<i>Preface</i>	<i>xi</i>
<i>Acknowledgments</i>	<i>xiii</i>
<i>Glossary</i>	<i>xv</i>
<i>Nomenclature</i>	<i>xxiii</i>

1

INTRODUCTION	1
1.1. Why Calculate Flammable Mass?	1
1.2. How Are Flammable Mass Estimates Used?	1
1.3. Other CCPS Publications	2

2

OVERVIEW	5
2.1. Context	5
2.2. Objectives	7
1.3. How to Use This Book	8

3

INDUSTRY EXPERIENCES WITH FLAMMABLE VAPOR CLOUDS	11
3.1. Property Losses from Vapor Cloud Accidents	11
3.2. Examples of Vapor Cloud Events	11
3.2.1. Bangkok, Thailand, LPG Vapor Cloud	12
3.2.2. Saint Herblain, France, Gasoline Cloud, October 7, 1991	14
3.2.3. Pampa, Texas, Hoechst-Celanese Explosion, November 17, 1987	16

3.2.4. Monsanto Ethanol Explosion, Autumn, 1970	17
3.2.5. Mexico City Vapor Cloud and Explosion, November 19, 1984	18
3.2.6. Pasadena, Texas Fire and Explosion, October 23, 1989	18
3.3. Examples with Postaccident Determination of Flammable Mass	20
3.3.1. Flixborough Vapor Cloud Explosion, June 1, 1974	20
3.3.2. Piper Alpha North Sea Platform Fire, July 6, 1988	24
3.3.3. DSM Naphtha Cracker, Beek, the Netherlands, 7 November 1975	26

4

BASIC CONCEPTS—FLUID FLOW, FIRES, AND EXPLOSIONS	31
4.1. Discharge Characteristics	31
4.1.1. Single-Phase Discharge Rates from Tanks	32
4.1.2. Single-Phase Discharge Rates from Pipes	36
4.1.3. Two-Phase Discharge Rates from Tanks	37
4.1.4. Two-Phase Discharge Rates from Pipes	44
4.1.5. Aerosol Formation and Drop Size Correlations	49
4.1.6. Rainout	51
4.1.7. Pool Spread and Evaporation on Land	56
4.2. Dispersion Factors	60
4.2.1. Jet Mixing	60
4.2.2. Meteorology	62
4.2.3. Surface Roughness and Terrain	66
4.2.4. Averaging Time	69
4.2.5. Impingement and Cratering	70
4.2.6. Obstacle Effects	71
4.3. Sources of Ignition	75
4.4. Flame Characteristics	77
4.4.1. Flammable Limits	81
4.4.2. Flammable Limits with Inerts	84
4.4.3. Autoignition Temperature for Gases	88
4.4.4. Minimum Ignition Energy for Gases	91
4.4.5. Flash Point	91
4.4.6. Laminar Burning Velocity and Turbulent Flame Speed	93
4.5. Aerosol Flammability	94
4.6. Turbulence Effects	99
4.6.1. Turbulence Effects of Jet Plume Ignition	99
4.6.2. Turbulence and Pockets of Flammable Material	102
4.7. Flash Fires	104

4.8. Explosions	104
4.8.1. Confinement and Congestion	105
4.8.2. Effect of Concentration on Explosion Overpressure	108
4.8.3. TNT Equivalence Explosion Models	109
4.8.4. Volume Source Explosion Models	114
4.8.5. Determining Fuel Reactivity	120
4.8.6. Determining Degree of Confinement	121
4.8.7. Determining Level of Congestion	122
4.8.8. Multiple Congested Volumes	124
4.9. Minimum Flammable Mass for Vapor Cloud Explosions	124
4.10. Probability of Vapor Cloud Ignition and Explosion	127
5	
DETERMINATION OF FLAMMABLE MASS	131
5.1. Estimation Methods by Degree of Confinement	132
5.2. Methods for Finding the Flammable Mass in Unconfined Vapor Clouds	132
5.2.1. Screening: Rules of Thumb	135
5.2.2. Calculating Flammable Mass with Dispersion Models	136
5.3. Methods for Finding the Flammable Mass in Partially Confined Vapor Clouds	157
5.3.1. Estimating Flammable Mass for Potential Explosion Sites	158
5.4. Methods for Finding the Flammable Mass in Confined Vapor Clouds	159
5.4.1. Flammable Mass in Well-Mixed Room from Spill Outdoors	162
5.4.2. Flammable Mass from Indoor Release in Well-Mixed Room with Low Ventilation	165
6	
OVERVIEW OF RELATED COMPUTER PROGRAMS	169
7	
WORKED EXAMPLES	183
7.1. Example 10, Unconfined Vapor Cloud—Vapor and Liquid Propane Releases	184
7.2. Example 11, Unconfined Vapor Cloud—Effect of Wind Speed	186

7.3. Example 12, Partially Confined Vapor Cloud Explosion— Vinyl Chloride Monomer Release	186
7.4. Example 13, Partially Confined Vapor Cloud Explosion— Total Petroleum LaMede Refinery Explosion, November 1992	192
7.5. Example 14, Partially Confined Vapor Cloud—Multiple Congested Areas	199
7.6. Example 15, Confined Vapor Clouds	201

8

RECOMMENDATIONS FOR FUTURE WORK 205

8.1. Calculating Flammable Mass Profiles Along a Vapor Cloud	205
8.2. Resolving the Minimum Explosive Mass Issue	205
8.3. Contribution of Aerosols to Explosive Mass	206
8.4. Dispersion Modeling Around Plant Structure	206
8.5. Improved Modeling of Jets Impacting Surfaces	207
8.6. Models That Account for Turbulence Spectra	207
8.7. Reconciling Indoor and Outdoor Explosion Models	207
8.8. Calculate Net Efficiencies for TNT Equivalent Models from Historical Events	207

APPENDIX A

ATMOSPHERIC STABILITY CLASSIFICATION SCHEMES	209
--	-----

APPENDIX B

VERTICAL WIND PROFILES	213
------------------------	-----

APPENDIX C

FLAMMABILITY PROPERTIES	215
-------------------------	-----

APPENDIX D

CORRELATION FOR FLASH POINT	229
-----------------------------	-----

APPENDIX E

POLYDISPERSE DROP SIZE DISTRIBUTIONS	231
--------------------------------------	-----

APPENDIX F

MULTICOMPONENT POOL EVAPORATION FOR SPILLS ON LAND	233
---	-----

APPENDIX G

GENERALIZED INDOOR CONCENTRATION BUILD-UP OR DECAY	235
---	-----

APPENDIX H

CALCULATING CONCENTRATIONS FOR INDOOR RELEASES	237
--	-----

APPENDIX I

EVALUATING FLAMMABLE MASS FOR GAUSSIAN DISPERSION MODELS: INSTANTANEOUS, POINT SOURCE	241
--	-----

APPENDIX J

EVALUATING FLAMMABLE MASS FOR GAUSSIAN DISPERSION MODELS: CONTINUOUS RELEASE, APPROXIMATE METHOD	245
---	-----

APPENDIX K

EVALUATING FLAMMABLE MASS FOR GAUSSIAN DISPERSION MODEL—CONTINUOUS RELEASE, RIGOROUS SOLUTION	249
--	-----

APPENDIX L

NUMERICAL INTEGRATION TO FIND FLAMMABLE MASS	257
--	-----

APPENDIX M

EXPANSION VELOCITY AND DISCHARGE COEFFICIENTS	261
---	-----

APPENDIX N

CONVERSION FACTORS	265
--------------------	-----

<i>References</i>	267
