

Contents

<i>Page vii</i>	Preface
1	1 Introduction
	1.1 <i>Fields</i>
	1.2 <i>Geophysical equipment</i>
	1.3 <i>Geophysical data</i>
	1.4 <i>Bases and base networks</i>
19	2 Gravity method
	2.1 <i>Physical basis of the gravity method</i>
	2.2 <i>Gravity meters</i>
	2.3 <i>Gravity reductions</i>
	2.4 <i>Gravity surveys</i>
	2.5 <i>Field interpretation</i>
40	3 Magnetic method
	3.1 <i>Magnetic properties</i>
	3.2 <i>The magnetic field of the Earth</i>
	3.3 <i>Magnetic instruments</i>
	3.4 <i>Magnetic survey practice</i>
	3.5 <i>Simple magnetic interpretation</i>
60	4 Radioactivity surveys
	4.1 <i>Natural radiation</i>
	4.2 <i>Radiation detectors</i>
	4.3 <i>Radiometric surveys</i>
72	5 Electric current methods— general considerations
	5.1 <i>Resistivity</i>
	5.2 <i>Electrode arrays</i>
	5.3 <i>Equipment for resistivity surveys</i>

88	6 Direct-current methods
	6.1 <i>SP surveys</i>
	6.2 <i>Resistivity profiling</i>
	6.3 <i>Resistivity depth-sounding</i>
98	7 Induced polarization
	7.1 <i>Polarization fundamentals</i>
	7.2 <i>Time-domain IP surveys</i>
	7.3 <i>Frequency-domain surveys</i>
	7.4 <i>Handling IP data</i>
107	8 Electromagnetic methods
	8.1 <i>Induction principles</i>
	8.2 <i>Continuous-wave systems</i>
	8.3 <i>Other e.m. techniques</i>
123	9 VLF methods
	9.1 <i>VLF radiation</i>
	9.2 <i>VLF instruments</i>
	9.3 <i>VLF maps</i>
136	10 Seismic methods—general considerations
	10.1 <i>Seismic waves</i>
	10.2 <i>Seismic sources</i>
	10.3 <i>Detection of seismic waves</i>
	10.4 <i>Recording seismic waves</i>
153	11 Seismic reflection
	11.1 <i>Reflection theory</i>
	11.2 <i>Reflection surveys</i>
161	12 Seismic refraction
	12.1 <i>Refraction surveys</i>
	12.2 <i>Field interpretation</i>
	12.3 <i>Limitations of the refraction method</i>
176	Appendix Terrain corrections for Hammer zones B to M
178	References and further reading
180	Index
