

# Table of Contents

## Part 1. Spectroscopy Methods for Membrane Characterization

### Chapter 1. Fourier Transform Infrared (FTIR) Spectroscopy

- 1. Introduction
- 2. FTIR Principle and Analysis Process
- 3. Sample Preparation Methods
- 4. Techniques of Sample Handling
- 5. Membrane Surface Functionalization Monitoring by FTIR
- 6. Stability and Durability Monitoring in Various Membrane Application by FTIR
- 7. Conclusion

### Chapter 2. Raman Spectroscopy

- 1. Introduction
- 2. Principle of Raman Spectroscopy
- 3. Raman Spectroscopy for Polymer Characterization
- 4. Raman Spectroscopy for Polymeric Membrane Characterization
- 5. Conclusion
- List of Abbreviation

### Chapter 3. Electron Paramagnetic Resonance (EPR) Spectroscopy

- 1. Introduction
- 2. Fundamentals of EPR
- 3. EPR Applications for the Synthetic Polymeric Membranes
- 4. Other Examples of EPR Applications
- 5. Conclusions

### Chapter 4. Nuclear Magnetic Resonance (NMR) Spectroscopy

- 1. Introduction
- 2. Basics of NMR Spectroscopy
- 3. Prediction of Molecular Structure, Blend Miscibility, Phase Morphology of the Polymers
- 4. Determination of Pore Structure and Pore Radius of the Polymeric Membrane
- 5. Determination of Stability and Degradation of Polymeric Membranes
- 6. Conclusion
- List of Abbreviations
- List of Symbols

## Chapter 5. X-Ray Photoelectron Spectroscopy (XPS)

- 1. Introduction
- 2. Basics of XPS
- 3. Determination of Atomic Concentration in Polymer Membranes
- 4. Prediction of Crosslinking and Hydrophilicity of the Polymer Membranes
- 5. Conclusion

## Chapter 6. Small-Angle Scattering Techniques (SAXS/SANS)

- 1. Introduction
- 2. Analysis of Small-Angle Scattering Profile
- 3. Scattering Profile of Cross-Linked Polymer
- 4. Study of the TFC Membrane
- 5. Small-Angle Scattering From Dilute Polymer Solution or Colloidal Solution Systems
- 6. Probing Polymer–Nanoparticle Interaction in Dilute Solution
- 7. Structure of Polymer Nanocomposite Membrane
- 8. Understanding Form and Structure Factor in Rubbery Polydimethylsiloxane Membrane
- 9. Conclusions

## Part 2. Microscopy Methods for Membrane Characterization

### Chapter 7. Atomic Force Microscopy (AFM)

- 1. Introduction
- 2. AFM Imaging Modes
- 3. Interaction Force Measurements
- 4. Membrane Surface Imaging and Characterization
- 5. Fouling Characterization of Filtration Membranes Using AFM
- 6. Concluding Remarks

### Chapter 8. Transmission Electron Microscopy (TEM)

- 1. Introduction
- 2. Basics of TEM
- 3. Bright-Field and Dark-Field Images
- 4. Specimen Preparation
- 5. Characterization of Membrane Building Block
- 6. Membrane Characterization
- 7. Conclusion
- List of Abbreviations
- List of Symbols

## Chapter 9. Scanning Electron Microscopy (SEM) and Energy-Dispersive X-Ray (EDX) Spectroscopy

- 1. Introduction
- 2. Fundamentals of Electron Microscopy
- 3. Applications in Membrane Characterization
- 4. Conclusion

## Part 3. Physical and Chemical Characterization Methods for Membrane Characterization

### Chapter 10. Pore Size Measurements and Distribution for Ceramic Membranes

- 1. Introduction
- 2. Typical Method for Pore Size Measurements and Distribution
- 3. Comparisons Between Measurements
- 4. Conclusion
- Notation
- Greek Letters
- Subscripts

### Chapter 11. The Bubble Gas Transport Method

- 1. Introduction
- 2. Principle of Bubble Gas Transport Method
- 3. Experimental Setup and Procedure
- 4. Critical Aspects of Bubble Gas Transport Method
- 5. Conclusion
- Abbreviations and Symbols

### Chapter 12. Contact Angle Measurements

- 1. Introduction
- 2. Theoretical Background
- 3. Method of Contact Angle Measurement
- 4. Factors Affecting Contact Angle Measurements
- 5. Hydrophilicity/Hydrophobicity Analysis
- 6. The Membrane Characterization by Contact Angle
- 7. Conclusion
- List of Symbols

## Part 4. Mechanical Properties Characterization of Membranes

### Chapter 13. Mechanical Characterization of Membranes

- 1. Introduction
- 2. Mechanical Characterization Techniques

- 3. Mechanical Degradation of Polymeric Membranes
- 4. Stress-State of Polymeric Membrane Under Actual Condition
- 5. Advanced Techniques for Mechanical Properties Testing
- 6. Conclusions
- List of Abbreviations

## Part 5. Mass Transport, Modeling and Feed Solution Characterization

### Chapter 14. Gas and Vapor Transport in Membranes

- 1. Introduction
- 2. Gas and Vapor Transport in Membranes
- 3. Application
- 4. Conclusion
- List of Abbreviations
- List of Symbols

### Chapter 15. Mass Transport in Porous Liquid Phase Membranes

- 1. Introduction
- 2. Mass Transfer From the Bulk Feed to the Membrane Surface
- 3. Separation of Solutes at the Membrane Surface
- 4. Transport of Solutes Through the Membrane
- 5. Solute Transfer From the Membrane Interface to the Bulk Permeate
- 6. Liquid Phase Membrane Applications
- 7. Conclusions

### Chapter 16. The Use of Modeling for Characterization of Membranes

- 1. Introduction
- 2. Background Information
- 3. Simple Models for Basic Membrane Characterization
- 4. Advanced Models for Structural and Electrical Properties Characterization
- 5. Conclusions

### Chapter 17. Feed Solution Characterization

- 1. Introduction
- 2. Particle Size and Shape
- 3. Methods of Particle Size Measurement
- 4. Particle Charge and Zeta Potential
- 5. Viscosity
- 6. Conclusions

## Chapter 18. Electrokinetic Phenomena for Membrane Charge

- 1. Introduction
- 2. Electrophoresis
- 3. Electro-Osmosis
- 4. Sedimentation Potential
- 5. Streaming Potential
- 6. Conclusions
