

Table of Contents

Preface	vii
A Material Properties.....	1
1 Historical overview	3
2 Glare features	23
3 Next Generation Fibre Metal Laminates.....	39
4 Long-term behaviour	53
5 Material design allowables and qualification.....	69
6 New aluminium alloys for Glare.....	79
B Methods.....	99
7 Stress-strain curve	101
8 Shear yield strength.....	111
9 Blunt notch strength	117
10 Stability	133
11 Fatigue	155
12 Fatigue of riveted joints	173
13 Residual strength.....	197
14 Damage tolerance aspects	219
C Design Aspects.....	235
15 Fuselage barrel design and design for manufacturing.....	237
16 Cut-outs; door surrounding	255
17 Detailed design concepts.....	267
18 Numerical modelling: delamination buckling.....	281
19 Glare – from invention to innovation.....	299
20 Secondary applications	309

D	Production	325
21	Machineability	327
22	Formability.....	337
23	Curved panels.....	355
24	Quality control	369
E	Safety, Maintenance and Inspection.....	381
25	Inspection and maintenance	383
26	Burn-through and lightning strike	399
27	Impact properties	409
28	Corrosion	427
29	Riveted repairs	441
30	Bonded repair patches.....	451
31	Bonded repairs for C-5A fuselage crown cracking	477
32	Eddy current inspection	499
33	Glare as part of Sustainable and Environmentally Sound Engineering	513
	Authors and Affiliations.....	525
	Sponsors	527
