List of contributors	xi
Editors' biographies	xiii
Acknowledgment	xv
 Part One Introduction	 1
1 Introduction to concentrating solar thermal (CST) technologies	3
<i>M.J. Blanco, S. Miller</i>	
1.1 The sun as an energy source	3
1.2 Defining characteristics of CST technologies	4
1.3 Thermal efficiency and the need for concentration	5
1.4 Limits of concentration	6
1.5 Optimum operating temperature to maximize light-to-work conversion efficiency	8
1.6 Main commercially available solar concentrating technologies	9
1.7 Industry and market trends	14
1.8 Research priorities, strategies, and trends	22
References	25
 Part Two Advances in the collection and concentration of sunlight	 27
2 Advanced mirror concepts for concentrating solar thermal systems	29
<i>A. Fernández-García, F. Sutter, L. Martínez-Arcos, L. Valenzuela, C. Sansom</i>	
Nomenclature	29
2.1 Introduction	30
2.2 Anti-soiling coatings	31
2.3 High-reflective mirror materials	34
2.4 High-temperature mirrors for secondary concentrators	36
2.5 Low-cost mirrors based on stainless steel	40
2.6 Conclusions	40
References	42

3	Improved design for linear Fresnel reflector systems	45
	<i>M. Collares-Pereira, D. Canavarro, J. Chaves</i>	
3.1	Introduction (motivation)	45
3.2	Advanced linear Fresnel reflector concentrators	48
3.3	Conclusion	54
	References	55
Part Three	Advances in the thermal conversion of concentrated sunlight	57
4	A new generation of absorber tubes for concentrating solar thermal (CST) systems	59
	<i>A. Morales, G. San Vicente</i>	
4.1	Introduction	59
4.2	Glass cover	60
4.3	Steel tube	63
4.4	Vacuum maintenance	65
4.5	Bellows	68
4.6	Conclusion	70
	References	71
5	Innovative working fluids for parabolic trough collectors	75
	<i>E. Zarza Moya</i>	
5.1	Introduction	75
5.2	Direct steam generation	77
5.3	Molten salts	87
5.4	Compressed gases	94
5.5	Conclusions	101
	References	103
6	A new generation of solid particle and other high-performance receiver designs for concentrating solar thermal (CST) central tower systems	107
	<i>C.K. Ho</i>	
6.1	Introduction	107
6.2	Particle receivers	108
6.3	Other high-performance receiver designs	117
6.4	Summary and conclusions	122
	Acknowledgments	123
	References	123

7	Next generation of liquid metal and other high-performance receiver designs for concentrating solar thermal (CST) central tower systems	129
	<i>M. Romero, J. González-Aguilar</i>	
7.1	Introduction	129
7.2	Thermophysical properties of liquid metals	133
7.3	Liquid metals in central receiver systems	139
7.4	Innovative power conversion cycles with liquid metals as heat transfer fluid	147
7.5	Conclusions and outlook	151
	References	152
	Part Four Advances in the power block and thermal storage systems	155
8	Supercritical CO₂ and other advanced power cycles for concentrating solar thermal (CST) systems	157
	<i>S.M. Besarati, D.Y. Goswami</i>	
8.1	Introduction	157
8.2	Stand-alone cycles	158
8.3	Combined cycles	169
8.4	Summary and conclusions	175
	References	176
9	Advances in dry cooling for concentrating solar thermal (CST) power plants	179
	<i>K. Hooman, Z. Guan, H. Gurgenci</i>	
9.1	Introduction	179
9.2	Current cooling technologies for concentrating solar thermal power plants	180
9.3	Air-cooled heat exchanger and cooling tower sizing	184
9.4	Advances in dry cooling technologies for concentrating solar thermal power plants	191
9.5	Conclusions	211
	References	211
10	High-temperature latent heat storage for concentrating solar thermal (CST) systems	213
	<i>K. Nithyanandam, J. Stekli, R. Pitchumani</i>	
10.1	General introduction	213
10.2	Introduction to latent heat storage	214
10.3	General challenges for concentrating solar thermal latent heat storage systems	216

10.4	Latent heat storage configurations for concentrating solar thermal applications	227
10.5	Summary	242
	References	243
11	Thermochemical energy storage for concentrating solar thermal (CST) systems	247
	<i>L. Irwin, J. Stekli, C. Pfefferkorn, R. Pitchumani</i>	
11.1	Introduction to thermochemical energy storage	247
11.2	General challenges for CST thermochemical storage systems	252
11.3	Power plant and chemical plant	256
11.4	Le Châtelier's principle and thermochemical energy storage	260
11.5	Conclusions	265
	References	266
12	Thermal energy storage concepts for direct steam generation (DSG) solar plants	269
	<i>L. Valenzuela</i>	
	Nomenclature	269
12.1	Introduction	270
12.2	Overview on direct steam generation solar plants	270
12.3	Basic considerations on thermal energy storage	272
12.4	Integration of thermal energy storage systems in direct steam generation solar plants	277
12.5	Conclusions	287
	References	287
Part Five	Advances in the control an operation of CPS plants	291
13	Forecasting and nowcasting of DNI for concentrating solar thermal systems	293
	<i>L. Ramírez, J.M. Vindel</i>	
13.1	Introduction	293
13.2	Main forecasting techniques	295
13.3	Forecasting systems for CST power plants	304
13.4	Solar radiation forecasting baseline	305
13.5	DNI and CST power plants forecasting: main challenges	305
13.6	Conclusions	306
	References	307

14	Advanced control strategies to maximize ROI and the value of the concentrating solar thermal (CST) plant to the grid	311
	<i>E.F. Camacho, A.J. Gallego</i>	
14.1	Introduction	311
14.2	Optimal operation in solar trough plants	312
14.3	Optimization of flux distribution in solar tower plants	322
14.4	Conclusions and future works	333
	References	334
Part Six	Cost competitive CST plants concepts	337
15	Linear Fresnel reflector (LFR) plants using superheated steam, molten salts, and other heat transfer fluids	339
	<i>M. Collares-Pereira, D. Canavarro, L.L. Guerreiro</i>	
15.1	Introduction (motivation)	339
15.2	Heat transfer fluids	339
15.3	Higher temperatures: molten salts as HTF and thermal energy storage medium	342
15.4	Advanced LFR and molten salts: a new concept plant	344
15.5	Yearly performance	344
15.6	Discussion	348
15.7	Conclusions	351
	References	351
16	Central tower systems using the Brayton cycle	353
	<i>R. Buck, S. Giuliano, R. Uhlig</i>	
16.1	Introduction and history	353
16.2	Solarization of gas turbines	357
16.3	Solar gas turbine cycle concepts	360
16.4	System components	365
16.5	System studies	377
16.6	Conclusions	378
	Abbreviations	379
	References	379
17	Solar power towers using supercritical CO₂ and supercritical steam cycles, and decoupled combined cycles	383
	<i>M.A. Silva-Pérez</i>	
17.1	Introduction	383
17.2	Solar power towers with supercritical cycles	384

17.3	Decoupled solar combined cycles	393
17.4	Summary and conclusions	399
	References	400
18	Solar thermal processing	403
	<i>R. Bader, W. Lipiński</i>	
18.1	Introduction	403
18.2	H ₂ /CO production	405
18.3	Material processing and chemical commodity production	427
18.4	Other thermal processes	442
18.5	Other solar processes	445
18.6	Conclusions and future trends	445
	References	447
	Index	461
