<i>About the Authors</i>	<i>xiii</i>
<i>Acknowledgment</i>	<i>xxiv</i>
<i>Foreword</i>	<i>xxv</i>
<i>Preface</i>	<i>xxvii</i>

1. Towards More Sustainable Chemical Engineering Processes: Integrating Sustainable and Green Chemistry Into the Engineering Design Process	1
D.J.C. Constable, M. Gonzalez, S.A. Morton	
Underpinnings of Green Chemistry	1
The Principles and Implications	5
Problems With Chemicals and Reaction Spaces	12
Thinking About What More Sustainable Chemistry and Chemical Manufacturing Might Look Like	17
Tying It All Together	28
Disclaimer	31
References	31
2. Separations Versus Sustainability: There Is No Such Thing As a Free Lunch	35
L.M. Vane	
The Separations Dilemma and Imperative	35
Methods of Analysis	38
Separation Alternatives	41
Examples	53
Concluding Thoughts	61
Disclaimer	62
References	62
3. Conceptual Chemical Process Design for Sustainability	67
R.L. Smith	
Conceptual Chemical Process Design	67
Sustainability Approach for Chemical Processes	70
Example: Chlor-Alkali Production with Human Toxicity Potential Analysis	72
Discussion	81
Conclusions	82
Disclaimer	82
References	82

4. Process Integration for Sustainable Design	87
M.M. El-Halwagi	
Introduction	87
Mass Integration	88
Property Integration	92
Energy Integration	96
Multiscale Approaches	99
Conclusions	110
References	111
5. Modeling and Advanced Control for Sustainable Process Systems	115
F.V. Lima, S. Li, G.V. Mirlekar, L.N. Sridhar, G. Ruiz-Mercado	
Introduction to Sustainable Process Systems	115
Proposed Approach: Modeling, Advanced Control, and Sustainability Assessment	118
Case Study: Fermentation for Bioethanol Production System	127
Sustainability Assessment and Process Control	135
Conclusions and Future Directions	136
Nomenclature	136
Acknowledgments	138
Disclaimer	138
References	138
6. Sustainable Engineering Economic and Profitability Analysis	141
Y. Jiang, D. Bhattacharyya	
Introduction	141
Economic Sustainability Analysis	142
Environmental Sustainability Analysis	145
Social Sustainability Analysis	148
Evaluation of Design Alternatives by Considering Various Sustainability Measures	151
Example: Bioethanol Process	151
Concluding Remarks	164
Nomenclature	164
References	165
7. Managing Conflicts Among Decision Makers in Multiobjective Design and Operations	169
V.M. Zavala	
Introduction	169
Approach	170

Illustrative Examples	173
Conclusions	179
Acknowledgments	179
References	180
8. Sustainable System Dynamics: A Complex Network Analysis	181
U. Diwekar	
Introduction	181
Sustainable System Dynamic Models	182
Controllability Analysis	189
Optimal Control for Deriving Techno-Socio-Economic Policies	195
Summary	201
References	201
9. Process Synthesis by the P-Graph Framework Involving Sustainability	203
B. Bertok, I. Heckl	
Introduction	203
Illustrative Example	206
Basics of the P-Graph Framework	208
Software: PNS Draw and PNS Studio	211
Summary	224
References	224
10. Sustainability Assessment and Performance Improvement of Electroplating Process Systems	227
H. Song, N. Bhadbhade, Y. Huang	
Introduction	227
Fundamentals for Process Sustainability	229
Sustainability Metrics System	230
Sustainability Assessment Framework	233
Case Study	237
Concluding Remarks	246
Acknowledgment	247
References	247
11. Strategic Sustainable Assessment of Retrofit Design for Process Performance Evaluation	249
A. Carvalho	
Introduction	249
State of the Art	250

Framework for Assessment of Retrofit Design Alternatives	259
Case Study: β -Galactosidase Production	265
Conclusions	270
References	271
12. Chemical Engineering and Biogeochemical Cycles: A Techno-Ecological Approach to Industry Sustainability	275
S. Singh, B.R. Bakshi	
Motivation	275
Life Cycle Analysis for Chemical Industry Interaction with Carbon and Nitrogen Cycles	279
Chemical Industry Profile for Carbon	283
Chemical Industry Profile for Nitrogen	287
Techno-Ecological Approach and Chemical Industry Sustainability	290
References	293
13. Challenges for Model-Based Life Cycle Inventories and Impact Assessment in Early to Basic Process Design Stages	295
S. Papadokonstantakis, P. Karka, Y. Kikuchi, A. Kokossis	
Introduction	295
LCI Aspects in Early to Basic Process Design Stages	300
Case Studies	305
Case Study 1: LCA Aspects of Solvent Selection Postcombustion CO ₂ Capture	305
Case Study 2: LCA Aspects in the Design of Lignocellulosic Biorefineries	308
Case Study 3: Poly(methyl methacrylate) Recycling Process	317
Conclusions and Outlook	321
References	323
14. Life Cycle Sustainability Assessment: A Holistic Evaluation of Social, Economic, and Environmental Impacts	327
L.Q. Luu, A. Halog	
Introduction	327
Methodologies for Assessing Life Cycle Sustainability	327
Three Pillars of Sustainability and the Need for Life Cycle Sustainability Assessment	333
Case Study of Rice Husk-Based Electricity and Coal-Fired Electricity	335
Goal and Scope Definition	337
Inventory Analysis	340
Results	342
Integrated Results of Sustainability Assessment	346

Some Remarks on the Methodology	348
Conclusion	349
References	350
15. Embedding Sustainability in Product and Process Development—The Role of Process Systems Engineers	353
C. Jiménez-González	
Introduction	353
Material Selection	354
Process Design, Synthesis, and Integration	360
Process Intensification	366
Hazard Assessments and Inherent Safety	367
Impacts Throughout the Supply Chain—Life Cycle Thinking	370
Modeling and Computer-Aided Tools	371
Future Outlook	373
Acknowledgments	375
References	375
