

Table of Contents

1. Local Decompositions of Control Systems	1
1.1 Introduction	1
1.2 Notations	5
1.3 Distributions	13
1.4 Frobenius Theorem	22
1.5 The Differential Geometric Point of View	33
1.6 Invariant Distributions	41
1.7 Local Decompositions of Control Systems	49
1.8 Local Reachability	53
1.9 Local Observability	69
2. Global Decompositions of Control Systems	77
2.1 Sussmann's Theorem and Global Decompositions	77
2.2 The Control Lie Algebra	83
2.3 The Observation Space	87
2.4 Linear Systems and Bilinear Systems	91
2.5 Examples	99
3. Input-Output Maps and Realization Theory	105
3.1 Fliess Functional Expansions	105
3.2 Volterra Series Expansions	112
3.3 Output Invariance	116
3.4 Realization Theory	121
3.5 Uniqueness of Minimal Realizations	132
4. Elementary Theory of Nonlinear Feedback for Single-Input Single-Output Systems	137
4.1 Local Coordinates Transformations	137
4.2 Exact Linearization Via Feedback	147
4.3 The Zero Dynamics	162
4.4 Local Asymptotic Stabilization	172
4.5 Asymptotic Output Tracking	178
4.6 Disturbance Decoupling	184
4.7 High Gain Feedback	189

4.8	Additional Results on Exact Linearization	194
4.9	Observers with Linear Error Dynamics	203
4.10	Examples	211
5.	Elementary Theory of Nonlinear Feedback for Multi-Input Multi-Output Systems	219
5.1	Local Coordinates Transformations	219
5.2	Exact Linearization via Feedback	227
5.3	Noninteracting Control	241
5.4	Achieving Relative Degree via Dynamic Extension	249
5.5	Examples	263
5.6	Exact Linearization of the Input-Output Response	277
6.	Geometric Theory of State Feedback: Tools	293
6.1	The Zero Dynamics	293
6.2	Controlled Invariant Distributions	312
6.3	The Maximal Controlled Invariant Distribution in $\ker(dh)$...	317
6.4	Controllability Distributions	333
7.	Geometric Theory of Nonlinear Systems: Applications	339
7.1	Asymptotic Stabilization via State Feedback	339
7.2	Disturbance Decoupling	342
7.3	Noninteracting Control with Stability via Static Feedback ...	344
7.4	Noninteracting Control with Stability: Necessary Conditions .	364
7.5	Noninteracting Control with Stability: Sufficient Conditions..	373
8.	Tracking and Regulation	387
8.1	The Steady State Response in a Nonlinear System	387
8.2	The Problem of Output Regulation	391
8.3	Output Regulation in the Case of Full Information	396
8.4	Output Regulation in the Case of Error Feedback	403
8.5	Structurally Stable Regulation	416
9.	Global Feedback Design for Single-Input Single-Output Systems	427
9.1	Global Normal Forms	427
9.2	Examples of Global Asymptotic Stabilization	432
9.3	Examples of Semiglobal Stabilization	439
9.4	Artstein-Sontag's Theorem	448
9.5	Examples of Global Disturbance Attenuation	450
9.6	Semiglobal Stabilization by Output Feedback	460

A. Appendix A	471
A.1 Some Facts from Advanced Calculus	471
A.2 Some Elementary Notions of Topology	473
A.3 Smooth Manifolds	474
A.4 Submanifolds	479
A.5 Tangent Vectors	483
A.6 Vector Fields	493
B. Appendix B	503
B.1 Center Manifold Theory	503
B.2 Some Useful Properties	511
B.3 Local Geometric Theory of Singular Perturbations	517
Bibliographical Notes	529
References	535
Index	545
