PREFACE; NOTE TO THE STUDENT

1. WHAT IS STATISTICS?

1.1	Introduction	1
1.2	Characterizing a Set of Measurements: Graphical Methods	3
1.3	Characterizing a Set of Measurements: Numerical Methods	6
1.4	How Inferences Are Made	9
1.5	Theory and Reality	11
1.6	Summary	11

2. PROBABILITY

2.1	Probability	17
2.2	Probability and Inference	18
2.3	A Review of Set Notation	20
2.4	A Probabilistic Model for an Experiment: The Discrete Case	21
2.5	A Probabilistic Model for an Experiment: The Continuous Case	26
2.6	Calculating the Probability of an Event: The Sample-Point Approach	28
2.7	Tools for Use with the Sample-Point Approach	32
2.8	Conditional Probability and the Independence of Events	39
2.9	Two Laws of Probability	43
2.10	Calculating the Probability of an Event: The Event-Composition Method	46
2.11	Bayes' Rule	54
2.12	Numerical Events and Random Variables	56
2.13	Random Sampling	58
2.14	Summary	59

3. DISCRETE RANDOM VARIABLES AND THEIR PROBABILITY DISTRIBUTIONS

3.1	Basic Definition	67
3.2	The Probability Distribution for a Discrete Random Variable	68

3.3	The Binomial Probability Distribution	71
3.4	The Geometric Probability Distribution	76
3.5	The Hypergeometric Probability Distribution	78
3.6	The Poisson Probability Distribution	81
3.7	The Expected Value of a Random Variable or a Function of a Random Variable	85
3.8	Some Techniques Useful in Finding Expected Values for Discrete Random Variables	93
3.9	Moments and Moment-Generating Functions	96
3.10	Probability-Generating Functions	100
3.11	Tchebysheff's Theorem	104
3.12	Summary	105

4. CONTINUOUS RANDOM VARIABLES AND THEIR PROBABILITY DISTRIBUTIONS

4.1	Introduction	115
4.2	The Probability Distribution for a Continuous Random Variable	115
4.3	The Uniform Distribution	123
4.4	The Normal Distribution	124
4.5	The Gamma-Type Probability Distribution	128
4.6	The Beta Function	130
4.7	Some General Comments	132
4.8	The Expected Value for a Continuous Random Variable	133
4.9	Other Expected Values	136
4.10	Tchebysheff's Theorem	141
4.11	Expectations of Discontinuous Functions and Mixed Probability Distributions	144
4.12	Summary	147

5. MULTIVARIATE PROBABILITY DISTRIBUTIONS

5.1	Introduction	157
5.2	Bivariate and Multivariate Probability Distributions	158
5.3	Marginal and Conditional Probability Distributions	164
5.4	Independent Random Variables	170
5.5	The Expected Value of a Function of Random Variables	175
5.6	Special Theorems	178
5.7	The Covariance of Two Random Variables	180
5.8	The Expected Value and Variance of Linear Functions of Random Variables	185
5.9	The Multinomial Probability Distribution	191
5.10	The Multivariate Normal Distribution	194
5.11	Conditional Expectations	195
5.12	Summary	198

6. FUNCTIONS OF RANDOM VARIABLES

- 6.1 Introduction 207
- 6.2 Random Sampling 208
- 6.3 Finding the Probability Distribution of a Function of Random Variables 210
- 6.4 Method of Distribution Functions 211
- 6.5 Method of Moment-Generating Functions 216
- 6.6 Method of Transformations 220
- 6.7 Method of Conditioning 227
- 6.8 Order Statistics 229
- 6.9 Distributions of Some Common Functions of Random Variables 233
- 6.10 Summary 236

7. SOME APPROXIMATIONS TO PROBABILITY DISTRIBUTIONS:
LIMIT THEOREMS

- 7.1 Introduction 243
- 7.2 Convergence in Probability 244
- 7.3 Convergence in Distribution 248
- 7.4 The Central Limit Theorem 252
- 7.5 A Combination of Convergence in Probability and Convergence in Distribution 256
- 7.6 Summary 257

8. ESTIMATION

- 8.1 Introduction 263
- 8.2 Some Properties of Estimators 265
- 8.3 Some Common Unbiased Point Estimators 267
- 8.4 Evaluating the Goodness of a Point Estimate 270
- 8.5 Confidence Intervals 274
- 8.6 A Large-Sample Confidence Interval 275
- 8.7 Selecting the Sample Size 279
- 8.8 Small-Sample Confidence Intervals for μ and $\mu_1 - \mu_2$ 283
- 8.9 A Confidence Interval for σ^2 288
- 8.10 Summary 290

9. METHODS OF ESTIMATION AND PROPERTIES OF POINT
ESTIMATORS

- 9.1 Introduction 299
- 9.2 The Method of Moments 299
- 9.3 The Method of Maximum Likelihood 302
- 9.4 Properties of Estimators 306
- 9.5 Efficiency 306

9.6	Consistency	309
9.7	Sufficient Statistics	310
9.8	Other Methods for Finding Estimators	313
9.9	Summary	317

10. HYPOTHESIS TESTING

10.1	Introduction	325
10.2	Elements of a Statistical Test	326
10.3	Common Large-Sample Tests	332
10.4	Calculating Type II Error Probabilities and Finding the Sample Size for the Z Test	338
10.5	Two Tests Based on Student's t Statistic	343
10.6	Testing Hypotheses Concerning Variances	348
10.7	Power of Tests: The Neyman-Pearson Lemma	351
10.8	Likelihood Ratio Tests	356
10.9	Minimax and Bayes Tests	361
10.10	Summary	364

11. LINEAR MODELS AND ESTIMATION BY LEAST SQUARES

11.1	Introduction	375
11.2	Linear Statistical Models	377
11.3	The Method of Least Squares	379
11.4	Fitting the Linear Model Using Matrices	383
11.5	Properties of Least-Squares Estimators for the Model $Y = \beta_0 + \beta_1 x + \varepsilon$	389
11.6	Properties of the Least-Squares Estimators for the General Linear Model	398
11.7	Inferences Concerning the Parameters β_i	399
11.8	Inferences Concerning Linear Functions of the Model Parameters	402
11.9	Predicting a Particular Value of Y	406
11.10	A Test Statistic to Test $H_0: \beta_{k+1} = \beta_{k+2} = \dots = \beta_k = 0$	410
11.11	An Example Involving Coding	416
11.12	Correlation	419
11.13	Summary	423

12. CONSIDERATIONS IN DESIGNING EXPERIMENTS

12.1	The Elements Affecting the Information in a Sample	431
12.2	The Physical Process of Designing an Experiment	432
12.3	Random Sampling and the Completely Randomized Design	436
12.4	Volume-Increasing Experimental Designs	438
12.5	Noise-Reducing Experimental Designs	444
12.6	Summary	452

13. THE ANALYSIS OF VARIANCE

- 13.1 Introduction 457
- 13.2 The Analysis of Variance 458
- 13.3 A Comparison of More Than Two Means 463
- 13.4 Proof of Additivity of the Sums of Squares and $E(MST)$ for a Completely Randomized Design 467
- 13.5 An Analysis-of-Variance Table for a Completely Randomized Design 470
- 13.6 Estimation for the Completely Randomized Design 471
- 13.7 The Analysis of Variance for a Randomized Block Design 472
- 13.8 Estimation for the Randomized Block Design 477
- 13.9 The Analysis of Variance for a Latin-Square Design 478
- 13.10 Estimation for the Latin-Square Design 484
- 13.11 Selecting the Sample Size 485
- 13.12 Summary and Comments 487

14. ANALYSIS OF ENUMERATIVE DATA

- 14.1 A Description of the Experiment 501
- 14.2 The Chi-Square Test 502
- 14.3 A Test of a Hypothesis Concerning Specified Cell Probabilities: A Goodness-of-Fit Test 505
- 14.4 Contingency Tables 509
- 14.5 $r \times c$ Tables with Fixed Row or Column Totals 515
- 14.6 Other Applications 517
- 14.7 Summary 518

15. NONPARAMETRIC STATISTICS

- 15.1 Introduction 527
- 15.2 The Sign Test for Comparing Two Populations 529
- 15.3 The Rank-Sum Test for Comparing Two Population Distributions 532
- 15.4 The Mann-Whitney U Test 535
- 15.5 The Wilcoxon Rank-Sum Test for a Paired Experiment 539
- 15.6 The Runs Test: A Test for Randomness 542
- 15.7 Rank Correlation Coefficient 548
- 15.8 Some General Comments on Nonparametric Statistical Tests 552

APPENDIX I. Matrices A1

APPENDIX II. Common Probability Distributions, Means, Variances, and Moment-Generating Functions A23

APPENDIX III. Tables A25

Table 1	Binomial Probability Tables	A25
Table 2	Table of e^{-x}	A29
Table 3	Normal Curve Areas	A30
Table 4	Critical Values of t	A31
Table 5	Critical Values of Chi Square	A32
Table 6	Percentage Points of the F Distribution, $\alpha = .05$	A34
Table 7	Percentage Points of the F Distribution, $\alpha = .01$	A36
Table 8	Distribution Function of U	A38
Table 9	Critical Values of T in the Wilcoxon Matched-Pairs Signed-Ranks Test	A43
Table 10	Distribution of the Total Number of Runs R in Samples of Size (n_1, n_2) ; $P(R \leq a)$	A44
Table 11	Critical Values of Spearman's Rank Correlation Coefficient	A46
Table 12	Squares, Cubes, and Roots	A47
Table 13	Random Numbers	A60

ANSWERS TO EXERCISES A63
