|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Preface                                                                                                                                                                                                                                                            | xiii |
| List of Authors                                                                                                                                                                                                                                                    | x    |
| <br><b>I. Introduction</b>                                                                                                                                                                                                                                         |      |
| 1. Adaptive radiation and molecular systematics: issues and approaches<br><i>Thomas J. Givnish</i>                                                                                                                                                                 | 1    |
| 2. Homoplasy in molecular vs. morphological data: the likelihood of correct phylogenetic inference<br><i>Thomas J. Givnish and Kenneth J. Sytsma</i>                                                                                                               | 55   |
| <br><b>II. Integrative studies</b>                                                                                                                                                                                                                                 |      |
| 3. Adaptive radiation of the Hawaiian silversword alliance: congruence and conflict of phylogenetic evidence from molecular and non-molecular investigations<br><i>Bruce G. Baldwin</i>                                                                            | 103  |
| 4. The chronicle of marsupial evolution<br><i>Mark S. Springer, John A. W. Kirsch, and Judd A. Chase</i>                                                                                                                                                           | 129  |
| 5. Evolutionary origins of phenotypic diversity in <i>Daphnia</i><br><i>John K. Colbourne, Paul D. N. Hebert, and Derek J. Taylor</i>                                                                                                                              | 163  |
| 6. Evolutionary trends in the ecology of New World monkeys inferred from a combined phylogenetic analysis of nuclear, mitochondrial, and morphological data<br><i>Inés Horovitz and Axel Meyer</i>                                                                 | 189  |
| 7. Adaptive radiation in the aquatic plant family Pontederiaceae: insights from phylogenetic analysis<br><i>Spencer C. H. Barrett and Sean W. Graham</i>                                                                                                           | 225  |
| 8. Molecular evolution and adaptive radiation in <i>Brocchinia</i> (Bromeliaceae: Pitcairnioideae) atop tepuis of the Guayana Shield<br><i>Thomas J. Givnish, Kenneth J. Sytsma, James F. Smith, William J. Hahn, David H. Benzing, and Elizabeth M. Burkhardt</i> | 259  |

### III. Convergence

9. You aren't (always) what you eat: evolution of nectar-feeding among Old World fruitbats (Megachiraptera: Pteropodidae) 313  
*John A. W. Kirsch and François-Joseph Lapointe*
10. Leapfrog radiation in floral and vegetative traits among twig epiphytes in the orchid subtribe Oncidiinae 331  
*Mark W. Chase and Jeffrey D. Palmer*
11. Adaptation, cladogenesis, and the evolution of habitat association in North American tiger beetles: a phylogenetic perspective 353  
*Alfried P. Vogler and Paul Z. Goldstein*

### IV. Rapid radiations

12. Molecular phylogenetic tests of speciation models in Lake Malawi cichlid fishes 375  
*Peter N. Reinthal and Axel Meyer*
13. Rapid radiation due to a key innovation in columbines (Ranunculaceae: *Aquilegia*) 391  
*Scott A. Hodges*
14. Origin and evolution of *Argyranthemum* (Asteraceae: Anthemideae) in Macaronesia 407  
*Javier Francisco-Ortega, Daniel J. Crawford, Arnaldo Santos-Guerra, and Robert K. Jansen*

### V. Reproductive strategies

15. Plant-pollinator interactions and floral radiation in *Platanthera* (Orchidaceae) 433  
*Jeffrey R. Hapeman and Ken Inoue*
16. Phylogenetic perspectives on the evolution of dioecy: adaptive radiation in the endemic Hawaiian genera *Schiedea* and *Alsinodendron* (Caryophyllaceae: Alsinoideae) 455  
*Ann K. Sakai, Stephen G. Weller, Warren L. Wagner, Pamela S. Soltis, and Douglas E. Soltis*
17. Ecological and reproductive shifts in the diversification of the endemic Hawaiian *Drosophila* 475  
*Michael P. Kambyzellis and Elysse M. Craddock*

**VI. Character divergence and community assembly**

18. History of ecological selection in sticklebacks: uniting experimental and phylogenetic approaches 511  
*Eric B. Taylor, John Donald McPhail, and Dolph Schluter*
19. Phylogenetic studies of convergent adaptive radiations 535  
in Caribbean *Anolis* lizards  
*Todd Jackman, Jonathan B. Losos, Allan Larson, and Kevin de Queiros*

**VII. Macroevolutionary patterns**

20. Molecular and morphological evolution during the post-Palaeozoic diversification of echinoids 559  
*Andrew B. Smith and D. T. J. Littlewood*
21. How fast is speciation? Molecular, geological, and phylogenetic evidence from adaptive radiation of fishes 585  
*Amy R. McCune*
