

Contents

1. Introduction	
1.1 Preamble	1
1.2 Why Aerospace Composites?	3
1.3 What Are Aerospace Composites?	3
1.3.1 Definition of Aerospace Composites	3
1.3.2 High-Performance Fibers for Aerospace Composites Applications	4
1.3.3 High-Performance Matrices for Aerospace Composites Applications	5
1.3.4 Advantages of Composites in Aerospace Usage	5
1.3.5 Fabrication of Aerospace Composites	7
1.4 Evolution of Aerospace Composites	8
1.4.1 Early Advances	9
1.4.2 Composite Growth in the 1960s and 1970s	9
1.4.3 Composites Growth Since the 1980s	10
1.5 Today's Aerospace Composites	10
1.5.1 Boeing 787 Dreamliner	12
1.5.2 Airbus A350 XWB	14
1.6 Challenges for Aerospace Composites	15
1.6.1 Concerns about the Aerospace Use of Composites	16
1.6.2 The November 2001 Accident of AA Flight 587	16
1.6.3 Fatigue Behavior of Composite Materials	17
1.6.4 The Future of Composites in Aerospace	18
1.7 About This Book	20
References	22
2. Fundamentals of Aerospace Composite Materials	
2.1 Introduction	26
2.2 Anisotropic Elasticity	27
2.2.1 Basic Notations	28
2.2.2 Stresses—The Stress Tensor	28
2.2.3 Strain—Displacement Relations—The Strain Tensor	29
2.2.4 Stress—Strain Relations	29
2.2.5 Equation of Motion in Terms of Stresses	35
2.2.6 Equation of Motion in Terms of Displacements	35
2.3 Unidirectional Composite Properties	37
2.3.1 Elastic Constants of a Unidirectional Composite	37
2.3.2 Compliance Matrix of a Unidirectional Composite	38
2.3.3 Stiffness Matrix of a Unidirectional Composite	40
2.3.4 Estimation of Elastic Constants from the Constituent Properties	41
2.4 Plane-Stress 2D Elastic Properties of a Composite Layer	47
2.4.1 Plane-Stress 2D Compliance Matrix	47
2.4.2 Plane-Stress 2D Stiffness Matrix	48
2.4.3 Rotated 2D Stiffness Matrix	49
2.4.4 Rotated 2D Compliance Matrix	52
2.4.5 Proof of $\mathbf{RTR}^{-1} = \mathbf{T}^{-t}$	53
2.5 Fully 3D Elastic Properties of a Composite Layer	54
2.5.1 Orthotropic Stiffness Matrix	55
2.5.2 Rotated Stiffness Matrix	56
2.5.3 Equations of Motion for a Monoclinic Composite Layer	61
2.5.4 Rotated Compliance Matrix	62
2.5.5 Note on the Use of Closed-Form Expression in the \mathbf{C} and \mathbf{S} matrices	63
2.5.6 Proof of $\mathbf{RTR}^{-1} = \mathbf{T}^{-t}$ in 3D	63
2.6 Problems and Exercises	65
References	65
3. Vibration of Composite Structures	
3.1 Introduction	68
3.1.1 Displacements for Axial—Flexural Vibration of Composite Plates	68
3.1.2 Stress Resultants	69

- 3.2 Equations of Motion in Terms of Stress Resultants 70
 - 3.2.1 Derivation of Equations of Motion from Free Body Diagram 70
 - 3.2.2 Derivation of Axial–Flexural Equations from Stress Equations of Motion 71
 - 3.2.3 Summary of Equations of Motion in Terms of Stress Resultants 76
 - 3.2.4 Strains in Terms of Displacements 77
 - 3.2.5 Strains in Terms of Mid-Surface Strains and Curvatures 78
- 3.3 Vibration Equations for an Anisotropic Laminated Composite Plate 79
 - 3.3.1 Stress–Strain Relations for an Anisotropic Laminated Composite Plate 79
 - 3.3.2 Stresses in Terms of Mid-Surface Strains and Curvatures for an Anisotropic Laminated Composite Plate 80
 - 3.3.3 Stress Resultants in Terms of Mid-Surface Strains and Curvatures for an Anisotropic Laminated Composite Plate 80
 - 3.3.4 Equations of Motion in Terms of Displacements for an Anisotropic Laminated Composite Plate 83
 - 3.3.5 Vibration Frequencies and Modeshapes of an Anisotropic Laminated Composite Plate 85
- 3.4 Vibration Equations for an Isotropic Plate 86
 - 3.4.1 Isotropic Stress–Strain Relations 87
 - 3.4.2 Stresses in Terms of Mid-Surface Strains and Curvatures for an Isotropic Plate 87
 - 3.4.3 Stress Resultants for an Isotropic Plate 88
 - 3.4.4 Equations of Motion in Terms of Displacements for an Isotropic Plate 89
 - 3.4.5 Vibration Frequencies and Modeshapes of an Isotropic Plate 91
- 3.5 Special Cases 93
 - 3.5.1 Symmetric Laminates 93
 - 3.5.2 Isotropic Laminates 95
- 3.6 Problems and Exercises 95
 - References 95
4. Guided Waves in Thin-Wall Composite Structures
 - 4.1 Introduction 98
 - 4.1.1 Overview 98
 - 4.1.2 Problem Setup 99
 - 4.1.3 State of the Art in Modeling Guided-Wave Propagation in Laminated Composites 99
 - 4.1.4 Chapter Layout 101
 - 4.2 Wave Propagation in Bulk Composite Material—Christoffel Equations 101
 - 4.2.1 Equation of Motion in Terms of Displacements 102
 - 4.2.2 Christoffel Equation for Bulk Composites 103
 - 4.3 Guided Waves in a Composite Ply 104
 - 4.3.1 Guided Wave as a Superposition of Partial Waves 104
 - 4.3.2 Coherence Condition—Generalized Snell’s Law 105
 - 4.3.3 Christoffel Equation for a Lamina 106
 - 4.3.4 Stresses 109
 - 4.3.5 State Vector and Field Matrix 112
 - 4.3.6 Dispersion Curves 112
 - 4.4 Guided-Wave Propagation in a Laminated Composite 114
 - 4.4.1 Global Matrix Method (GMM) 115
 - 4.4.2 Transfer Matrix Method (TMM) 116
 - 4.4.3 Stiffness Matrix Method (SMM) 118
 - 4.5 Numerical Computation 122
 - 4.6 Problems and Exercises 122
 - References 122
5. Damage and Failure of Aerospace Composites
 - 5.1 Introduction 126
 - 5.2 Composites Damage and Failure Mechanisms 127
 - 5.2.1 Fiber and Matrix Stress–Strain Curves 127
 - 5.2.2 Failure Modes in Unidirectional Fiber-Reinforced Composites 129
 - 5.3 Tension Damage and Failure of a Unidirectional Composite Ply 132
 - 5.3.1 Strain-Controlled Tension Failure due to Fracture of the Fibers 132

- 5.3.2 Statistical Effects on Unidirectional Composite Strength and Failure 132
 - 5.3.3 Shear-Lag Load Sharing between Broken Fibers 133
 - 5.3.4 Fiber Pullout 135
 - 5.4 Tension Damage and Failure in a Cross-Ply Composite Laminate 136
 - 5.4.1 Ply Discount Method 136
 - 5.4.2 Progressive Failure of a Cross-Ply Laminate 136
 - 5.4.3 Interfacial Stresses at Laminate Edges and Cracks 139
 - 5.4.4 Effect of Matrix Cracking on Interlaminar Stresses 142
 - 5.5 Characteristic Damage State (CDS) 142
 - 5.5.1 Definition of the Characteristic Damage State 142
 - 5.5.2 Damage Modes That Modify Local Stress Distribution 145
 - 5.5.3 Stiffness Evolution with Damage Accumulation 146
 - 5.6 Fatigue Damage in Aerospace Composites 148
 - 5.6.1 Fatigue of Unidirectional Composites 148
 - 5.6.2 Fatigue of Cross-Ply Composite Laminate 150
 - 5.7 Long-Term Fatigue Behavior of Aerospace Composites 152
 - 5.7.1 Damage Region I—Progression toward Widespread CDS 152
 - 5.7.2 Damage Region II—Crack Coupling and Delamination 154
 - 5.7.3 Damage Region III—Damage Acceleration and Final Failure 157
 - 5.7.4 Summary of Long-Term Fatigue Behavior of Composites 159
 - 5.8 Compression Fatigue Damage and Failure in Aerospace Composites 159
 - 5.8.1 Compression Fatigue Delamination Damage 159
 - 5.8.2 Compression Fatigue Local Microbuckling Damage 160
 - 5.8.3 Compression Fatigue Damage under Combined Tension-Compression Loading 163
 - 5.9 Other Composite Damage Types 163
 - 5.9.1 Fastener Hole Damage in Composites 163
 - 5.9.2 Impact Damage in Composites 165
 - 5.9.3 Composite Sandwich Damage 166
 - 5.9.4 Damage in Adhesive Composite Joints 168
 - 5.10 Fabrication Defects versus In-service Damage 169
 - 5.10.1 Fabrication Defects 169
 - 5.10.2 In-service Damage 170
 - 5.11 What Could SHM Systems Aim to Detect? 171
 - 5.12 Summary and Conclusions 173
 - References 174
- ## 6. Piezoelectric Wafer Active Sensors
- 6.1 Introduction 179
 - 6.1.1 SMART Layer™ and SMART Suitcase™ 179
 - 6.1.2 Advantages of PWAS Transducers 183
 - 6.2 PWAS Construction and Operational Principles 183
 - 6.3 Coupling between the PWAS Transducer and the Monitored Structure 186
 - 6.3.1 1D Analysis of PWAS Coupling 187
 - 6.3.2 Shear-Layer Analysis for a Circular PWAS 194
 - 6.4 Tuning between PWAS Transducers and Structural Guided Waves 196
 - 6.4.1 Lamb-Wave Tuning with Linear PWAS Transducers 197
 - 6.4.2 Lamb-Wave Tuning with Circular PWAS 201
 - 6.5 Wave Propagation SHM with PWAS Transducers 204
 - 6.5.1 Pitch-Catch Guided-Wave Propagation SHM 205
 - 6.5.2 Pulse-Echo Guided-Wave Propagation SHM 205
 - 6.5.3 Impact and AE Wave Propagation SHM 210
 - 6.6 PWAS Phased Arrays and the Embedded Ultrasonics Structural Radar 212
 - 6.6.1 Phased-Array Processing Concepts 212
 - 6.6.2 Beamforming Formulae for 2D PWAS Phased Arrays 216
 - 6.6.3 Linear PWAS Phased Arrays 220
 - 6.6.4 Embedded Ultrasonics Structural Radar 225
 - 6.6.5 EUSR System Design and Experimental Validation 227

- 6.7 PWAS Resonators 230
 - 6.7.1 Linear PWAS Resonators 231
 - 6.7.2 Circular PWAS Resonators 234
 - 6.7.3 Constrained Linear PWAS Resonators 236
 - 6.7.4 Constrained Circular PWAS Resonators 237
- 6.8 High-Frequency Vibration SHM with PWAS Modal Sensors—The Electromechanical (E/M) Impedance Technique 238
 - 6.8.1 Linear PWAS Modal Sensors 239
 - 6.8.2 Circular PWAS Modal Sensors 242
 - 6.8.3 Damage Detection with PWAS Modal Sensors and the E/M Impedance Technique 246
- References 248

7. Fiber-Optic Sensors

- 7.1 Introduction 250
 - 7.1.1 Intensity Modulation Fiber-Optic Sensors 251
 - 7.1.2 Polarization Modulation Fiber-Optic Sensors 251
 - 7.1.3 Phase Modulation Fiber-Optic Sensors 251
 - 7.1.4 Spectral Modulation Fiber-Optic Sensors 252
 - 7.1.5 Scattering Modulation Fiber-Optic Sensors 253
- 7.2 General Principles of Fiber Optic Sensing 253
 - 7.2.1 Total Internal Reflection 253
 - 7.2.2 Single-Mode and Multimode Optical Fibers 254
- 7.3 Interferometric Fiber-Optic Sensors 256
 - 7.3.1 Mach—Zehnder and Michelson Interferometers 256
 - 7.3.2 Intrinsic Fabry—Perot Sensors 256
 - 7.3.3 Extrinsic Fabry—Perot Interferometric Sensors 256
 - 7.3.4 Transmission EFPI Fiber-Optic Sensors 259
 - 7.3.5 In-line Fiber Etalon Sensors 260
- 7.4 FBG Optical Sensors 260
 - 7.4.1 FBG Principles 261
 - 7.4.2 Fabrication of FBG Sensors 262

- 7.4.3 Conditioning Equipment for FBG Sensors 264
- 7.4.4 FBG Demodulators for Ultrasonic Frequencies 269
- 7.4.5 FBG Rosettes 281
- 7.4.6 Long-Gage FBG Sensors 281
- 7.4.7 Temperature Compensation in FBG Sensing 283
- 7.5 Intensity-Modulated Fiber-Optic Sensors 285
 - 7.5.1 Typical Intensity-Modulated Fiber-Optic Sensors 285
 - 7.5.2 Intensity-Based Optical Fiber Sensors 285
- 7.6 Distributed Optical Fiber Sensing 286
 - 7.6.1 Optical Time Domain Reflectometry 287
 - 7.6.2 Brillouin Optical Time Domain Reflectometry 288
 - 7.6.3 Continuous Fiber Sensing Using Rayleigh Backscatter 290
 - 7.6.4 Fiber-Optic Temperature Laser Radar 291
- 7.7 Triboluminescence Fiber-Optic Sensors 291
- 7.8 Polarimetric Optical Sensors 292
- 7.9 Summary and Conclusions 293
 - References 293

8. Other Sensors for SHM of Aerospace Composites

- 8.1 Introduction 298
- 8.2 Conventional Resistance Strain Gages 298
 - 8.2.1 Resistance Strain Gage Principles 298
 - 8.2.2 Strain Gage Instrumentation 299
 - 8.2.3 Aerospace Strain Gage Technology 302
 - 8.2.4 Strain Gage Usage in Aerospace Composites 302
- 8.3 Electrical Property Sensors 305
 - 8.3.1 Electrical Resistance and Electrical Potential Methods for Composites SHM 305
 - 8.3.2 Frequency Domain Methods for Electrical SHM of Aerospace Composites 311
- References 313

9. Impact and Acoustic Emission Monitoring for Aerospace Composites SHM

- 9.1 Introduction 318
- 9.2 Impact Monitoring—PSD 319
 - 9.2.1 PSD for Impact Location and Force Identification 319
 - 9.2.2 Triangulation Example 320
 - 9.2.3 Model-Based Impact Monitoring 323
 - 9.2.4 Data-Driven Impact Monitoring 326
 - 9.2.5 Directional Sensors Approach to Impact Detection 328
 - 9.2.6 AE Monitoring 330
 - 9.2.7 Simultaneous Monitoring of Impact and AE Events 331
- 9.3 Impact Damage Detection—ASD and Acousto-Ultrasonics 334
 - 9.3.1 ASD with Piezo Transmitters and Piezo Receivers 335
 - 9.3.2 ASD with Piezo Transmitters and Fiber-Optic Receivers 342
 - 9.3.3 Guided-Wave Tomography and Data-Driven ASD 345
 - 9.3.4 PWAS Pulse-Echo Crack Detection in Composite Beam 346
 - 9.3.5 Phased Arrays and Directional Transducers 347
- 9.4 Other Methods for Impact Damage Detection 352
 - 9.4.1 Direct Methods for Impact Damage Detection 352
 - 9.4.2 Strain-Mapping Methods for Damage Detection 357
 - 9.4.3 Vibration SHM of Composites 358
 - 9.4.4 Frequency Transfer Function SHM of Composites 361
 - 9.4.5 Local-Area Active Sensing with EMIS Method 363
- 9.5 Electrical and Electromagnetic Field Methods for Delamination Detection 365
 - 9.5.1 Delamination Detection with the Electrical Resistance Method 365
 - 9.5.2 Delamination Detection with the Electrical Potential Method 375
 - 9.5.3 Electromagnetic Damage Detection in Aerospace Composites 381

- 9.5.4 Hybrid Electromagnetic SHM of Aerospace Composites 381
- 9.5.5 Self-Sensing Electrical Resistance-Based Damage Detection and Localization 383
- 9.6 PSD and ASD of Sandwich Composite Structures 384
- 9.7 Summary and Conclusions 386
 - References 388

10. SHM of Fatigue Degradation and Other In-Service Damage of Aerospace Composites

- 10.1 Introduction 396
- 10.2 Monitoring of Strain, Acoustic Emission, and Operational Loads 397
 - 10.2.1 Strain Distribution Monitoring 401
 - 10.2.2 Composite Panel Buckling Monitoring 405
- 10.3 Acoustic Emission Monitoring 405
- 10.4 Simultaneous Monitoring of Strain and Acoustic Emission 407
- 10.5 Fatigue Damage Monitoring 409
 - 10.5.1 Fiber-Optic Monitoring of Transverse Cracks in Cross-ply Composites 409
 - 10.5.2 Pitch-Catch Guided-Wave Detection of Fatigue Microcracking and Delamination 410
 - 10.5.3 ECIS Monitoring of Composites Fatigue Damage 414
- 10.6 Monitoring of In-service Degradation and Fatigue with the Electrical Resistance Method 416
 - 10.6.1 Fundamentals of the Electrical Resistance Method 417
 - 10.6.2 Electrical Resistance SHM of CFRP Composites 418
 - 10.6.3 Electrical Resistance SHM of CNT Doped GFRP Composites 422
 - 10.6.4 Wireless Sensing Using the Electrical Resistance Method 423
- 10.7 Disbonds and Delamination Detection and Monitoring 425
 - 10.7.1 Disbond and Delamination Detection with Conventional Ultrasonics Guided Waves 425
 - 10.7.2 Monitoring of Composite Patch Repairs 425

- 10.7.3 Monitoring of Composite Adhesive Joints 426
- 10.7.4 Dielectrical SHM of Delamination and Water Seepage in GFRP Composites 428
- 10.8 Summary, Conclusions, and Suggestions for Further Work 430
- References 432

11. Summary and Conclusions

- 11.1 Overview 435
- 11.2 Composites Behavior and Response 436
- 11.3 Damage and Failure of Aerospace Composites 438
- 11.4 Sensors for SHM of Aerospace Composites 440
- 11.5 Monitoring of Impact Damage Initiation and Growth in Aerospace Composites 442
- 11.6 Monitoring of Fatigue Damage Initiation and Growth in Aerospace Composites 443
- 11.7 Summary and Conclusions 445
