## **Part I Sugarcane for biofuels and bioproducts**

### **1 The sugarcane industry, biofuel, and bioproduct perspectives, 3**

*Ian M. O'Hara*

#### 1.1 Sugarcane – a global bioindustrial crop, 3

##### 1.2 The global sugarcane industry, 5

###### 1.2.1 Sugarcane, 5

###### 1.2.2 Sugarcane harvesting and transport, 6

###### 1.2.3 The raw sugar production process, 7

###### 1.2.4 The refined sugar production process, 9

###### 1.2.5 The sugar market, 11

##### 1.3 Why biofuels and bioproducts?, 11

###### 1.3.1 The search for new revenue, 11

###### 1.3.2 Sugar, ethanol, and cogeneration, 12

###### 1.3.3 Fiber-based biofuels and bioproducts, 13

###### 1.3.4 Climate change and renewable products, 13

###### 1.3.5 New industries for sustainable regional communities, 14

##### 1.4 Sugarcane biorefinery perspectives, 14

###### 1.4.1 The sugarcane biorefinery, 14

###### 1.4.2 The sustainability imperative, 17

###### 1.4.3 Future developments in biotechnology for sugarcane biorefineries, 18

##### 1.5 Concluding remarks, 19

##### References, 20

### **2 Sugarcane biotechnology: tapping unlimited potential, 23**

*Sudipta S. Bhowmik, Anthony K. Brinin, Brett Williams and Sagadevan G. Mundree*

#### 2.1 Introduction, 23

#### 2.2 History of sugarcane, sugarcane genetics, wild varieties, 24

- 2.3 Uses of sugarcane, 25
  - 2.3.1 Food and beverages, 25
  - 2.3.2 Biofuels and bioenergy, 26
  - 2.3.3 Fibers and textiles, 26
  - 2.3.4 Value-added products, 26
- 2.4 Sugarcane biotechnology, 26
  - 2.4.1 Limitations of sugarcane biotechnology, 29
- 2.5 Improvement of sugarcane – breeding versus genetic modification through biotechnology, 29
- 2.6 Genetic modification of sugarcane, 30
- 2.7 Paucity of high-quality promoters, 32
- 2.8 Opportunities for GM-improved sugarcane, 32
- 2.9 Improved stress tolerance and disease resistance, 35
  - 2.9.1 Stress tolerance, 35
  - 2.9.2 Drought, 35
  - 2.9.3 Salinity, 35
- 2.10 Naturally resilient plants as a novel genetic source for stress tolerance, 36
- 2.11 Disease resistance, 37
- 2.12 Industrial application of sugarcane, 39
- 2.13 How will climate change and expanded growing-region affect vulnerability to pathogens?, 40
- 2.14 Conclusion and perspectives, 41
- References, 42

## **Part II Biofuels and bioproducts**

- 3** Fermentation of sugarcane juice and molasses for ethanol production, 55  
*Cecília Laluce, Guilherme R. Leite, Bruna Z. Zavitoski, Thamires T. Zamaia and Ricardo Ventura*
  - 3.1 Introduction, 55
  - 3.2 Natural microbial ecology, 56
    - 3.2.1 *Saccharomyces* yeasts, 56
    - 3.2.2 Wild yeasts, 58
    - 3.2.3 Bacterial contaminants, 58
  - 3.3 Yeast identification, 60
    - 3.3.1 Identification of genetic and physiological phenotypes, 60
    - 3.3.2 Molecular identification methods, 61
  - 3.4 Cell surface and cell–cell interactions, 62
    - 3.4.1 Dissolved air flotation, 62
    - 3.4.2 Flocculation, 64
    - 3.4.3 Biofilms, 65
  - 3.5 Sugarcane juice and bagasse, 65

---

- 3.5.1 Harvesting of the sugarcane, 65
- 3.5.2 Reception and cleaning of sugarcane, 66
- 3.5.3 Juice extraction, 66
- 3.5.4 Juice clarification, 66
- 3.5.5 Juice concentration, 66
- 3.5.6 Quality of clarified juice, 67
- 3.6 Fermentation of juice and molasses, 67
  - 3.6.1 Starters yeasts, 67
  - 3.6.2 Raw materials used in fermentation, 67
  - 3.6.3 The fermentation, 68
- 3.7 Cogeneration of energy from bagasse, 68
- 3.8 Bioreactors and processes, 69
  - 3.8.1 Batch fermentation, 70
  - 3.8.2 Fed-batch fermentation, 70
  - 3.8.3 Multistage Stage Continuous Fermentation (MSCF) system, 72
- 3.9 Control of microbial infections, 73
- 3.10 Monitoring and controlling processes, 74
- 3.11 Concluding remarks and perspective, 76
  - Acknowledgments, 77
- References, 77

  

- 4 Production of fermentable sugars from sugarcane bagasse, 87**  
*Zhanying Zhang, Mark D. Harrison and Ian M. O'Hara*
  - 4.1 Introduction, 87
  - 4.2 Bioethanol from bagasse, 88
  - 4.3 Overview of pretreatment technologies, 90
  - 4.4 Pretreatment of bagasse, 91
    - 4.4.1 Dilute acid pretreatment, 91
    - 4.4.2 Alkaline pretreatment, 92
    - 4.4.3 Liquid hot water pretreatment, 93
    - 4.4.4 Organosolv pretreatment, 94
    - 4.4.5 Ionic liquid pretreatment, 97
    - 4.4.6 SO<sub>2</sub><sup>-</sup> and CO<sub>2</sub><sup>-</sup>-associated pretreatments, 98
  - 4.5 Enzymatic hydrolysis, 99
  - 4.6 Fermentation, 100
  - 4.7 Conclusions and future perspectives, 102
- References, 103

  

- 5 Chemicals manufacture from fermentation of sugarcane products, 111**  
*Karen T. Robins and Robert E. Speight*
  - 5.1 Introduction, 111

- 5.2 The suitability of sugarcane-derived feedstocks in industrial fermentation processes, 114
  - 5.2.1 Competing current applications of sugarcane products, 115
  - 5.2.2 Use of sugarcane products in fermentations, 117
- 5.3 Metabolism and industrial host strains, 121
  - 5.3.1 Metabolism of sucrose, 121
  - 5.3.2 Metabolism of lignocellulose-derived sugars, 124
  - 5.3.3 Optimization of strains and metabolism, 126
- 5.4 Bioprocess considerations, 127
- 5.5 Sugarcane-derived chemical products, 130
- 5.6 Summary, 132
- References, 133

  

- 6 Mathematical modeling of xylose production from hydrolysis of sugarcane bagasse, 137
  - Ava Greenwood, Troy Farrell and Ian M. O'Hara*
- 6.1 Introduction, 137
- 6.2 Mathematical models of hemicellulose acid pretreatment, 139
  - 6.2.1 Kinetic models of hemicellulose acid hydrolysis, 139
  - 6.2.2 The Saeman kinetic model, 139
  - 6.2.3 The biphasic model, 140
  - 6.2.4 The polymer degradation equation, 143
  - 6.2.5 Other mathematical considerations and models of hemicellulose acid hydrolysis, 146
- 6.3 A mathematical model of sugarcane bagasse dilute-acid hydrolysis, 150
- 6.4 Sensitivity analysis, 153
  - 6.4.1 Experimental solids loadings and fitting the hard-to-hydrolyze parameter, 155
  - 6.4.2 Hemicellulose chain length characteristics and the parameter fitting of  $k_a$  and  $k_b$ , 156
- 6.5 Conclusions, 159
- References, 160

  

- 7 Hydrothermal liquefaction of lignin, 165
  - Kameron G. Dunn and Philip A. Hobson*
- 7.1 Introduction, 165
- 7.2 A review of lignin alkaline hydrolysis research, 170
- 7.3 Hydrolysis in subcritical and supercritical water without an alkali base, 186
- 7.4 Solvolysis with hydrogen donor solvent formic acid, 188
- 7.5 Reported depolymerization pathways of lignin and lignin model compounds, 192
- 7.6 The solid residue product, 194

---

- 7.7 Summary – strategies to increase yields of monophenols, 195
  - 7.7.1 Reaction temperature, 200
  - 7.7.2 Reaction pressure, 201
  - 7.7.3 Reaction time, 201
  - 7.7.4 Lignin loading, 202
  - 7.7.5 Alkali molarity, 202
  - 7.7.6 Monomer separation, 202
  - 7.7.7 Lignin structure, 202
- References, 203

  

- 8 Conversion of sugarcane carbohydrates into platform chemicals, 207**  
*Darryn W. Rackemann, Zhanying Zhang and William O.S. Doherty*
  - 8.1 Introduction, 207
    - 8.1.1 Bagasse, 208
    - 8.1.2 Biorefining, 208
  - 8.2 Platform chemicals, 210
    - 8.2.1 Furans, 212
    - 8.2.2 Furfural, 212
    - 8.2.3 HMF, 214
  - 8.3 Organic acids, 214
    - 8.3.1 Levulinic acid, 214
    - 8.3.2 Formic acid, 218
  - 8.4 Value of potential hydrolysis products, 218
  - 8.5 Current technology for manufacture of furans and levulinic acid, 220
  - 8.6 Technology improvements, 222
  - 8.7 Catalysts, 223
    - 8.7.1 Homogeneous catalysts, 223
    - 8.7.2 Heterogeneous catalysts, 224
    - 8.7.3 Levulinic acid, 224
  - 8.8 Solvolysis, 226
  - 8.9 Other product chemicals, 228
    - 8.9.1 Esters, 228
    - 8.9.2 Ketals, 228
    - 8.9.3 Chloromethylfurfural, 229
    - 8.9.4 GVL, 229
  - 8.10 Concluding remarks, 230
  - References, 231
  
- 9 Cogeneration of sugarcane bagasse for renewable energy production, 237**  
*Anthony P. Mann*
  - 9.1 Introduction, 237
  - 9.2 Background, 238
  - 9.3 Sugar factory processes without large-scale cogeneration, 243

- 9.4 Sugar factory processes with large-scale cogeneration, 249
  - 9.4.1 Reducing LP steam heating requirements, 249
  - 9.4.2 Reducing boiler station losses, 251
  - 9.4.3 Increasing power generation efficiency, 253
  - 9.4.4 A sugar factory cogeneration steam cycle, 254
- 9.5 Conclusions, 256
- References, 257

**10** Pulp and paper production from sugarcane bagasse, 259

*Thomas J. Rainey and Geoff Covey*

- 10.1 Background, 259
- 10.2 History of bagasse in the pulp and paper industry, 260
- 10.3 Depithing, 260
  - 10.3.1 The need for depithing, 260
  - 10.3.2 Depithing operation, 262
  - 10.3.3 Character of pith, depithed bagasse, and whole bagasse, 264
  - 10.3.4 Combustion of pith, 264
- 10.4 Storage of bagasse for papermaking, 266
- 10.5 Chemical pulping and bleaching of bagasse, 268
  - 10.5.1 Digestion, 268
  - 10.5.2 Black liquor, 269
  - 10.5.3 Bleaching, 270
- 10.6 Mechanical and chemi-mechanical pulping, 271
- 10.7 Papermaking, 272
  - 10.7.1 Fiber morphology, 272
  - 10.7.2 Suitability of bagasse for various paper grades, 273
  - 10.7.3 Physical properties, 274
  - 10.7.4 Effect of pith on paper production, 275
- 10.8 Alternate uses of bagasse pulp, 276
- References, 277

**11** Sugarcane-derived animal feed, 281

*Mark D. Harrison*

- 11.1 Introduction, 281
  - 11.1.1 The anatomy of the sugarcane plant, 282
  - 11.1.2 Sugarcane production, processing, and sugar refining, 282
  - 11.1.3 Scope of the chapter, 284
- 11.2 Crop residues and processing products, 285
  - 11.2.1 Whole sugarcane, 285
  - 11.2.2 Tops and trash, 286
  - 11.2.3 Bagasse, 288
  - 11.2.4 Molasses, 288
  - 11.2.5 Sugarcane juice, 290

---

- 11.3 Processing sugarcane residues to enhance their value in animal feed, 290
  - 11.3.1 Ensilage/microbial conditioning, 291
  - 11.3.2 Chemical conditioning, 293
  - 11.3.3 Physical processing (baling, pelletization, depithing), 296
  - 11.3.4 Pretreatment, 296
- 11.4 Conclusions, 300
- References, 300

## **Part III Systems and sustainability**

- 12** Integrated first- and second-generation processes for bioethanol production from sugarcane, 313  
*Marina O. de Souza Dias, Otávio Cavalett, Rubens M. Filho and Antonio Bonomi*
  - 12.1 Introduction, 313
  - 12.2 Process descriptions, 315
    - 12.2.1 First-generation ethanol production, 315
    - 12.2.2 Second-generation ethanol production, 317
    - 12.2.3 Cogeneration in integrated first- and second-generation ethanol production from sugarcane, 320
    - 12.2.4 Some aspects of the process integration, 321
  - 12.3 Economic aspects of first- and second-generation ethanol production, 323
  - 12.4 Environmental aspects of first- and second-generation ethanol production, 325
  - 12.5 Final remarks, 328
  - References, 328
- 13** Greenhouse gas abatement from sugarcane bioenergy, biofuels, and biomaterials, 333  
*Marguerite A. Renouf*
  - 13.1 Introduction, 333
  - 13.2 Life cycle assessment (LCA) of sugarcane systems, 335
    - 13.2.1 Overview of LCA and carbon footprinting, 335
    - 13.2.2 Past LCA and carbon footprint studies of sugarcane bioproducts, 337
  - 13.3 Greenhouse gas/carbon footprint profile of sugarcane bioproducts, 339
    - 13.3.1 Land use change, 339
    - 13.3.2 Sugarcane production, 340
    - 13.3.3 Sugarcane biorefining, 342
    - 13.3.4 Downstream phases, 343
  - 13.4 Greenhouse gas (GHG) abatement from sugarcane products, 343
    - 13.4.1 Comparing sugarcane products with fossil fuel products, 343

- 13.4.2 Influence of land-use change, 344
- 13.4.3 Comparing sugarcane with other biomass feedstock, 345
- 13.4.4 Attributes for GHG abatement, 348
- 13.5 Environmental trade-offs, 349
  - 13.5.1 Land use and associated environmental services, 349
  - 13.5.2 Water use, 350
  - 13.5.3 Water quality, 350
  - 13.5.4 Phosphorus depletion, 351
  - 13.5.5 Balancing the GHG abatement benefits with the environmental trade-offs, 351
- 13.6 Production pathways that optimize GHG abatement, 352
  - 13.6.1 Production basis (dedicated vs. coproduction), 352
  - 13.6.2 Product outputs, 352
  - 13.6.3 Land used, 354
- 13.7 Opportunities for further optimizing GHG abatement, 354
  - 13.7.1 Ecoefficient sugarcane growing, 354
  - 13.7.2 Utilization of harvest residues, 355
  - 13.7.3 New sugarcane varieties, 355
- 13.8 Summary, 355
- References, 356

  

- 14 Environmental sustainability assessment of sugarcane bioenergy, 363**  
*Shabbir H. Gheewala, Sébastien Bonnet and Thapat Silalertruksa*
  - 14.1 Bioenergy and the sustainability challenge, 363
  - 14.2 Prospect of sugarcane bioenergy, 364
  - 14.3 Environmental sustainability assessment tools, 365
  - 14.4 Environmental sustainability assessment of sugarcane bioenergy: Case of Thailand, 366
    - 14.4.1 Background and policy context, 366
    - 14.4.2 Sugarcane farming and production system, 366
    - 14.4.3 Sugarcane farming and harvesting, 367
    - 14.4.4 Sugarcane milling, 367
    - 14.4.5 Ethanol conversion, 368
    - 14.4.6 Transport, 368
  - 14.5 Net energy balance and net energy ratio, 369
  - 14.6 Life cycle environmental impacts, 369
  - 14.7 Key environmental considerations for promoting sugarcane bioenergy, 372
- References, 376

  

- Index, 379

- 13.4.2 Influence of land-use change, 344
- 13.4.3 Comparing sugarcane with other biomass feedstock, 345
- 13.4.4 Attributes for GHG abatement, 348
- 13.5 Environmental trade-offs, 349
  - 13.5.1 Land use and associated environmental services, 349
  - 13.5.2 Water use, 350
  - 13.5.3 Water quality, 350
  - 13.5.4 Phosphorus depletion, 351
  - 13.5.5 Balancing the GHG abatement benefits with the environmental trade-offs, 351
- 13.6 Production pathways that optimize GHG abatement, 352
  - 13.6.1 Production basis (dedicated vs. coproduction), 352
  - 13.6.2 Product outputs, 352
  - 13.6.3 Land used, 354
- 13.7 Opportunities for further optimizing GHG abatement, 354
  - 13.7.1 Ecoefficient sugarcane growing, 354
  - 13.7.2 Utilization of harvest residues, 355
  - 13.7.3 New sugarcane varieties, 355
- 13.8 Summary, 355
- References, 356

  

- 14 Environmental sustainability assessment of sugarcane bioenergy, 363**  
*Shabbir H. Gheewala, Sébastien Bonnet and Thapat Silalertruksa*
  - 14.1 Bioenergy and the sustainability challenge, 363
  - 14.2 Prospect of sugarcane bioenergy, 364
  - 14.3 Environmental sustainability assessment tools, 365
  - 14.4 Environmental sustainability assessment of sugarcane bioenergy: Case of Thailand, 366
    - 14.4.1 Background and policy context, 366
    - 14.4.2 Sugarcane farming and production system, 366
    - 14.4.3 Sugarcane farming and harvesting, 367
    - 14.4.4 Sugarcane milling, 367
    - 14.4.5 Ethanol conversion, 368
    - 14.4.6 Transport, 368
  - 14.5 Net energy balance and net energy ratio, 369
  - 14.6 Life cycle environmental impacts, 369
  - 14.7 Key environmental considerations for promoting sugarcane bioenergy, 372
- References, 376

  

- Index, 379
