<i>Preface</i>	v
1. Mixed Matrix Membranes for Gas Separation Applications	1
<i>Maria Carreon, Ganpat Dahe, Jie Feng and Surendar R Venna</i>	
1. Introduction	1
2. Fabrication and Characterization of MMMs	4
3. Polymer-filler Compatibility	6
3.1. Filler Size and Morphology	9
3.2. Modification of the Fillers and Casting Conditions	11
3.3. Flat Sheet and Hollow Fiber Configurations . .	15
4. Gas Separation Performance of MMM	17
5. Zeolite-based MMM	19
6. MOF-based MMM	21
7. Carbon-based MMM	24
8. Other Novel Materials	28
8.1. Comparison of MMM with Inorganic Membranes	31
9. Predictive Models for Gas Separation Performance	33

10. Permeation Models	34
10.1. Ideal MMMs	34
10.1.1. Non-ideal MMMs	37
10.2. Molecular Models	43
11. Conclusions and Outlook	44
References	46
 2. Ceramic-Supported Organic Composite Membranes for Gas Separation	 59
<i>Gongping Liu and Wanqin Jin</i>	
1. Ceramic-supported Polymeric Composite Membranes	60
2. Ceramic-supported GO Composite Membranes	66
2.1. Vacuum-filtration Method	67
2.2. Spray-evaporation Method	70
2.3. External Force-driven Assembly Method	74
2.4. Ceramic Hollow Fiber-supported GO Composite Membrane	80
2.5. Ceramic-supported GO Mixed Matrix Membranes	85
3. Conclusion and Outlook	91
Acknowledgments	92
References	92
 3. Molecular Modeling of MOF Membranes for Gas Separations	 97
<i>Ilknur Erucar and Seda Keskin</i>	
1. Introduction	97
2. Computational Methods	105
2.1. Molecular Simulations of Thin-film MOF Membranes	106
2.2. Computational Modeling of MOF-based MMMs	113
3. Assessment of MOF Membranes using Computational Approaches	116

3.1. Thin-film MOF Membranes	117
3.2. MOF-based MMMs	126
4. Outlook	132
References	134
4. Membrane Processes for N₂–CH₄ Separation	145
<i>Shiguang Li, Zhaowang Zong, Miao Yu</i> <i>and Moises A. Carreon</i>	
1. Natural Gas Generalities	146
2. Overview of Natural Gas N ₂ Rejection Technologies	148
2.1. Nitrotec Energy's PSA Process	149
2.2. Engelhard Molecular Gate	149
2.3. Mehra Process SM 's Solvent Process	150
2.4. Bend Research Process	151
2.5. Membrane Process	151
3. Nitrogen-Selective Membranes	154
4. SAPO-34 Zeolites	155
5. SAPO-34 Membranes for N ₂ –CH ₄ Separation	158
5.1. SAPO-34 Membranes Synthesis	159
5.1.1. Synthesis of SAPO-34 Seeds	159
5.1.2. Preparation of SAPO-34 Membranes	163
5.2. N ₂ –CH ₄ Separation Performance of SAPO-34 Membranes	168
5.3. Adsorption Isotherms and Heats of Adsorption	182
6. Conclusions	188
References	189
5. Polymer Blend Membranes for Gas Separations	195
<i>Charles J. Holt, Juan P. Vizuet, Inga H. Musselman,</i> <i>Kenneth J. Balkus Jr. and John P. Ferraris</i>	
1. Introduction	195
2. Morphology	208
2.1. Blends	210

2.2. Miscible Blends	211
2.3. Immiscible Blends	215
3. Morphology Control	218
3.1. Copolymers	218
3.2. Compatibilization	219
3.3. Immiscible Blends Compatibilized with Copolymers	219
3.4. Immiscible Blends Compatibilized with Nanoparticles and Small Molecules	221
4. Summary and Outlook	230
Acknowledgments	232
References	232
6. Manipulating Polyimide Nanostructures via Cross-linking for Membrane Gas Separation	243
<i>Lingxiang Zhu, Maryam Omidvar and Haiqing Lin</i>	
1. Introduction	243
2. Background on Membrane Gas Separation	245
3. Effect of Cross-linking on Polymer Physical Properties	247
4. Cross-linking of Polyimides for Membrane Gas Separation	251
4.1. Aromatic Polyimides for Gas Separation	251
4.2. Chemical Cross-Linking of Polyimides	254
5. Gas Separation Properties of Cross-linked Polyimides	256
5.1. H ₂ –CO ₂ Separation	257
5.2. CO ₂ –CH ₄ Separation	258
5.3. C ₃ H ₆ –C ₃ H ₈ Separation	259
5.4. Correlation of Gas Permeability and Cross-Linking Density	260
6. Concluding Remarks	263
6.1. Summary	263
6.2. Outlook	263
Acknowledgment and Disclaimer	264
References	264

7. Dense Inorganic Membranes for Hydrogen Separation 271

*Sean-Thomas B. Lundin, Neil S. Patki,
Thomas F. Fuerst, Sandrine Ricote, Colin A. Wolden
and J. Douglas Way*

1. Introduction	272
2. Types of Dense Membranes	278
2.1. Hydrogen Soluble Metal Membranes (Thermochemical Transport)	278
2.1.1. Palladium and Its Alloys	282
2.1.2. BCC-Catalyst Combinations	285
2.2. Proton-Conducting Ceramic Membranes (Electrochemical Transport)	294
2.2.1. Oxides Based on the Perovskite Structure	296
2.2.2. Protonic Defects, Doping, and Transport Mechanism	297
2.2.3. Cerates Versus Zirconates	299
2.2.4. $\text{BaZr}_x\text{Ce}_y\text{Y}_{1-x-y}\text{O}_{3-\delta}$ (BZCY) and Solid-state Reactive Sintering (SSRS) . .	301
2.2.5. Hydrogen Galvanic Flux and Its Measurement	302
3. Hydrogen Separation Applications	305
3.1. Dehydrogenation Membrane Reactors	306
3.1.1. Proton-conducting Ceramic Applications	308
3.1.2. Steam Methane Reforming	310
3.1.3. Ammonia Decomposition	316
3.2. Hydrogenation Membrane Reactors	320
3.2.1. Dense Metal Membrane Applications . .	321
3.2.2. Dense Ceramic Membrane Applications	328
3.3. Hydrogen Isotope Separations	335
4. Summary and Outlook	338
Acknowledgments	341
References	341
