

Contents

List of contributors	vii
Preface	ix
Units of measurement of genome size	x
1. Introduction: the evolutionary significance of genome size	1
<i>T. Cavalier-Smith</i>	
2. The evolution of bacterial genomes	37
<i>M. Herdman</i>	
3. Eukaryotic gene numbers, non-coding DNA, and genome size	69
<i>T. Cavalier-Smith</i>	
4. Cell volume and the evolution of eukaryote genome size	105
<i>T. Cavalier-Smith</i>	
5. The genetic control of cell volume	185
<i>P. Nurse</i>	
6. Experimentally induced changes in genome size	197
<i>C. A. Cullis</i>	
7. DNA replication and the evolution of genome size	211
<i>T. Cavalier-Smith</i>	
8. Selfish DNA, intragenomic selection, and genome size	253
<i>T. Cavalier-Smith</i>	
9. Genome size and natural selection: observations and experiments in plants	267
<i>K. Bachmann, K. L. Chambers and H. J. Price</i>	
10. Basis of diversity in mitochondrial DNAs	277
<i>G. D. Clark-Walker</i>	
11. Evolution of plastid DNA	299
<i>N. Gillham, J. E. Boynton and E. H. Harris</i>	

12. Molecular mechanisms of duplication, deletion and transposition	353
<i>P. Dyson and D. Sherratt</i>	
13. Are B-chromosomes selfish?	397
<i>R. N. Jones</i>	
14. Chromatin diminution and chromosome elimination: mechanisms and adaptive significance	427
<i>D. Ammermann</i>	
15. Middle repetitive DNAs	443
<i>W. F. Doolittle</i>	
16. Recombination, genome size and chromosome number	489
<i>B. Charlesworth</i>	
Index	515
