Preface to the First Edition.....	xiii
Preface to the Second Edition.....	xvii
Preface to the Third Edition	xix
Preface to This Edition	xxi
Author.....	xxiii
1. Introduction	1
1.1 Basic Concepts	1
1.2 Constituent Materials for Composites	5
1.2.1 Reinforcement Materials including Nanoreinforcements	10
1.2.2 Matrix and Filler Materials.....	12
1.3 Structural Applications of Composites.....	18
1.4 Multifunctional Applications of Composites.....	28
1.5 Fabrication Processes.....	31
1.6 Elements of Mechanical Behavior of Composites	42
1.7 Review of Basic Mechanics of Materials Equations.....	44
References	55
2. Lamina Stress–Strain Relationships	57
2.1 Introduction	57
2.2 Effective Moduli in Stress–Strain Relationships	58
2.3 Symmetry in Stress–Strain Relationships.....	62
2.4 Orthotropic and Isotropic Engineering Constants	69
2.5 Specially Orthotropic Lamina.....	73
2.6 Generally Orthotropic Lamina	78
References	94
3. Effective Moduli of a Continuous Fiber-Reinforced Lamina	95
3.1 Introduction	95
3.2 Elementary Mechanics of Materials Models.....	104
3.2.1 Longitudinal Modulus.....	106
3.2.2 Transverse Modulus	110
3.2.3 Shear Modulus and Poisson’s Ratio	112
3.3 Improved Mechanics of Materials Models.....	120
3.4 Elasticity Models	124
3.4.1 Finite Difference Models.....	126
3.4.2 Finite Element Models.....	129

3.4.3	Closed-Form and Variational Models	133
3.5	Semiempirical Models	134
	References	140
4.	Strength of a Continuous Fiber-Reinforced Lamina	143
4.1	Introduction	143
4.2	Multiaxial Strength Criteria	146
4.2.1	Maximum Stress Criterion	147
4.2.2	Maximum Strain Criterion	151
4.2.3	Quadratic Interaction Criteria	153
4.3	Micromechanics Models for Lamina Strength	167
4.3.1	Longitudinal Strength	168
4.3.2	Transverse Strength	176
4.3.3	In-Plane Shear Strength	180
4.3.4	Multiaxial Strength	181
	References	186
5.	Analysis of Lamina Hygrothermal Behavior	191
5.1	Introduction	191
5.2	Hygrothermal Degradation of Properties	193
5.3	Lamina Stress-Strain Relationships including Hygrothermal Effects	208
5.4	Micromechanics Models for Hygrothermal Properties	217
	References	228
6.	Analysis of a Discontinuously Reinforced Lamina	231
6.1	Introduction	231
6.2	Aligned Discontinuous Fibers	232
6.2.1	Stress and Strength Analysis	233
6.2.2	Modulus Analysis	239
6.3	Off-Axis-Aligned Discontinuous Fibers	249
6.3.1	Stress and Strength Analysis	249
6.3.2	Modulus Analysis	251
6.4	Randomly Oriented Discontinuous Fibers	260
6.4.1	Stress and Strength Analysis	261
6.4.2	Modulus Analysis	262
6.5	Nanofibers and Nanotubes	271
6.5.1	Stress and Strength Analysis	274
6.5.2	Modulus Analysis	275
6.6	Particulates	279
6.6.1	Stress and Strength Analysis	280
6.6.2	Modulus Analysis	282
6.7	Hybrid Multiscale Reinforcements	284
	References	294

7. Analysis of Laminates	299
7.1 Introduction	299
7.2 Theory of Laminated Beams	300
7.2.1 Flexural Stresses and Deflections	300
7.2.2 Shear Stresses and Deflections	305
7.3 Theory of Laminated Plates with Coupling	317
7.4 Stiffness Characteristics of Selected Laminate Configurations	324
7.4.1 Specially Orthotropic Laminates	325
7.4.2 Generally Orthotropic Laminates	325
7.4.3 Symmetric Laminates	326
7.4.4 Antisymmetric Laminates	327
7.4.5 Quasi-Isotropic Laminates	327
7.5 Derivation and Use of Laminate Compliances	335
7.5.1 Inversion of Laminate Force-Deformation Equations	335
7.5.2 Determination of Lamina Stresses and Strains	337
7.5.3 Determination of Laminate Engineering Constants	338
7.5.4 Comparison of Measured and Predicted Compliances	341
7.6 Hygrothermal Effects in Laminates	350
7.6.1 Hygrothermal Degradation of Laminates	350
7.6.2 Hygrothermal Stresses in Laminates	350
7.6.3 Laminate Hygrothermal Expansion Coefficients	353
7.7 Interlaminar Stresses	354
7.8 Laminate Strength Analysis	360
7.8.1 First Ply Failure and Subsequent Ply Failures Due to In-Plane Stresses	360
7.8.2 Delamination Due to Interlaminar Stresses	363
7.9 Deflection and Buckling of Laminates	383
7.9.1 Analysis of Small Transverse Deflections	384
7.9.2 Buckling Analysis	390
7.10 Selection of Laminate Designs	394
7.11 Application of Laminate Analysis to Composite Structures	401
7.11.1 Composite Sandwich Structures	401
7.11.2 Composite Grid Structures	404
References	417
8. Analysis of Viscoelastic and Dynamic Behavior	421
8.1 Introduction	421
8.2 Linear Viscoelastic Behavior of Composites	425
8.2.1 Boltzmann Superposition Integrals for Creep and Relaxation	428
8.2.2 Differential Equations and Spring-Dashpot Models	432
8.2.3 Quasielastic Analysis	442

8.2.4	Sinusoidal Oscillations and Complex Modulus Notation.....	445
8.2.5	Elastic-Viscoelastic Correspondence Principle	449
8.2.6	Temperature and Aging Effects.....	455
8.3	Dynamic Behavior of Composites	474
8.3.1	Longitudinal Wave Propagation and Vibrations in Specially Orthotropic Composite Bars.....	475
8.3.2	Flexural Vibration of Composite Beams.....	481
8.3.3	Transverse Vibration of Laminated Plates	485
8.3.4	Analysis of Damping in Composites	492
8.4	Nanoenhancement of Viscoelastic and Dynamic Properties.....	502
	References	514
9.	Analysis of Fracture	519
9.1	Introduction	519
9.2	Fracture Mechanics Analyses of Through-Thickness Cracks.....	519
9.2.1	Stress Intensity Factor Approach.....	522
9.2.2	Strain Energy Release Rate Approach	526
9.2.3	Virtual Crack Closure Technique	530
9.3	Stress Fracture Criteria for Through-Thickness Notches.....	536
9.4	Interlaminar Fracture	543
9.5	Nanoenhancement of Fracture Toughness	555
	References	562
10.	Mechanical Testing of Composites and Their Constituents	569
10.1	Introduction	569
10.2	Measurement of Constituent Material Properties.....	570
10.2.1	Fiber Tests	570
10.2.2	Neat Resin Matrix Tests	573
10.2.3	Constituent Volume Fraction Measurement	576
10.3	Measurement of Basic Composite Properties	578
10.3.1	Tensile Tests	578
10.3.2	Compressive Tests.....	582
10.3.3	Shear Tests.....	585
10.3.4	Flexure Tests	594
10.3.5	Interlaminar Fracture Tests	595
10.3.6	Fiber/Matrix Interface Tests	599
10.3.7	Open-Hole and Filled-Hole Tests	601
10.3.8	Bearing Tests.....	602
10.3.9	Pull-Through Tests.....	604
10.4	Measurement of Viscoelastic and Dynamic Properties	613
10.4.1	Creep Tests.....	613
10.4.2	Vibration Tests.....	617

10.5	Measurement of Hygrothermal Properties	624
10.5.1	Glass Transition Temperature Tests	625
10.5.2	Thermal Expansion Tests	625
10.5.3	Moisture Absorption Tests	626
	References	630
11.	Answers to Selected Problems	639
	Appendix A: Matrix Concepts and Operations	641
	Appendix B: Stress Equilibrium Equations	651
	Appendix C: Strain–Displacement Equations	655
	Index	657
