
Contents

Preface.....	xi
Acknowledgments.....	xiii
Authors.....	xv

Chapter 1	Introduction	1
1.1	Numbers	1
1.2	Carbon Cycle	2
1.3	Climate Change	3
1.4	Biomass Production	4
1.5	Land Use.....	5
1.6	Food and Fiber Production	7
1.7	Wood.....	11
1.8	Sustainable Use.....	11
1.9	Bioenergy.....	12
	Problems.....	14
	References	15
	Recommended Resources.....	15

Chapter 2	Energy	17
2.1	Introduction	17
2.2	Definitions of Energy and Power.....	17
2.3	Heat.....	19
2.4	Thermodynamics.....	19
2.5	Energy Dilemma in Light of the Laws of Thermodynamics.....	20
	2.5.1 Conservation.....	20
	2.5.2 Efficiency.....	20
2.6	Use of Fossil Fuels.....	23
	2.6.1 Petroleum.....	27
	2.6.2 Natural Gas	29
	2.6.3 Coal	30
2.7	Nuclear.....	32
2.8	Finite Resource.....	33
2.9	Summary	35
	Problems.....	36
	References	38
	Recommended Resources.....	39

Chapter 3	Sun.....	41
3.1	Solar Power.....	41
3.2	Electromagnetic Spectrum	41
3.2.1	Visible.....	44
3.2.2	Blackbody Radiation	44
3.3	Energy Balance of the Earth	44
3.4	Earth–Sun Motion	48
3.4.1	Earth Motion	49
3.4.2	Sun Position.....	50
3.5	Insolation	52
3.6	Solar Resource.....	52
	Problems.....	55
	References	56
	Recommended Resources.....	56
 Chapter 4	 Climate Change.....	 57
4.1	Climate Change-A.....	58
4.2	Greenhouse Effect.....	59
4.3	Atmospheric Carbon Dioxide.....	60
4.4	Intergovernmental Panel on Climate Change.....	62
4.5	Global Warming.....	63
4.6	Information and Comments.....	64
4.7	Geoengineering	66
4.8	Effect on the Biosphere	67
	Problems.....	67
	References	68
	Recommended Resources.....	69
 Chapter 5	 Plants	 71
5.1	Plant Basics.....	71
5.2	Biomass Resource.....	71
5.3	Valuable Parts of the Plants.....	74
5.3.1	Food/Fiber or Fuel.....	77
5.3.2	Value or Use Decides What Gets Planted.....	78
5.4	Where Can They Grow	78
5.5	Multi Seasonal	79
5.6	Multipurpose	81
5.7	Perennial Grasses	82
	Problems.....	82
	References	83
	Recommended Resources.....	84
		85

Chapter 6	Soil.....	87
6.1	Formation and Composition.....	90
6.1.1	Parent Material.....	90
6.1.2	Climate.....	90
6.1.3	Living Organisms.....	94
6.1.4	Landscape Position.....	94
6.1.5	Time.....	95
6.2	Soil Use, Preparation.....	95
6.3	Soil Conservation.....	96
6.4	Sustainability.....	97
	Problems.....	98
	References.....	99
	Recommended Resources.....	99
Chapter 7	Constraints.....	101
7.1	Water.....	101
7.2	Agronomy.....	109
7.3	Biomass Logistics.....	110
7.4	Other Constraints.....	111
7.4.1	Food Security.....	111
7.4.2	Environmental.....	111
7.4.3	Social.....	114
7.4.4	Economics.....	115
	Problems.....	116
	References.....	116
	Recommended Resources.....	117
Chapter 8	Heat and Power.....	119
8.1	Introduction.....	119
8.2	Stoves.....	122
8.2.1	Cook Stoves.....	124
8.2.2	Wood Stoves.....	125
8.2.3	Pellet Stoves.....	126
8.3	Heat and Electricity.....	127
8.3.1	Wood Pellets.....	129
8.3.2	Plantations.....	130
8.3.3	Municipal Solid Waste.....	131
8.3.4	Landfill Gas.....	133
8.3.5	Biogas.....	133
8.4	Biodigestors.....	133
	Problems.....	138
	References.....	139
	Recommended Resources.....	140
		141

Chapter 9	Biofuels.....	143
9.1	Ethanol.....	145
9.1.1	Process.....	148
9.1.2	Lignocellulosic	149
9.2	Biodiesel	150
9.2.1	Composition	152
9.2.2	Process.....	153
9.2.3	Examples	153
9.3	Microalgae.....	154
9.4	Biomethane.....	158
9.5	Biorefinery	158
9.6	Comments.....	159
	Problems.....	161
	References	162
	Recommended Resources.....	163
 Chapter 10	 Secondary Uses	 165
10.1	Energetics	165
10.2	By-Products	166
10.3	Greenhouse Gas Emissions	170
	Problems.....	172
	References	173
	Recommended Resources.....	174
 Chapter 11	 Institutional Issues.....	 175
11.1	United States.....	175
11.2	World	177
11.2.1	Global Bioenergy Partnership	177
11.2.2	Scope	178
11.2.3	UN Environment Programme	178
11.3	Regulations	179
11.4	Environmental Issues	180
11.5	Politics	181
11.6	Incentives.....	182
11.6.1	United States	183
11.6.1.1	Federal Support	185
11.6.1.2	State Support.....	188
11.6.1.3	Green Power	188
11.6.1.4	Net Metering.....	189
11.6.2	Other Countries	189
11.7	Externalities (Social Costs/Benefits)	191
11.8	Transmission.....	191
		193

Problems.....	194
References	195
Recommended Resources.....	196
 Chapter 12 Economics	199
12.1 Introduction	199
12.2 Factors Affecting Economics	201
12.3 Economic Analyses	203
12.3.1 Simple Payback	203
12.3.2 Cost of Energy.....	204
12.4 Life-Cycle Costs.....	206
12.5 Present Worth and Levelized Costs.....	208
12.6 Externalities.....	209
12.7 Project Development.....	209
12.8 Cost (Value) of Energy, Different Sources	211
12.8.1 Passive Solar.....	213
12.8.2 Active Solar Heat	214
12.8.3 Photovoltaics	214
12.8.4 Concentrating Solar Power.....	216
12.8.5 Wind.....	216
12.8.6 Geothermal Systems	218
12.8.7 Water	218
12.8.8 Village Power	218
12.8.9 Wind Diesel.....	220
12.9 Bioenergy.....	221
12.9.1 Heat and Power.....	221
12.9.2 Biofuels.....	222
12.10 Summary	224
12.11 The Future	225
Problems.....	226
References	227
Recommended Resources.....	228
 Chapter 13 Observations.....	231
13.1 Solid State Electronics.....	235
13.2 Internet.....	236
13.3 Geographic Information Systems.....	236
13.4 Satellites	237
13.5 Examples	237
13.5.1 Interactive Maps	237
13.5.2 Interactive Database	238
13.5.3 Tools	239
13.5.4 Other.....	239

13.6 Predictions	239
13.7 Science	240
13.8 Authors' Predictions	241
13.9 On the Down Side	242
Problems	244
References	245
Recommended Resources	245
Appendix	247
Index	253
