

Contents

1	Introduction	1
1.1	Solid Oxide Fuel Cells	1
1.1.1	Cell Materials	2
1.1.2	Cell Designs	3
1.2	Toward Industrial Deployment of Reliable SOFC Systems	4
1.3	Benefits of Model-Based Approach for Control and Diagnostics	7
1.4	Literature Survey	11
1.4.1	1D Models	12
1.4.2	0D Models	13
1.4.3	Black-Box (Data-Driven) Models	16
1.4.4	Models for Diagnosis and Degradation Monitoring	17
1.5	Chapter Closure	20
	References	21
2	Models Hierarchy	27
2.1	From Physical to Synthesis Models	27
2.1.1	Hierarchical Approach to SOFC Modeling	29
2.2	Dimensional Modeling	31
2.2.1	The 1D Model	31
2.3	Lumped (Gray-Box) Modeling	60
2.3.1	Lumped Model of Planar SOFC	61
2.3.2	PostBurner Modeling	70
2.3.3	Heat Exchangers Modeling	73
2.4	Black-Box Modeling	78
2.4.1	Overview on Neural Network Models	78
2.4.2	Development of Neural Networks for Steady-State Modeling of SOFC Performance	80
2.4.3	Development of Neural Networks for Dynamic Modeling of SOFC Performance	82

2.5	Required Experimental Activity	83
2.5.1	Definition of Steady-State Identification Domain	84
2.5.2	Transient Experiments	85
2.6	Chapter Closure.	86
	References	87
3	Models for Control Applications.	91
3.1	Multilevel Control of SOFC Systems	91
3.1.1	Control Variables and Controlled Outputs.	94
3.1.2	Which Controllers?	96
3.2	Supervisory Control.	98
3.3	Central-Level Control.	100
3.4	Low-Level Control	102
3.4.1	Warmed-up Phase	104
3.4.2	Cold-Start Phase	107
3.5	Case Studies	111
3.5.1	Case Study 1: Automotive APU	111
3.5.2	Case Study 2: Residential CHP.	115
3.6	Chapter Closure.	118
	References	118
4	Models for Diagnostic Applications.	121
4.1	Model-Based Diagnosis	121
4.2	Residual Generation.	123
4.3	Threshold Design.	125
4.4	Inferential Process	128
4.4.1	Fault Tree Analysis	130
4.4.2	Fault Signature Matrix	132
4.5	Case Studies	134
4.5.1	Case Study 1: Air Blower Fault	136
4.5.2	Case Study 2: Fuel Pre-reformer Fault	145
4.6	Chapter Closure.	152
	References	153
