Foreword	vii	9-3 Genetic differences between species, populations and individuals	99
1 Propositions	1	10 Speciation in the Galapagos Islands	102
2 Species	2	10-1 Fauna of the Galapagos	102
3 Variation within species	5	10-2 Galapagos reptiles	104
3-1 Individual variation	5	10-3 Galapagos birds	108
3-2 Geographic variation	6	10-4 Galapagos history and species	113
3-3 Polymorphism	10	11 Evolution beyond the species level	120
3-4 Variation under domestication	11	11-1 Classification	120
4 Heredity	14	11-2 Fossils and geology	127
4-1 Mendel's theory	14	11-3 Molecular evolution	133
4-2 The chromosome theory	21	11-4 'Hopeful monsters'	141
4-3 DNA and the genetic code	26	12 Proof and disproof	144
5 Genetics and variation	38	12-1 Science versus pseudo-science	144
5-1 Hybrid sterility	38	12-2 Is evolution science?	145
5-2 Individuals are unique	39	12-3 Alternative theories	147
5-3 Multiple alleles	40	12-4 A metaphysical research programme	149
5-4 Crossing-over	42	13 The origin and early evolution of life	153
6 Mutation	44	13-1 Prokaryotes and eukaryotes	153
6-1 Point mutations	44	13-2 The origin of prokaryotes	157
6-2 Chromosome mutations	47	13-3 The origin of eukaryotes	161
6-3 Polyploidy	51	13-4 The origin of sex	167
7 Natural selection theory	56	14 Evolution and man	172
7-1 Harmful mutations	58	14-1 Fossils versus molecules	172
7-2 Neutral mutations	65	14-2 Sociobiology	175
7-3 Favourable mutations	70	14-3 Human nature	178
8 Selection in action	76	15 Who's Who	180
8-1 Sickle-cell anaemia	76	Further reading	186
8-2 Industrial melanism	79	Glossary	188
8-3 Resistance to antibiotics	83	Index	193
8-4 Shell pattern in snails	85		
8-5 Social insects	87		
9 The origin of species	93		
9-1 Inconstant environments	93		
9-2 Barriers to gene exchange	94
