Contents

Contributors ix

1 Parsimony and phylogenetics in the genomic age 1
Victor A. Albert

I Philosophical aspects of parsimony analysis, including comparison with model-based approaches

2 What is the rationale for 'Ockham's razor' (a.k.a. parsimony) in phylogenetic inference? 15
Arnold G. Kluge

3 Parsimony and its presuppositions 43
Elliott Sober

II Parsimony, character analysis, and optimization of sequence characters

4 The logic of the data matrix in phylogenetic analysis 57
Brent D. Mishler

5 Alignment, dynamic homology, and optimization 71
Ward C. Wheeler

6 Parsimony and the problem of inapplicables in sequence data 81
Jan E. De Laet

III Computational limits of parsimony analysis: from historical aspects to competition with fast model-based approaches

7 The limits of conventional cladistic analysis 119
Jerrold I. Davis, Kevic C. Nixon, and Damon P. Little

8 Parsimony and Bayesian phylogenetics 148
Pablo A. Goloboff and Diego Pol

IV Mathematical attributes of parsimony

9 Maximum parsimony and the phylogenetic information in multistate characters 163
Mike Steel and David Penny

V Parsimony and genomics

10 Using phylogeny to understand genomic evolution 181
David A. Liberles

11 Dollo parsimony and the reconstruction of genome evolution 190
Igor B. Rogozin, Yuri I. Wolf, Vladimir N. Babenko, and Eugene V. Koonin
