Preface	ix
 Part I: DNA fingerprinting and behavioral ecology	
Introduction.....	3
<i>J.S.C. Smith and J.G.K. Williams</i>	
Arbitrary primer mediated fingerprinting in plants: Case studies in plant breeding, taxonomy and phylogeny	5
<i>G. Caetano-Anollés and P.M. Gresshoff</i>	
DNA amplification fingerprinting: A general tool with applications in breeding, identification and phylogenetic analysis of plants	17
<i>T. Lubjuhn, F.-W. Schwaiger and J.T. Epplen</i>	
The analysis of simple repeat loci as applied in evolutionary and behavioral sciences	33
<i>K. Weising, J. Ramser, D. Kaemmer and G. Kahl</i>	
Multilocus DNA fingerprinting and genetic relatedness in plants: A case study with banana and tomato	45
<i>M.P. Scott and S.M. Williams</i>	
Measuring reproductive success in insects	61
<i>H. Hadrys and M.T. Siva-Jothy</i>	
Unravelling the components that underlie insect reproductive traits using a simple molecular approach	75
<i>D.F. Westneat and M.S. Webster</i>	
Molecular analysis of kinship in birds: Interesting questions and useful techniques.....	91
 Part II: Population biology	
Introduction.....	129
<i>J.R. Powell</i>	
Molecular techniques in population genetics: A brief history....	131

<i>M. Kreitman and M.L. Wayne</i>	
Organization of genetic variation at the molecular level: Lessons from <i>Drosophila</i>	157
<i>M.V. Ashley and B.D. Dow</i>	
The use of microsatellite analysis in population biology: Background, methods and potential applications	185
<i>C. Schlötterer and J. Pemberton</i>	
The use of microsatellites for genetic analysis of natural populations	203
<i>G. Amato and J. Gatesy</i>	
PCR assays of variable nucleotide sites for identification of conservation units.....	215
<i>D.M. Rand</i>	
Concerted evolution and RApping in mitochondrial VNTRs and the molecular geography of cricket populations	227
<i>B. Streit, T. Städler, K. Kuhn, M. Loew, M. Brauer and B. Schierwater</i>	
Molecular markers and evolutionary processes in hermaphrodite freshwater snails	247
<i>A.P. Vogler</i>	
Extinction and the formation of phylogenetic lineages: Diagnosing units of conservation management in the tiger beetle <i>Cicindela dorsalis</i>	261
<i>S.J. O'Brien</i>	
Perspective on conservation genetics	275
 Part III: Molecular systematics	
Introduction.....	283
<i>F.H. Sheldon</i>	
Advances in the theory and practice of DNA-hybridization as a systematic method	285
<i>G.B. Hartl, R. Willing and K. Nadlinger</i>	
Allozymes in mammalian population genetics and systematics: Indicative function of a marker system reconsidered	299
<i>R.H. Thomas</i>	
Analysis of DNA from natural history museum collections	311
<i>W.C. Wheeler</i>	
Sources of ambiguity in nucleic acid sequence alignment	323

<i>R. DeSalle, C. Wray and R. Absher</i>	
Computational problems in molecular systematics	353
<i>A. Larson</i>	
The comparison of morphological and molecular data in phylogenetic systematics	371
<i>U.-R. Böhle, H. Hilger, R. Cerff and W.F. Martin</i>	
Non-coding chloroplast DNA for plant molecular systematics at the infrageneric level	391
<i>C.W. Cunningham and T.M. Collins</i>	
Developing model systems for molecular biogeography: Vicariance and interchange in marine invertebrates	405
<i>J. Hey</i>	
Bridging phylogenetics and population genetics with gene tree models	435
 Part IV: Speciation, development and genome organization	
Introduction	453
<i>A.R. Templeton</i>	
The role of molecular genetics in speciation studies	455
<i>H. Ochman and E.A. Groisman</i>	
The origin and evolution of species differences in <i>Escherichia</i> <i>coli</i> and <i>Salmonella typhimurium</i>	479
<i>B. Schierwater, A. Ender, K. Schwenk, P. Spaak and B. Streit</i>	
The evolutionary ecology of <i>Daphnia</i>	495
<i>M.D. Kane and N.E. Pierce</i>	
Diversity within diversity: Molecular approaches to studying microbial interactions with insects	509
<i>D. Tautz</i>	
Evolutionary analysis of genes involved in early embryonic pattern formation in <i>Drosophila</i>	525
<i>D.K. Jacobs</i>	
Developmental genes and the origin and evolution of Metazoa ..	537
<i>W.A. Müller</i>	
To what extent does genetic information determine structural characteristics and document homologies?	551
<i>G.P. Wagner</i>	
Evolution and multi-functionality of the chitin system	559

<i>D.L. Hartl and E.R. Lozovskaya</i>	
Genome evolution: Between the nucleosome and the chromosome.	579
<i>E. Routman and J.M. Cheverud</i>	
Individual genes underlying quantitative traits: Molecular and analytical methods	593
<i>E.A. Zimmer</i>	
Perspectives on future applications of experimental biology to evolution	607
Subject index	617
