Contents

Preface xiii

1. Overview of X-Ray Scattering and Diffraction Theory and Techniques **1**

Oliver H. Seeck

1.1 Scattering at Single Electrons 2
1.2 Scattering in Bulk Matter 5
1.2.1 Scattering in Disordered Matter 6
1.2.2 Scattering in Crystalline Matter 7
1.2.3 Scattering at Powders of Crystalline Matter 10
1.3 Scattering at Surfaces 12
1.3.1 Scattering at Crystal Surfaces 14
1.3.2 Scattering at Surfaces with Density Profile 16
1.3.3 Scattering at Rough Surfaces 19
1.4 Some Dynamical Scattering Theory 22

2. Scattering and Diffraction Beamlines at Synchrotron Radiation Sources **29**

Oliver H. Seeck

2.1 Synchrotron Radiation Sources 31
2.1.1 Bending Magnets 32
2.1.2 Wigglers 37
2.1.3 Undulators 38
2.1.4 Undulators at X-Ray Free Electron Lasers 43
2.2 Brilliance 45
2.3 Beamline Optics 47

3. Micro- and Nanodiffraction **55**

Christina Krywka and Martin Müller

3.1 Introduction 55
3.2 X-Ray Focusing Optics 56

3.2.1 Refractive Optics 58
3.2.1.1 Metal compound refractive lenses 58
3.2.1.2 Silicon nanofocusing refractive lenses 60
3.2.1.3 Diamond lenses 61
3.2.1.4 Polymer lenses 62
3.2.2 Diffractive Optics 62
3.2.2.1 Fresnel zone plates 62
3.2.3 Reflective Optics 65
3.2.3.1 Kirkpatrick–Baez mirror 65
3.2.3.2 Multilayer KB mirror 67
3.2.4 Beam Concentrating and Collimating Elements 67
3.2.4.1 Capillaries 67
3.2.4.2 Waveguides 69
3.3 Experiments 71
3.3.1 X-Ray Micro- and Nanodiffraction Instrumentation 72
3.3.2 Examples of Micro- and Nanodiffraction Experiments 74
3.3.2.1 Small beams and crystallographic parameters 75
3.3.2.2 μSAXS on single-cellulose fibers 77
3.3.2.3 2D microdiffraction scanning of the wood cell wall 78
3.3.2.4 In situ deformation of single wood cells 81
3.3.3 Beam Damage in Microdiffraction Experiments 82
3.4 Summary 83

4. Small-Angle X-Ray Scattering 89
Ulla Vainio
4.1 Introduction 90
4.2 Experimental Setup 91
4.2.1 Sample Cells and Optimal Sample Thickness 93
4.2.2 Corrections to Experimental Data 94

4.2.3 Absolute Intensity Scale 96
4.3 Theory 97
4.3.1 Scattering Length Density 99
4.3.2 Power Laws 100
4.3.3 Porod Constant 102
4.3.4 Scattering from Particles 103
4.3.4.1 Guinier approximation 105
4.3.4.2 Form factor 106
4.3.4.3 Structure factor 107
4.3.4.4 Polydispersity 109
4.3.4.5 Distance distribution function 110
4.3.4.6 Kratky plot and Porod invariant 111
4.3.5 Scattering from Fluctuations 113
4.3.6 Generalized Scattering Functions 113
4.4 Radiation Damage 114
4.5 BioSAXS 115
4.6 GISAXS 115
4.7 ASAXS 118

5. The X-Ray Standing Wave Technique: Fourier Analysis with Chemical Sensitivity 129
Jörg Zegenhagen
5.1 Introduction 129
5.2 Formation of an XSW 132
5.3 XSW Analysis 133
5.4 XSW Structure Factor versus XRD Structure Factor 136
5.5 XSW Fourier Analysis: Imaging of Mn In GaAs 137
5.6 Summary 141

6. Inelastic X-Ray Scattering from Phonons 145
Alexeï Bosak and Michael Krisch
6.1 Introduction 145
6.2 General Formalism 148
6.3 Experimental Technique 150
6.4 Mapping of Phonon Dispersion Surfaces 152
6.5 Combining IXS and TDS 154

8.4 Antiferromagnetic Coupling in Fe/Cr Multilayers 218
8.5 Spatially Resolved Magnetic Reversal in an Exchange Bias Layer System 220
8.6 Conclusion and Outlook 225

9. Reflectivity at Liquid Interfaces 229
Bridget M. Murphy
9.1 Introduction 230
9.2 X-Ray Reflectivity 231
9.3 Fresnel Reflectiviy 231
9.4 Roughness at Liquid Surfaces 234
9.5 Kinematic Scattering Theory for Liquid Surfaces 237
9.5.1 Experimental Considerations 239
9.5.2 Bulk Scattering 240
9.6 Instrumentation 241
9.6.1 Single-Crystal Liquid Diffractometer 241
9.6.2 High-Energy Liquid Diffractometer 241
9.6.3 Double-Crystal Liquid Diffractometer 243
9.7 Examples 245
9.7.1 Reflectivity from Water 245
9.7.2 Reflectivity from Liquid Mercury 247
9.8 Summary 248

10. X-Ray Diffraction at Extreme Conditions: Today and Tomorrow 255
Hanns-Peter Liermann
10.1 Introduction 255
10.1.1 Why X-Ray Diffraction at Extreme Conditions 257
10.1.1.1 Precise high-P and high-T equation of state studies 258
10.1.1.2 Studies on crystallographic properties 260
10.1.1.3 Phase stabilities studies 262
10.1.1.4 Elastic–plastic behavior of mantle minerals 263
10.1.2 LVP vs. DAC: Advantages and Disadvantages 266

10.1.3 The Future of X-Ray Diffraction at Extreme Conditions in the DAC at Synchrotron Facilities 267
10.2 Standard X-Ray Diffraction Techniques and Sample Environments Used at Extreme Conditions 268
10.2.1 Powder Diffraction at Simultaneous High Pressure and Temperature in the DAC 269
10.2.1.1 Laser-heated DAC 269
10.2.1.2 Resistive-heated DAC 274
10.2.2 Single Crystal Diffraction in the DAC at Simultaneous High Pressure and Temperature 279
10.2.3 Determination of Pressure at High Temperatures 281
10.2.4 Diffraction on Nano-Crystalline Powders, Amorphous Solid and Liquids: Use of the Total Scattering Function in the DAC 285
10.3 New Directions in Extreme Conditions Research at the Third- and Fourth-Generation Light Sources 287
10.3.1 Types of Dynamic Experiments to Be Conducted at the Third- and Fourth-Generation Sources 291
10.3.2 Possible Single-Exposure and Pump and Probe Experiments Using the Time Structure of PETRA III (ECB) and the European XFEL (HED) for Dynamic Experiments at Extreme Conditions 293
10.3.2.1 Single exposure experiments at third generation synchrotron 293
10.3.2.2 Pump and probe experiments at third generation synchrotron 294
10.3.2.3 Single exposure experiments at fourth generation XFEL 296

10.3.2.4 Pump and probe experiments at the fourth-generation XFEL 296
10.4 Summary 298

11. Synchrotron Tomography **315**
Astrid Haibel
11.1 Measurement Principle of Synchrotron Tomography 316
11.1.1 Monochromatization 317
11.2 Absorption Tomography 318
11.3 Phase-Contrast Tomography 320
11.3.1 Direct Phase-Contrast Methods 321
11.3.2 Indirect Phase-Contrast Methods 322
11.4 Tomography with Magnifying X-Ray Optics 325
11.5 Tomographic Reconstruction 326
11.5.1 Fourier Slice Theorem 327
11.6 Image Artifacts 329
11.7 Applications and Quantitative 3D Image Analysis 332

12. Coherent X-Ray Diffraction Imaging of Nanostructures **341**
Ivan A. Vartanyants and Oleksandr M. Yefanov
12.1 Introduction 341
12.2 Coherent and Partially Coherent Scattering on Crystals 345
12.2.1 Coherent Scattering from a Finite Size Crystal 346
12.2.2 Coherent Scattering from a Finite-Size Crystal with a Strain 355
12.2.3 Partially Coherent Scattering from a Finite-Size Crystal 358
12.3 Experimental Examples 366
12.3.1 Coherent X-Ray Imaging of Defects in Colloidal Crystals 366
12.3.2 Coherent Diffraction Tomography of Nanoislands from Grazing Incidence Small-Angle X-Ray Scattering 370
12.3.3 Coherent-Pulse 2D Crystallography at Free-Electron Lasers 374
12.4 Summary 377

13. X-Ray Photon Correlation Spectroscopy **385**
Christian Gutt and Michael Sprung
13.1 Introduction 385
13.2 Theory 387
13.2.1 Equilibrium Fluctuations 387
13.2.2 Two-Time Correlation Functions 389
13.3 XPCS via Split and Delay Techniques at XFEL Sources 391
13.4 X-Ray Cross-Correlation Analysis—Local Bond Order in Liquids and Glasses 392
13.5 Designing XPCS Experiments 393
13.6 Experimental XPCS Setup 396
13.7 Examples 398
13.7.1 Surface Dynamics of Thin Polymer Films 398
13.7.2 Measuring Atomic Diffusion with Coherent X-Rays 403
13.7.3 Antiferromagnetic Domain Wall Fluctuations 406
13.7.4 Reentrant Glassy Behavior 409
13.7.5 Dynamical Heterogeneity in an Aging Colloidal Gel 410
13.7.6 Local Bond Order in Colloidal Glasses 412
13.7.7 Summary 415

Index 421
