Content of Volume 1

1	Foreword	1
	References	6
2	Polymer Synthesis: An Industrial Perspective	7
	<i>Sebastian Koltzenburg</i>	
2.1	About this Chapter	7
2.2	Why?	8
2.3	Thesis: There Are No Limits to the Fantasy of a Synthetic Polymer Chemist	8
2.4	Antithesis: We May Be Able to Synthesize Millions of New Polymers –But Why Should We Do So?	11
2.5	Synthesis	13
2.5.1	Polymer Chemistry in Two Dimensions: Coatings	13
2.5.2	Polymer Chemistry Going Broad: Effects of Molar Mass Distribution	16
2.5.3	Polymer Chemistry Meets The Life Sciences: Polymeric Drug-Delivery Systems	19
2.6	Conclusions	22
	Acknowledgments	23
3	From Heterogeneous Ziegler–Natta to Homogeneous Single-Center Group 4 Organometallic Catalysts: A Primer on the Coordination Polymerization of Olefins	25
	<i>Lawrence R. Sita</i>	
3.1	Introduction	25
3.2	Chapter Prospectus	28
3.3	Fundamentals of Coordination Polymerization	30
3.3.1	Ziegler–Natta Catalysts	30
3.3.1.1	First-Generation ZN Catalysts	31
3.3.1.2	Second-Generation ZN Catalysts	31

3.3.1.3	Third-Generation ZN Catalysts	32
3.3.1.4	Fourth-Generation ZN Catalysts	33
3.3.1.5	Fifth-Generation ZN Catalysts	34
3.3.2	Cossee–Arlman Mechanism	34
3.3.3	Stereocontrol	35
3.3.4	Regiocontrol	39
3.3.5	Chain Termination	40
3.3.6	Molecular Weight Distributions and Branching	43
3.4	Homogeneous Single-Center Coordination Polymerization	44
3.4.1	Molecular Catalysts	44
3.4.2	Metallocenes	44
3.4.3	Stereocontrol	46
3.4.4	Stereochemical Microstructure Analysis	54
3.4.5	Cocatalysts	60
3.5	Conclusions	63
	Acknowledgments	63
	References	63
4	Cobalt-Mediated Radical Polymerization	67
	<i>Antoine Debuigne, Robert Jérôme, Christine Jérôme, and Christophe Detrembleur</i>	
4.1	Introduction	67
4.2	Mechanistic Considerations	67
4.3	Key Parameters of CMRP	69
4.3.1	The Cobalt Complex Structure	69
4.3.2	Polymerization Conditions	71
4.4	Macromolecular Engineering	73
4.5	Cobalt-Mediated Radical Coupling (CMRC)	75
4.6	Summary and Outlook	76
	Acknowledgments	77
	References	77
5	Anionic Polymerization: Recent Advances	81
	<i>Takashi Ishizone and Akira Hirao</i>	
5.1	Background	81
5.2	Living Anionic Polymerization of Various Monomers	84
5.2.1	Styrene Derivatives	84
5.2.2	1,3-Diene Monomers	87
5.2.3	2- and 4-Vinylpyridines	89
5.3	(Meth)acrylate Derivatives	90
5.4	Acrylamide Derivatives	94
5.5	Cyclic Monomers	96
5.6	Other Monomers	99
5.7	Reaction of Living Anionic Polymers with Electrophiles: Synthesis of Chain-Functionalized Polymers	101

5.8	Synthesis of Architectural Polymers via Living Anionic Polymerization	106
5.8.1	Block Copolymers	107
5.8.2	Graft Copolymers	111
5.8.3	Star-Branched Polymers	115
5.8.4	Complex Architectural Polymers	119
5.9	Anionic Polymerization: Practical Aspects	124
5.10	Concluding Remarks	124
	References	125
6	Alkyne Metathesis Polymerization (ADIMET) and Macrocyclization (ADIMAC)	135
	<i>Aaron D. Finke and Jeffrey S. Moore</i>	
6.1	Introduction	135
6.2	Catalyst Development	136
6.3	Poly(Phenylene Ethynylene)s via ADIMET	138
6.4	ADIMAC-Acyclic Diyne Metathesis Macrocyclization	143
6.5	Conclusions	149
	References	151
7	The Synthesis of Conjugated Polythiophenes by Kumada Cross-Coupling	155
	<i>Felix P. V. Koch and Martin Heeney</i>	
7.1	Introduction to Polythiophene	155
7.2	Kumada Cross-Coupling	157
7.3	Polythiophenes by Kumada Cross-Coupling	158
7.3.1	Initiation and Catalyst Transfer Propagation	165
7.3.2	Summary of Mechanistic Studies	172
7.3.3	Influence of the Catalyst on Regioregularity	174
7.3.4	Thiophene-Based Monomers	174
7.3.5	Non-Thiophene Monomers	184
7.3.6	End Group Modification	186
7.4	Copolymers	188
7.4.1	Random and Alternating Copolymers	188
7.4.2	Block Copolymers	190
7.5	Summary and Outlook	193
	References	194
8	“Absolute” Asymmetric Polymerization within Crystalline Architectures: Relevance to the Origin of Homochirality	199
	<i>Isabelle Weissbuch and Meir Lahav</i>	
8.1	Introduction	199
8.2	“Through-Space” Asymmetric Polymerization in Inclusion Complexes and Liquid Crystals	200

8.3	Isotactic Oligomers Generated within Monolayers at the Air–Water Interface	202
8.4	“Absolute” Asymmetric Polymerization in 3-D Crystals	207
8.4.1	The Planning and Materialization of an “Absolute” Asymmetric Synthesis of Polymers	207
8.4.2	Attempted Amplification of Homochirality	212
8.5	Generation of Isotactic Oligopeptides via Polymerization in Racemic Crystals	213
8.5.1	(<i>RS</i>)-PheNCA	214
8.5.2	(<i>RS</i>)-ValNCA and (<i>RS</i>)-LeuNCA	219
8.6	Isotactic Oligopeptides from the Polymerization of Racemic ValNCA or LeuNCA in Aqueous Solution	222
8.7	Racemic β -Sheets in the Polymerization of α -Amino-Acids in Aqueous Solutions: Homochiral Oligopeptides and Copeptides via the “Ehler–Orgel” Reaction	224
8.8	Isotactic Oligopeptides from Racemic Thioesters of <i>DL</i> -Leu and <i>DL</i> -Val	226
8.9	Conclusions	229
	References	232
9	Synthesis of Abiotic Foldamers	235
	<i>Anzar Khan</i>	
9.1	Introduction	235
9.2	Phenylene Ethynylene Foldamers	237
9.2.1	Backbone Folding: Design Principle	237
9.2.2	General Synthesis	237
9.2.3	Representative Examples	238
9.2.3.1	Oligo(meta-Phenylene Ethynylene)s (OmPEs)	238
9.2.4	Oligo(ortho-Phenylene Ethynylene)s (OoPEs)	240
9.3	Helical Aromatic Amides	241
9.3.1	Backbone Folding: Design Principle	241
9.3.2	General Synthesis	241
9.3.3	Representative Examples	241
9.3.3.1	Oligoaryl-Dicarboxamides	241
9.3.3.2	Oligoquinoline-Dicarboxamides	244
9.3.3.3	Oligoanthranilamides	245
9.3.3.4	Oligopyridine-Dicarboxamides	245
9.4	Helical Aromatic Ureas	245
9.4.1	Backbone Folding: Design Principle	245
9.4.2	General Synthesis	246
9.4.3	Representative Examples	248
9.4.3.1	Oligoheterocyclic Ureas	248
9.4.3.2	Oligoaryl Ureas	248
9.4.3.3	Oligobenzoyl Ureas	248

9.5	Helical Aromatic Hydrazides	248
9.5.1	Backbone Folding: Design Principle	248
9.5.2	Synthesis	248
9.6	Heterocyclic Foldamers	249
9.6.1	Backbone Folding: Design Principle	249
9.6.2	Representative Examples	251
9.6.2.1	Oligopyridine-Pyrimidines	251
9.6.2.2	Oligopyridine-Pyridazines	253
9.6.2.3	Oligonaphthyridine-Pyrimidines	253
9.6.2.4	1,4-Disubstituted-1,2,3-Triazoles	253
9.6.2.5	Oligoindoles	257
9.7	Conclusions	257
