About the Editors	xvii

PART I CELLULOSIC BIOMASS PROCESSING & BIOREFINERY ROAD MAP

CHAPTER 1 An Overview of Existing Individual Unit Operations.....	3
1.1 Introduction.....	3
1.2 Biochemical Processes.....	5
1.2.1 Biomass Pretreatment Technologies and their Challenges.....	7
1.2.2 Physical Pretreatment	9
1.2.3 Chemical and Physicochemical Pretreatment.....	10
1.2.4 Biological Pretreatment	11
1.3 Enzymatic Hydrolysis.....	11
1.3.1 Enzymatic Processes.....	11
1.3.2 Factors Affecting the Enzymatic Process	12
1.4 Ethanol Production by Fermentation	12
1.4.1 Process Requirements for Ethanol-Fermenting Organisms	13
1.4.2 Fermentation Operations and Processes	14
1.4.3 Fermentation Inhibitors	14
1.4.4 Product Recovery.....	15
1.4.5 Methods for Breaking the Azeotrope	16
1.5 Butanol Production by Fermentation.....	16
1.5.1 Processes for <i>n</i> -Butanol Production.....	16
1.5.2 Fermentation Modes of Operation.....	18
1.5.3 Recovery and In Situ Separation	18
1.5.4 Detoxification of Inhibitory Compounds.....	20
1.5.5 Strain Improvement	21
1.6 Thermochemical Conversion	22
1.6.1 Initial Processes—Preparation Stages	22
1.6.2 Thermochemical Treatment—Gasification.....	22
1.6.3 Cleaning and Conditioning of Syngas	23
1.6.4 Product Manufacturing Stage—Catalytic Reaction and Syngas Fermentation.....	24
1.6.5 Syngas Fermentation	24

1.7 Perspectives.....	25
References	26
CHAPTER 2 Biomass for Biorefining: Resources, Allocation, Utilization, and Policies.....	37
2.1 Introduction.....	37
2.1.1 Role of Biomass.....	37
2.1.2 Biomass Availability.....	38
2.1.3 Allocation of Supply.....	39
2.1.4 Overcoming Utilization Issues.....	39
2.1.5 Policies and Statutes	40
2.2 Biomass Resources	40
2.2.1 Types of Biomass.....	40
2.2.2 Supply of Biomass.....	42
2.2.3 Production of Biomass.....	44
2.3 Biomass Allocation.....	45
2.3.1 Uses of Biomass	45
2.3.2 Biomass Logistics.....	47
2.4 Biomass Utilization	47
2.4.1 Pretreatment of Biomass.....	47
2.4.2 Genetic Modification of Biomass	48
2.4.3 Biomass Sites of Use	49
2.5 Biomass Policies.....	50
2.5.1 Biofuel Policies.....	50
2.5.2 Land Use and GHG Requirements	51
2.5.3 Regulation of Genetic Engineering.....	52
2.6 Perspectives.....	54
References	55
CHAPTER 3 Biorefinery Roadmaps.....	59
3.1 Introduction: The Biorefinery Vision for Energy, Chemical, and Material Sustainability	59
3.2 Sustainability as a New Business Model	63
3.3 Achieving Integrated Processing	65
3.4 Perspectives.....	67
References	67
CHAPTER 4 Integration of (Hemi)-Cellulosic Biofuels Technologies with Chemical Pulp Production	73
4.1 Integrated Forest Biorefinery Concepts	73
4.1.1 Woody Biomass as a Multiproduct Feedstock.....	73
4.1.2 Opportunities for Integration	74
4.1.3 Recovery and Utilization of Non-Hemicellulose Fractions	75

4.2 Hemicelluloses Derived from Chemical Pulping Processes.....	79
4.2.1 Hemicelluloses.....	79
4.2.2 Hemicelluloses from Thermomechanical Pulping and Chemomechanical Pulping	80
4.2.3 Hemicelluloses from Sulfite Pulping	81
4.2.4 Hemicelluloses from Dissolving Pulp Production.....	82
4.2.5 Hemicellulose Preextractions Prior to Pulping: Autohydrolysis.....	83
4.2.6 Hemicellulose Preextractions Prior to Pulping: Alkaline Extraction.....	86
4.3 Integration of Hemicellulose Recovery and Utilization	88
4.3.1 Processing Options for the Generation of Products from Recovered Polymeric Hemicellulose.....	88
4.3.2 Processing Options for the Generation of Products from Hemicellulose Monomers.....	89
4.4 Perspectives.....	91
References	91
 CHAPTER 5 Integrated Processes for Product Recovery	 101
5.1 Introduction.....	101
5.2 Alternative Product Recovery Techniques.....	102
5.2.1 Adsorption	102
5.2.2 Liquid-liquid Extraction	104
5.2.3 Pervaporation	106
5.2.4 Vacuum Fermentation and Simultaneous Recovery	107
5.2.5 Gas Stripping	108
5.2.6 Use of Other Separation Techniques	109
5.3 Integrated Product Recovery Processes	110
5.3.1 Ethanol.....	110
5.3.2 Butanol.....	111
5.3.3 2,3-Butanediol	112
5.4 Perspectives.....	115
Acknowledgments.....	115
References	116

PART II CELLULOSIC ETHANOL

CHAPTER 6 Development of Growth-Arrested Bioprocesses with Corynebacterium glutamicum for Cellulosic Ethanol Production from Complex Sugar Mixtures.....	121
6.1 Introduction.....	121
6.2 What is a Growth-Arrested bioprocess?	122
6.2.1 Characteristics of Growth-Arrested Bioprocesses	122

6.2.2 Process Design Options for Growth-Arrested Bioprocesses ...	123
6.3 Research and Development for Cellulosic Ethanol Production	
by <i>C. glutamicum</i>	125
6.3.1 Metabolic Engineering for Highly Efficient Conversion of Sugar Mixtures	126
6.3.2 Tolerance to Fermentation Inhibitors Derived from Lignocellulosic Biomass.....	127
6.4 Other Applications of Growth-Arrested Bioprocess in	
Biorefineries.....	128
6.4.1 Amino Acids.....	128
6.4.2 Isobutanol.....	132
6.4.3 D-Lactic Acid	133
6.5 Perspectives.....	134
References	135
 CHAPTER 7 Consolidated Bioprocessing for Ethanol	
Production	141
7.1 Introduction.....	141
7.2 Biochemical Processes for Ethanol Production from Cellulosic	
Biomass.....	142
7.2.1 Pretreatment	142
7.2.2 Cellulase Production	142
7.2.3 Enzymatic Hydrolysis.....	144
7.2.4 Microbial Fermentation	144
7.2.5 Product Recovery	146
7.3 Development of Biomass Processing Configurations.....	146
7.4 Aspects of Consolidated Bioprocessing	147
7.4.1 Economic Benefits of CBP	147
7.5 Approaches to Developing CBP-enabling Microorganisms.....	149
7.5.1 The Native Strategy for Developing CBP-enabling Microorganisms	149
7.5.2 The Recombinant Strategy for Developing CBP-enabling Microorganisms	151
7.6 Perspectives.....	153
References	153
 CHAPTER 8 Integration of Ethanol Fermentation with Second	
Generation Biofuels Technologies.....	161
8.1 Integration of Fermentation into Cellulosic Biofuel Processes.....	161
8.2 Fermentation Approaches Employed in First-Generation	
Ethanol Processes	163
8.2.1 Processes for First-Generation Ethanol	163
8.2.2 Mode of Operation and Cell Recycle	164

8.3	Integration of Lignocellulose Hydrolyzate Fermentation.....	167
8.3.1	Hydrolyzate-Derived Inhibitors.....	168
8.3.2	Xylose Fermentation.....	169
8.3.3	High-Solids Integration and Fermentation Mode of Operation	170
8.3.4	Examples of Fermentation Integration in Cellulosic Biofuel Processes.....	171
8.4	Aerobic Yeast Cultivation for the Production of Cell Mass	172
8.4.1	Production of Yeast Cell Mass from Sugar and Starch Streams	172
8.4.2	Generation of Cell Mass from Hydrolyzates	174
8.5	Case Study: Aerobic Cultivation of <i>S. cerevisiae</i> TMB- 3400-FT30-3 on Dilute Acid-Pretreated Softwood Hydrolyzate.....	175
8.5.1	Media Requirements for Aerobic Growth	176
8.6	Perspectives.....	178
References		179

PART III CELLULOSIC BUTANOL

CHAPTER 9	Mixed Sugar Fermentation by Clostridia and Metabolic Engineering for Butanol Production	191
9.1	Introduction.....	191
9.2	Mixed-Sugar Fermentation by Solventogenic Clostridia	194
9.3	Metabolic Engineering of Solventogenic Clostridia for Butanol Production	196
9.3.1	Simultaneous and Efficient Use of Pentose and Hexose Sugars	196
9.3.2	Production of Enhanced Levels of Butanol	197
9.3.3	Elimination of Acetone Production	199
9.4	Perspectives.....	200
Acknowledgments		201
References		201
CHAPTER 10	Integrated Bioprocessing and Simultaneous Product Recovery for Butanol Production	205
10.1	Introduction	205
10.2	Recovery of Butanol by Adsorption.....	207
10.2.1	Use of Glucose	208
10.3	Recovery of Butanol by Extraction.....	208
10.3.1	Use of Glucose	208
10.3.2	Use of Whey Permeate	210

10.3.3 Extractive Production of Butanol from Lignocelluloses.....	211
10.4 Recovery of Butanol by Perstraction.....	212
10.4.1 Use of Glucose	212
10.4.2 Use of Potato Waste	212
10.4.3 Use of Whey Permeate or Lactose	212
10.4.4 Use of Lignocellulosic Biomass.....	213
10.5 Separation of Butanol by Gas Stripping.....	213
10.5.1 Use of Whey Permeate	213
10.5.2 Use of Glucose	214
10.5.3 Use of Cellulosic Hydrolyzates and Cellulosic Biomass	215
10.6 Recovery of Butanol by Reverse Osmosis	215
10.6.1 Use of Glucose	215
10.7 Recovery of Butanol by Pervaporation	216
10.7.1 Use of Glucose	216
10.7.2 Use of Whey Permeate	217
10.8 Recovery of Butanol Using a Vacuum	218
10.8.1 Use of Glucose	218
10.9 Process Economics of Butanol Production	218
10.10 Perspectives	219
References	219
CHAPTER 11 Integrated Production of Butanol from Glycerol	225
11.1 Introduction: Glycerol Glut.....	225
11.1.1 Value-Added Conversion of Glycerol	226
11.2 Glycerol-to-Butanol Conversion	227
11.2.1 Improving Product Yield and Productivity.....	228
11.2.2 Butanol Toxicity and Extractive Fermentation.....	229
11.3 Integrated Biorefinery.....	230
11.4 Perspectives	231
References	231

PART IV PROCESS ECONOMICS & FARM-BASED BIOREFINERY

CHAPTER 12 Process Economics of Renewable Biorefineries: Butanol and Ethanol Production in Integrated Bioprocesses from Lignocellulosics and Other Industrial By-Products	237
12.1 Introduction	237
12.2 Program for Material and Energy Balance and Economic Analysis	239

12.3	Process Development and Economics of Butanol Production from Corn	239
12.4	Process Economics of Butanol Production from Glycerol.....	243
12.5	Economics of Butanol Production from Lignocellulosic Biomass	245
12.6	Economics of Ethanol Production from Corn and Lignocellulosic Biomass	247
12.7	Perspectives	251
	Acknowledgments	252
	References	252
CHAPTER 13	Integrated Farm-Based Biorefinery.....	255
13.1	Introduction	255
13.2	The Integrated Farm-Based Biorefinery (IFBBR).....	257
13.3	Biological Conversion Chemistry	258
13.4	Mass-and-Energy Balances	261
13.5	Advantages of the IFBBR System over Corn Stover Ethanol Production	265
13.6	Perspectives	266
	Acknowledgment	269
	References	269
	Index	271
