

PART I Introduction 1

CHAPTER 1 Dynamic Earth Systems 3

PART II Solid Earth Systems and Geologic Time 33

CHAPTER 2 Plate Tectonics: Solid Earth in Motion 33

CHAPTER 3 Geological Time: Cause, Process, and Effect 61

CHAPTER 4 Earth's Water Elements: Abundance and Cycle 69

CHAPTER 5 Volcanoes 139

CHAPTER 6 Geologic Time, Environmental Change, and Earth System Cycles 167

PART III Earth's Surface System 191

CHAPTER 7 The Biosphere 193

CHAPTER 8 Soil and Weathering Systems 227

PART IV Fluid Earth Systems 267

CHAPTER 9 Earth's Surface Water 269

CHAPTER 10 The Groundwater System 321

CHAPTER 11 The Atmospheric System 359

CHAPTER 12 The Ocean and Coastal System 405

PART V Energy, Changing Earth, and Human–Earth Interactions 455

CHAPTER 13 Energy 457

CHAPTER 14 Understanding Climate and Environmental Change 521

CHAPTER 15 Humans and the Whole Earth System: Living in the Anthropocene 561

Appendix	A-1
Glossary	G-1

Index	I-1

Letter from the Authors
Preface

PART I Introduction	1
CHAPTER 1 Dynamic Earth Systems	3
Earth System Science	4
The Concept of Systems	6
Types of Systems	6
System Behavior	7
Feedbacks in Earth Systems	8
Earth's Environmental Systems	
The Geosphere: Earth's Metallic Interior and Rocky Outer Shell	9
The Pedosphere: Where Soils Form	13
The Hydrosphere: Earth's Distinguishing Characteristic	14
The Atmosphere: Earth's Envelope of Gases	16
The Biosphere: Where Life Exists	17
Earth's Energy System	18
States of Energy	18
Sources of Energy	20
Energy Budget of Earth	21
Human Consumption of Energy	22
Human Population and Earth System Boundaries	22
Human Population Growth	23
Resources and Sustainable Development	24
Pollution, Wastes, and Environmental Impact	26
Natural Disasters, Hazards, and Risks	28
The Anthropocene and Planetary Boundaries	28
Closing Thoughts	30
Summary and Key Terms	30
Questions and Exercises	31
Suggested Readings	32

PART II Solid Earth Systems and Geologic Time **33**

CHAPTER 2 Plate Tectonics: Solid Earth in Motion	35
Introduction	36
BOX 2-1 Global and Environmental Change: Plate Tectonics and the Evolution of Species	37
an Earth Continuum and the Scientific Method	38
Science, Pseudoscience, and the Scientific Method	40
Plate Boundaries and Motions	40
Divergent Plate Boundaries, Spreading Ridges, and Normal Faults	41
Convergent Plate Boundaries, Subduction Zones, and Reverse Faults	44
Transform Plate Boundaries and Strike-Slip Faults	47
Piecing the Theory Together	48
Paleomagnetism and Proof of Continental Drift	49
Magnetic Reversals and the Magnetic Polarity Timescale	51
Paleomagnetism and Seafloor Spreading	52
More Evidence in Support of the Theory	52
BOX 2-2 Emerging Research: Drilling into a Subduction Zone: The NanTroSEIZE Project	54
The Driver of Plate Tectonics	55
BOX 2-3 Emerging Research: Our Evolving Understanding of the Hawaiian Hot Spot	56
Closing Thoughts	58
Summary and Key Terms	58
Questions and Exercises	58
Suggested Readings	59

CHAPTER 3 Earthquakes: Their Causes, Hazards, and Risks	61	Igneous Rocks	
Introduction	62	Sediments and Sedimentary Rocks	103
The Buildup and Release of Seismic Energy	64	Metamorphic Rocks	107
Fault Behavior	65	The Rock Cycle	111
Seismic Sources and Waves	67		113
Locating Earthquake Epicenters	68	Rock and Mineral Resources	114
BOX 3–1 Geologist's Toolbox: Imaging Earth's Interior	69	Industrialization and Mineral Resources	115
Tectonic Loading and the Earthquake Cycle	72	Critical Minerals	116
Assessing Earthquake Hazards	75	Ore Deposits and Ore Minerals	116
Earthquake Moment Magnitude	75	Types of Ore Deposits	117
Earthquake Intensity	76	BOX 4–2 Case Study: Rare Earth Elements: Not Rare, But Hard to Get	118
Looking for Earthquakes in the Geologic Record	78	Depletion and Recycling of Mineral Resources	124
BOX 3–2 Case Study: Magnitude Versus Intensity: The 2010 Haiti and Chile Events	79	Environmental Impacts of Mining	125
The Potential for Future Earthquakes	82	Environmental Regulation of Mining	126
BOX 3–3 Emerging Research: The Parkfield Earthquake and the Difficulties of Prediction	84	Metal Cycling Through Earth Systems: Copper Case Study	127
Minimizing the Risks from Earthquakes	86	BOX 4–3 Case Study: Butte, Montana— From Boom Town to Superfund Site	128
BOX 3–4 Earth Science and Public Policy: Earthquakes and Legislation	87	Closing Thoughts	133
Closing Thoughts	89	Summary and Key Terms	133
Summary and Key Terms	89	Questions and Exercises	134
Questions and Exercises	90	Suggested Readings	137
Suggested Readings	91		
CHAPTER 4 Earth Materials: Elements, Minerals, and Rocks	93	CHAPTER 5 Volcanoes	139
Introduction	94	Introduction	140
Minerals: Building Blocks of the Lithosphere	96	Volcanic Eruptions	142
Crystallization and Mineral Structure	97	How Volcanoes Erupt	142
Major Mineral Groups	98	Magma Types and Eruptive Styles	143
BOX 4–1 Geologist's Toolbox: Soft Crystals and Hard Science in the Cave of Crystals, Mexico	100	Shield Volcanoes, Stratovolcanoes, and Cinder Cones	145
Mineral Properties: Hardness and Cleavage	102	Craters, Calderas, and Climate	148
Rocks and the Rock Cycle	103	Volcanic Hazards	149
		Volcanic Ash	149
		BOX 5–1 Earth Science and Public Policy: Creating Artificial Volcanic Eruptions to Counter Global Warming: Geoengineering or Geo-Fantasy?	151
		Volcanic Gases	152
		Tsunamis from Volcanic Eruptions	153
		Active, Dormant, and Extinct Volcanoes	153
		The Volcanic Explosivity Index	153
		Determining Volcanic Threat Levels	154
		BOX 5–2 Earth Science and Public Policy: The Prediction Challenge	157

Minimizing the Risks from Volcanic Eruptions	159	Closing Thoughts	187
The Lahars of Mount Rainier	159	Summary and Key Terms	187
BOX 5-3 Earth Science and Public Policy: Volcanic Eruptions and the U.S. Air Pollution Centers	161	Questions and Exercises	188
Stopping the Lava on Mount Etna	162	Suggested Readings	189
Closing Thoughts	163		
Summary and Key Terms	163		
Questions and Exercises	164		
Suggested Readings	165		
CHAPTER 6 Geologic Time, Environmental Change, and Earth System Cycles	167		
Introduction	168		
Scales of Time and Earth System Cycles	169		
Measuring Time: Relative and Absolute Age Dating	169		
BOX 6-1 Correlation: Environmental Change, One Example of Data Coding Revealed	170		
Fossils, Evolution, and Relative Geologic Time	172		
Radioactivity and Absolute Geologic Time	175		
Radiometric Dating	178		
BOX 6-2 Geologist's Toolbox: How Is the Rate of Radioactive Decay Used to Date Earth Materials?	180		
BOX 6-3 Geologist's Toolbox: Family History: Radiometric Dating and the Tempo of Human Evolution	182		
Global Change over Different Scales of Time	184		
Global Change over Historic Time Scales	184		
Global Change over Short Geologic Time Scales	185		
BOX 6-4 Geologist's Toolbox: How Do Scientists Date Ice Cores?	186		
Global Change over Long Geologic Time Scales	186		
		PART III Earth's Surface System	191
		CHAPTER 7 The Biosphere	193
		Introduction	194
		Biosphere Structure and Functioning	194
		Energy for Life: Photosynthesis and Respiration	195
		Nutrients and Biogeochemical Cycles	195
		Trophic Levels and Food Chains	199
		Competition and Cooperation	200
		Population Growth and Carrying Capacity	200
		BOX 7-1 Case Study: The Guano Era in Peruvian History	201
		Biomes, Habitats, and Ecological Niches	203
		Biodiversity	205
		BOX 7-2 Emerging Research: Anthropogenic Biomes: Humanity's Imprint on the Biosphere	206
		BOX 7-3 Case Study: Consequences of Wolf Reintroduction into Yellowstone National Park	208
		Ecosystem Services	210
		Environmental Goods	210
		Pollination of Crops and Native Vegetation	211
		Water Purification	211
		Human Impacts on the Biosphere	212
		Human Population Growth	213
		Human Impacts on Biogeochemical Cycles	216
		Habitat Fragmentation	216
		Exotic Species	216
		Extinctions and Loss of Biodiversity	218
		BOX 7-4 Earth Science and Public Policy: Detergent Phosphates: From Good Housekeeping Necessity to Environmental Nuisance	219
		Restoration Ecology	221
		Closing Thoughts	222
		Summary and Key Terms	222
		Questions and Exercises	223
		Suggested Readings	225

CHAPTER 8 Soil and Weathering Systems

Introduction	227
The Pedosphere: A Geomembrane to Other Earth Systems	228
Physical Weathering	230
Chemical Weathering	231
BOX 8-1 Global and Environmental Change: Tectonic Uplift, Rock Weathering, and Long-Term Climate Change	233
BOX 8-2 Geologist's Toolbox: The Unusual Properties of Clay Minerals	236
Biological Processes and Their Role in Weathering	240
Soil Profiles and Soil-Forming Factors	242
The Interaction of Earth Systems to Form Soil	243
Cycling of Nitrogen Among the Atmosphere, Biosphere, and Pedosphere	245
Pedospheres, Humates, Soils, Clays, and Mineral Ores	245
The Fertile Soil	245
BOX 8-3 Earth Science and Public Policy: Population-Supporting Capacities and Soil Clay, Laterite, and Mineral Ores	248
Soil Erosion Hazards, Land Degradation, and Soil Conservation	249
Soil Erosion: A Quiet Crisis	250
BOX 8-4 Case Study: Droughts, Land Degradation, and the American "Dust Bowl"	252
Soil Erosion by Water	253
Land Degradation and Desertification	254
Assessing Soil Erosion	255
Soil Conservation Practices	256
Mass Movement Hazards and Their Mitigation	257
The Roles of Gravity and Water in Mass Movement	258
Types of Mass Movement	259
Causes and Prevention of Mass Movement	261
Closing Thoughts	263
Summary and Key Terms	263
Questions and Exercises	264
Suggested Readings	266

PART IV Fluid Earth Systems

267

CHAPTER 9 Earth's Surface Water

Introduction	269
The Hydrologic Cycle	270
Surface Water Distribution	271
Hydrologic Budgets	272
BOX 9-1 Earth Science and Public Policy: Surface Water Use in the Colorado River Basin and Long-Term Records of Runoff from Tree Rings	273
Drainage Basins and Streams	275
Drainage Networks and Base-Level Controls	277
What Happens When It Rains?	277
Stream Stage, Discharge, and Hydrographs	278
Stream Channel Patterns and Processes	280
Floods	281
Flood Hazards	284
Flood Frequency Analysis	284
The U.S. National Flood Insurance Program	286
BOX 9-2 Case Study: The Geologic Record of Flooding in South Dakota's Black Hills	287
Altered Streams	288
Dams	290
Dam Removal	290
Artificial Levees and Floodwalls	293
Channelization	294
Wetlands	294
Characteristics and Benefits of Wetlands	295
Protecting Wetlands	296
Managing and Restoring Streams and Wetlands	297
River Corridor and Wetland Restoration	297
BOX 9-3 Emerging Research: Stream and Wetland Restoration: What Is Natural?	298
Unchannelizing the Kissimmee River	301
Water Resources and Protection	302
Freshwater Use and Virtual Water	302
Surface Water Systems and Waste Disposal	304

The Clean Water Act and Watershed Management	304	Migration of Groundwater Pollutants	349
Regulations to Protect Drinking Water	307	BOX 10–5 Case Study: Contaminant Plume at Cape Cod, Massachusetts	350
The National Wild and Scenic Rivers Act	308	U.S. Laws Governing the Quality of Water Resources	352
Droughts	309	Groundwater and Aquifer Restoration	353
Types of Droughts	309	Closing Thoughts	355
Impacts of Droughts on Socioeconomic and Environmental Systems	310	Summary and Key Terms	355
Drought History and Global Warming	311	Questions and Exercises	356
BOX 9–4 Case Study: Water Battles in Wet Places: Drought and the Tri-State Water Dispute	312	Suggested Readings	357
Closing Thoughts	315	CHAPTER 11 The Atmospheric System	359
Summary and Key Terms	315	Introduction	360
Questions and Exercises	316	The Atmosphere: An Envelope of Gases	362
Suggested Readings	318	Present Atmospheric Composition	362
CHAPTER 10 The Groundwater System	321	BOX 11–1 Global and Environmental Change: The Interwined Histories of Atmospheric Oxygen and Life	364
Introduction	321	Atmospheric Structure	366
Water in the Ground	322	Atmospheric Circulation and Climate	369
The Water Table	323	The Greenhouse Effect	369
Porosity and Groundwater Storage	324	Differential Heating of Earth	370
Permeability and Groundwater Flow	326	BOX 11–2 Geologist's Toolbox: Electromagnetic Radiation	372
Aquifers	326	Tropospheric Circulation	374
BOX 10–1 Geologist's Toolbox: Darcy's Law and the Flow of Water and Contaminants in Rocks and Sediments	330	Climate Zones	378
Natural Groundwater Chemistry	332	Storms	381
BOX 10–2 Earth Science and Public Policy: Saving Water in the Desert	335	Development of Air Masses and Frontal Weather Systems	381
Groundwater as a Resource	335	Severe Weather	383
Global Distribution and Use	336	Tropical Storms and Hurricanes	386
Groundwater Resource Management	336	BOX 11–3 Geologist's Toolbox: Clouds: Thor's Anvil and Castles in the Air	387
BOX 10–3 Case Study: Water Resource Management in Los Angeles	340	Human Influence on Atmospheric Chemistry	390
Groundwater Hazards	342	Acid Rain	391
Solution Caverns and Sinkholes	342	BOX 11–4 Case Study: The Destructive Power of Tornadoes	392
Land Subsidence from Groundwater Mining	342	Smog	394
BOX 10–4 Case Study: Dead Sea Sinkholes	344	Ozone Depletion	396
Intrusion of Salt Water	346	Air Pollution and Environmental Management	398
Groundwater Pollution and Its Cleanup	347		
Types and Sources of Groundwater Pollution	347		

Legislation	398	Closing Thoughts	
Cleanup Technologies	399	Summary and Key Terms	449
Closing Thoughts	400	Questions and Exercises	451
Summary and Key Terms	401	Suggested Readings	452
Questions and Exercises	402		454
Suggested Readings	403		
CHAPTER 12 The Ocean	405	PART V Energy, Changing Earth, and Human–Earth Interactions	455
Introduction	406	CHAPTER 13 Energy	457
Features of the Seafloor	409	Energy and Humans	458
The Changing Ocean Basins	409	Earth's Energy System	460
Coastlines	410	States of Energy	460
Sea Level Changes	411	Energy, Work, and Power	460
The Ocean's Energy Budget	412	Sources of Energy	462
The Salinity of Seawater	413	Earth's Energy Cycle and Budget	463
Nutrients in Seawater	414	Energy Transfers and Photosynthesis	463
Dissolved Gases and pH in Seawater	414	Resources, Energy Currency, and End-Use Services	464
Ocean Structure and Circulation	415	Petroleum: Crude Oil and Natural Gas	465
Vertical Structure of the Oceans	416	Origin of Petroleum	465
Circulation in the Surface Mixed Layer	417	Finding, Extracting, and Refining Petroleum	468
BOX 12–1 Global and Environmental Change: El Niño Climatic Events	420	Peak Oil and Gas: How Long Will Crude Oil and Natural Gas Last?	470
Circulation in the Deep Ocean	420	BOX 13–1 Earth Science and Public Policy: The Essential Trade-off between Fossil Fuels and the Environment	472
Coastal Processes and the Hazards of Living by the Sea	424	Unconventional Fluid Hydrocarbons: Oil Sands, Shale Oil, and Gas	474
Beaches and Waves	424	Environmental Impacts Associated with Petroleum Use	478
Tides	426	BOX 13–2 Earth Science and Public Policy: Deepwater Drilling and Well Blowouts	482
Coastal Erosion and Attempts to Control It	428	Coal	484
Controlling Cliff Erosion	430	Origin of Coal	485
Tsunamis	431	Global Distribution of Coal Deposits	486
Human Impacts on the Seas	436	Coal Production and Reserves	487
Waste Disposal and Polluted Runoff Along Continental Shelves	436	Coal Mining	487
BOX 12–2 Earth Science and Public Policy: Who Owns the Seas?	438	Environmental Impacts of Mining and Burning Coal	488
Plastics in the Sea	443	BOX 13–3 Geologist's Toolbox: Visualizing Mountaintop Removal in 3–D with Remote Sensing and Lidar	490
BOX 12–3 Case Study: Chesapeake Bay and Population Growth	444	Carbon Capture and Storage	493
Ocean Acidification	447		
Protecting the Oceans	447		

Geothermal Energy	495	Global Climate Models	554
Nuclear Energy	497	Closing Thoughts	556
The Nuclear Fuel Cycle	497	Summary and Key Terms	557
Fission and Fusion	501	Questions and Exercises	558
Nuclear Power Plant Safety	502	Suggested Readings	559
Nuclear Waste	502		
Renewable Energy	504	CHAPTER 15 Humans and the	
Solar Energy	504	Whole Earth System: Living in the	
Wind Energy	507	Anthropocene	561
Hydropower	510	Introduction	562
Biomass	510	Planetary Boundaries	564
Energy Efficiency and Conservation	511	Atmospheric Aerosol Loading	565
BOX 13–4 Case Study: The “New		Biodiversity Loss	565
Energy Era : Green Buildings and The Road		BOX 15–1 Global and Environmental	
Taken	512	Change: Tipping Points	566
Closing Thoughts	516	Changes in Biogeochemical Cycles	566
Summary and Key Terms	517	Changes in Land Use	567
Questions and Exercises	518	Chemical Pollution	568
Suggested Readings	519	Global Freshwater Use	568
		Stratospheric Ozone Depletion	569
CHAPTER 14 Understanding		Anthropogenic Climate Change	570
Climatic and Environmental Change	521	Evidence for a Warming Earth	571
Introduction	522	Causes of Climatic Change	571
Climate on Terrestrial Planets	523	BOX 15–2 Earth Science and Public Policy:	
Earth’s Temperature and the Faint		Manufacturing a Controversy	573
Young Sun Problem	524	The Case for Human Sources	574
Mars: A Frozen Planet	526	BOX 15–3 Emerging Research: Atmospheric	
Venus: A Runaway Greenhouse Effect	526	CO ₂ and Temperature: Resolving a Chicken	
Causes of Climatic Change	527	and Egg Problem	578
Climate and the Evolution of Life	528	Impacts of Rising Greenhouse Gas	
Influence of Plate Tectonics on Climate	530	Concentrations	580
Influence of the Oceans on Climate	532	Greenhouse Gas Scenarios	581
BOX 14–1 Case Study: Snowball Earth	534	Temperature	581
Influence of Earth’s Orbital Parameters		Sea Level Rise	583
on Climate	536	Changes to the Hydrologic Cycle	587
Influence of Humans on Climate	538	Impacts on Human Health	587
Climatic Feedbacks	539	Ecosystem Impacts of a Warming Planet	588
Indicators of Environmental Change	541	Lessons from Former Worlds	589
Geologic Records of Climate and		BOX 15–4 Emerging Research:	
Environment	541	Frozen Methane: A Climatic Bomb Waiting	
BOX 14–2 Emerging Research: Earth’s		to Go Off?	590
Flickering Temperature and Climatic Seesaw	546	Climate Change Benefits	592
Biological Records of Climate and		Coming to Grips with the Anthropocene	592
Environment	551		

Greenhouse Gas Reduction Strategies	592	Appendix 1: Classification of Biological	
Geoengineering	594	Organisms	
Adaptations to a Warmer World	595	Appendix 2: Periodic Table of Elements	A-1
International Agreements	598	Appendix 3: Units and Conversions	A-2
		Appendix 4: Properties of Common	A-3
Closing Thoughts	600	Minerals	A-8
Summary and Key Terms	601	Glossary	G-1
Questions and Exercises	602	References	R-1
Suggested Readings	603	Index	I-1

Greenhouse Gas Reduction Strategies	592	Appendix 1: Classification of Biological	
Geoengineering	594	Organisms	A-1
Adaptations to a Warmer World	595	Appendix 2: Periodic Table of Elements	A-2
