13.4.3	Manly's α	483
13.4.4	Rank Preference Index	486
13.4.5	Rodgers's Index for Cafeteria Experiments	487
13.4.6	Which Preference Index?	490
13.5	Summary	492
	Questions and Problems	493

Part Five Ecological Miscellanea 497

Chapter 14 Estimation of Survival Rates 499

14.1	Finite and Instantaneous Rates	499
14.2	Estimation from Life Tables	503
14.2.1	Methods of Collecting Life Table Data	505
14.2.2	Key Factor Analysis	511
14.2.3	Expectation of Further Life	517
14.3	Estimation of Survival from Age Composition	519
14.4	Radiotelemetry Estimates of Survival	524
14.4.1	Maximum Likelihood Method	525
14.4.2	Kaplan-Meier Method	529
14.5	Estimation of Bird Survival Rates	532
14.6	Testing for Differences in Survival Rates	533
14.6.1	Log-Rank Test	533
14.6.2	Likelihood Ratio Test	534
14.6.3	Temporal Differences in Mortality Rates	537
14.7	Summary	538
	Questions and Problems	539

Chapter 15 The Garbage Can 542

15.1	Transformations	542
15.1.1	Standard Transformations	544
15.1.2	Box-Cox Transformation	551
15.2	Repeatability	554
15.3	Central Trend Lines in Regression	559
15.4	Measuring Temporal Variability of Populations	564
15.5	Jackknife and Bootstrap Techniques	567
15.6	Summary	572
	Questions and Problems	573

Appendices 577
