

Table of Contents

Preface v

1. Introduction to Graphene	1
1.1. Allotropes of Carbon	1
1.2. Properties of Graphene	6
1.3. Synthesis of Graphene	11
1.4. Characterization of Graphene	16
1.5. Graphene as a Nanofiller in Composites	22
1.6. References	24
2. Graphene Polymer Composites: Processing and Characterization of Their Mechanical, Electrical, and Thermal Properties	29
2.1. Processing and Dispersion of Graphene in Polymers	30
2.2. Tensile Properties: Young's Modulus and Ultimate Tensile Strength	34
2.3. Compressive Properties: Buckling Stability	44
2.4. Fracture Toughness	50
2.5. Fatigue Resistance	57
2.6. Toughening Mechanisms	60
2.7. Characterizing the Graphene/Matrix Interface	70
2.8. Characterizing the Interphase in Graphene Polymer Composites	78
2.9. Viscoelastic Properties	83
2.10. Wear Properties	86

2.11. Creep	92
2.12. Electrical Conductivity	97
2.13. Thermal Conductivity	105
2.14. Graphene Nanoribbon-based Composites	111
2.15. References	122
3. Hybrid Graphene/Microfiber Composites	127
3.1. Processing of Hierarchical Graphene Composites	128
3.2. Testing of Hierarchical Graphene Composites	130
3.3. Conclusion	137
3.4. References	138
4. Graphene Ceramic and Graphene Metal-Matrix Composites	141
4.1. Ceramic Matrix Composites	142
4.2. Metal Matrix Composites	152
4.3. References	160
5. Graphene Colloids and Coatings	163
5.1. Graphene Oxide Colloids	163
5.2. Functionalized Graphene Oxide Colloids	164
5.3. Reduced Graphene Oxide Colloids	165
5.4. Graphene Colloids Stabilized by Surfactants	167
5.5. Applications of Graphene Colloids	170
5.6. References	183
