Acknowledgment	xv
Preface	xvii
List of Figures	xxv
List of Tables	xxxix
List of Symbols	xxxiii
List of Examples	xli
1 Introduction	1
1.1 Basic Concepts	1
1.2 The Design Process	5
1.3 Composites Design Methods	8
1.4 Design for Reliability	9
1.4.1 Stochastic Representation	11
1.4.2 Reliability-based Design	12
1.4.3 Load and Resistance Factor Design	15
1.4.4 Determination of Resistance Factors	16
1.4.5 Determination of Load Factors	17
1.4.6 Limit States Design	18
1.5 Fracture Mechanics	18
Exercises	21
2 Materials	27
2.1 Fiber Reinforcements	28
2.2 Fiber Types	29
2.2.1 Glass Fibers	29
2.2.2 Silica and Quartz Fibers	30
2.2.3 Carbon Fibers	31
2.2.4 Carbon Nanotubes	33
2.2.5 Organic Fibers	35
2.2.6 Boron Fibers	36

2.2.7	Ceramic Fibers	36
2.2.8	Basalt Fibers	36
2.2.9	Metallic Fibers	37
2.3	Fiber–Matrix Compatibility	37
2.4	Fiber Forms	38
2.4.1	Continuous and Discontinuous Fibers	38
2.4.2	1D Textiles: Strand, Tow, End, Yarn, and Roving	40
2.4.3	2D Textiles: Fabrics	42
2.5	Matrix Materials	45
2.6	Thermoset Matrices	48
2.6.1	Polyester Resins	49
2.6.2	Vinyl Ester Resins	51
2.6.3	Epoxy Resins	51
2.6.4	Phenolic Resins	52
2.7	Thermoplastic Matrices	53
2.8	Creep, Temperature, and Moisture	54
2.9	Corrosion Resistance	57
2.10	Flammability	58
	Exercises	59
3	Manufacturing Processes	71
3.1	Hand Lay-up	72
3.2	Prepreg Lay-up	74
3.3	Bag Molding	75
3.4	Autoclave Processing	76
3.5	Compression Molding	78
3.6	Resin Transfer Molding	79
3.7	Vacuum Assisted Resin Transfer Molding	81
3.8	Pultrusion	83
3.9	Filament Winding	86
	Exercises	88
4	Micromechanics	91
4.1	Basic Concepts	92
4.1.1	Volume and Mass Fractions	92
4.1.2	Representative Volume Element	94
4.1.3	Heterogeneous Material	95
4.1.4	Anisotropic Material	95
4.1.5	Orthotropic Material	96
4.1.6	Transversely Isotropic Material	97
4.1.7	Isotropic Material	97
4.2	Stiffness	97
4.2.1	Longitudinal Modulus	98
4.2.2	Transverse Modulus	100
4.2.3	In-plane Poisson’s Ratio	102

4.2.4	In-plane Shear Modulus	103
4.2.5	Intralaminar Shear Modulus	106
4.2.6	Restrictions on the Elastic Constants	106
4.2.7	Stress Partitioning Parameter	107
4.2.8	Periodic Microstructure	109
4.3	Moisture and Thermal Expansion	112
4.3.1	Thermal Expansion	113
4.3.2	Moisture Expansion	114
4.3.3	Transport Properties	115
4.4	Strength	116
4.4.1	Longitudinal Tensile Strength	117
4.4.2	Longitudinal Compressive Strength	120
4.4.3	Fiber Microbuckling	121
4.4.4	Transverse Tensile Strength	128
4.4.5	Mode I Fracture Toughness	129
4.4.6	Transverse Compressive Strength	131
4.4.7	Mohr-Coulomb	131
4.4.8	In-plane Shear Strength	136
4.4.9	Mode II Fracture Toughness	138
4.4.10	Intralaminar Shear Strength	139
	Exercises	140
5	Ply Mechanics	143
5.1	Coordinate Systems	143
5.2	Stress and Strain	143
5.2.1	Stress	144
5.2.2	Strain	147
5.3	Stress-Strain Equations	149
5.4	Off-axis Stiffness	153
5.4.1	Coordinate Transformations	154
5.4.2	Stress and Strain Transformations	155
5.4.3	Stiffness and Compliance Transformations	159
5.4.4	Specially Orthotropic Lamina	162
	Exercises	164
6	Macromechanics	167
6.1	Plate Stiffness and Compliance	168
6.1.1	Assumptions	168
6.1.2	Strains	170
6.1.3	Stress Resultants	173
6.1.4	Plate Stiffness and Compliance	174
6.2	Computation of Stresses	180
6.3	Common Laminate Types	181
6.3.1	Laminate Description	182
6.3.2	Symmetric Laminates	182

6.3.3	Antisymmetric Laminate	184
6.3.4	Balanced Laminate	184
6.3.5	Quasi-isotropic Laminates	184
6.3.6	Cross-ply Laminate	189
6.3.7	Angle-ply Laminate	190
6.3.8	Specially Orthotropic Laminate	190
6.4	Laminate Moduli	192
6.5	Design Using Carpet Plots	194
6.5.1	Stiffness Controlled Design	196
6.5.2	Design for Bending	201
6.6	Hygrothermal Stresses	204
	Exercises	213
7	Strength	217
7.1	Lamina Failure Criteria	220
7.1.1	Strength Ratio	220
7.1.2	Maximum Stress Criterion	221
7.1.3	Maximum Strain Criterion	223
7.1.4	Interacting Failure Criterion	226
7.1.5	Hygrothermal Failure	232
7.2	Laminate First Ply Failure	233
7.2.1	In-Situ Strength	237
7.3	Laminate Strength	243
7.3.1	Ply Discount	243
7.3.2	Truncated-Maximum-Strain Criterion	246
7.4	Strength Design Using Carpet Plots	252
7.5	Stress Concentrations	258
7.5.1	Notched Plate Under In-plane Load	260
	Exercises	265
8	Damage	267
8.1	Continuum Damage Mechanics	267
8.2	Longitudinal Tensile Damage	269
8.3	Longitudinal Compressive Damage	273
8.4	Transverse Tension and In-plane Shear	277
8.4.1	Limitations	279
8.4.2	Approximations	280
8.4.3	Displacement Field	280
8.4.4	Strain Field	281
8.4.5	Laminate Reduced Stiffness	282
8.4.6	Lamina Reduced Stiffness	282
8.4.7	Fracture Energy	283
8.4.8	Solution Algorithm	285
8.4.9	Lamina Iterations	285
8.4.10	Laminate Iterations	285

Exercises 286

9 Fabric-reinforced Composites 289

9.1 Weave Pattern Description 289

9.2 Analysis 293

9.3 Tow Properties 297

9.4 Element Stiffness and Constitutive Relationship 301

9.4.1 Bending-Restrained Model 302

9.4.2 Bending-Allowed Model 303

9.5 Laminate Properties 305

9.5.1 Elastic Constants 305

9.5.2 Thermal and Moisture Expansion Coefficients 306

9.6 Failure Analysis 308

9.6.1 Stress Analysis 308

9.6.2 Damage Initiation, Evolution, and Fracture 310

9.6.3 Cross-ply Approximation 314

9.7 Woven Fabrics with Gap 316

9.8 Twill and Satin 318

9.8.1 Twill Weave with $n_g > 2, n_s = 1, n_i = 1$ 318

9.8.2 Twill Weave with $n_s = 1$ 321

9.8.3 Satin Weave with $n_i = 1$ 323

9.8.4 Twill and Satin Thermo-elastic Properties 325

9.9 Randomly Oriented Reinforcement 326

9.9.1 Elastic Moduli 326

9.9.2 Strength 328

Exercises 329

10 Beams 339

10.1 Preliminary Design 340

10.1.1 Design for Deflections 341

10.1.2 Design for Strength 343

10.1.3 Design for Buckling 345

10.1.4 Column Behavior 346

10.2 Thin-Walled Beams 348

10.2.1 Wall Constitutive Equations 352

10.2.2 Neutral Axis of Bending and Torsion 354

10.2.3 Axial Stiffness 356

10.2.4 Mechanical Center of Gravity 357

10.2.5 Bending Stiffness 358

10.2.6 Torsional Stiffness 364

10.2.7 Shear of Open Sections 367

10.2.8 Shear of Single-Cell Closed Section 376

10.2.9 Beam Deformations 377

10.2.10 Segment Deformations and Stresses 378

10.2.11 Restrained Warping of Open Sections 382

Exercises	383
11 Plates and Stiffened Panels	385
11.1 Plate Bending	386
11.2 Plate Buckling	387
11.2.1 All Edges Simply Supported	388
11.2.2 All Sides Clamped	391
11.2.3 One Free Edge	392
11.2.4 Biaxial Loading	392
11.2.5 Fixed Unloaded Edges	393
11.3 Stiffened Panels	393
11.3.1 Stiffened Panels under Bending Loads	394
11.3.2 Stiffened Panel under In-plane Loads	399
Exercises	406
12 Shells	409
12.1 Shells of Revolution	411
12.1.1 Symmetric Loading	412
12.2 Cylindrical Shells with General Loading	421
Exercises	427
13 Strengthening of Reinforced Concrete	429
13.1 Strengthening Design	431
13.2 Materials	433
13.2.1 Concrete	434
13.2.2 Steel Reinforcement	434
13.2.3 FRP	435
13.3 Flexural Strengthening of RC Beams	435
13.3.1 Unstrengthened Behavior	436
13.3.2 Strengthened Behavior	436
13.3.3 Analysis	437
13.3.4 Strong Strengthening Configuration (SSC)	439
13.3.5 Weak Strengthening Configuration (WSC)	441
13.3.6 Balanced Strengthening Configuration (BSC)	443
13.3.7 Serviceability Limit States	445
13.3.8 Summary Design Procedure: Bending	451
13.4 Shear Strengthening	456
13.4.1 Summary Design Procedure: Shear	460
13.5 Beam-column	463
13.5.1 Column: Pure Axial Compression	465
13.5.2 Summary Design Procedure: Column	468
13.5.3 Beam-column: Combined Axial Compression and Bending	471
13.5.4 Summary Verification Procedure: Beam-column	477
Exercises	487

<i>Table of Contents</i>	xiii
Appendix A Gauss Distribution	489
Appendix B Weibull Distribution	491
Appendix C Conversion of Units	495
Bibliography	497
Index	509
