

CONTENTS

Section 1: Fracture Mechanics and Fatigue

Numerical Green's function applied to fracture mechanics: 3-D implementation <i>G.S. Castor & J.C.F. Telles</i>	3
Developments in the use of the dual boundary element method for the fracture analysis of plate bending problems <i>S.Y. Ahmadi-Brooghani & J.L. Wearing</i>	13
Dynamic fracture mechanics with crack edges contact interaction <i>V. Zozulya & P. Rivera</i>	23
Dynamic dual boundary element analysis for 3-D fracture mechanics <i>M.H. Aliabadi, P.H. Wen & D.P. Rooke</i>	33
Failure analysis of gears using the boundary element method <i>R.E. Dippery, Jr. & J. Ellis</i>	43
Probability based computation of life expectancy of mechanical structures <i>H. Kebir, J.M. Roelandt & J. Foulquier</i>	51
Trends in the stochastic BEM <i>P. Brož</i>	61

Section 2: Inelastic Problems

Inelastic analysis without cell by improved multiple-reciprocity BEM <i>Y. Ochiai & T. Kobayashi</i>	73
Accurate evaluations of strongly singular domain integrals in non-linear BEM <i>X.W. Gao & T.G. Davies</i>	85
A fully regulated direct boundary formulation for three-dimensional elastoplastic problems <i>B. Burgardt & A. Le Van</i>	95

Homogenization of grain structure <i>P. Procházka & M. Válek</i>	105
---	-----

Section 3: Contact Mechanics

A comparison between non-conforming node-to-point and weak approaches in contact problem by BEM <i>F. París, A. Blázquez, J. Cañas & V. Mantic</i>	117
---	-----

Adaptive solution of rolling contact using boundary element method <i>Z.-L. Li & J.L. Kalker</i>	127
---	-----

A method to compute the effect of groups of frictional bolts <i>Y.-C. Wang, J. Li & D.-C. Zhang</i>	137
--	-----

BEM analysis of the contact problem in fibres debonded of a matrix. Effects of curing stresses. <i>F. París, J.C. del Caño & J. Varna</i>	145
--	-----

Section 4: Electromagnetics

Time domain boundary element analysis of resistively loaded wire <i>D. Poljak & V. Roje</i>	157
--	-----

The steady-state wave process in a piezoceramic medium with cavities (plane deformation) <i>M.L. Fil'shtinskii & K.A. Shaban</i>	167
---	-----

Section 5: Computational Techniques

Galerkin method in time domain BEM analysis <i>G. Yu, W.J. Mansur, J.A.M. Carrer & L. Gong</i>	179
---	-----

On time-dependent domain integral approximation using radial basis functions <i>M. Zerroukat & H. Power</i>	189
--	-----

Efficient domain calculation in direct boundary element method <i>L. Gaul, M. Wagner & W. Wenzel</i>	203
---	-----

The residual as an error estimator in the BEM <i>M.A. Golberg & H. Bowman</i>	215
--	-----

Constructing adaptive boundary elements for the Poisson-type nonlinear problem <i>S.Q. Xu & N. Kamiya</i>	227
An estimate of numerical errors by means of boundary integral equations <i>A. Nappi</i>	237
Regularizing transformation method for evaluation of singular and near-singular integrals <i>M. Kathirkamanayagam, J.H. Curran & S. Shah</i>	247
Parallel Laplace transform boundary element methods for diffusion problems <i>D. Crann, A.J. Davies & J. Mushtaq</i>	259
r-Adaptive boundary element method <i>E. Kita, K. Higuchi & N. Kamiya</i>	269
A new error indicator based on stresses for adaptive meshing with Hermite boundary elements <i>K.H. Muci-Küchler & J.C. Miranda-Valenzuela</i>	279
Panel clustering for 3-D elastostatics using spherical harmonics <i>K. Hayami & S.A. Sauter</i>	289
A BEM-formulation applied to the solution of nonlinear dynamic problems <i>H.J. Holl, A.K. Belyaev & H. Irschik</i>	299
A boundary-only BEM for linear and nonlinear problems <i>J.T. Katsikadelis & M.S. Nerantzaki</i>	309
Application of finite-dimensional perturbation technique to boundary integral equations <i>S.E. Mikhailov</i>	321
Theory and practice of superconvergence based a posteriori error estimation in a Galerkin boundary element method <i>J.H. Brandts</i>	333

Section 6: Inverse Problems

Green's functions in the numerical solution of some inverse boundary value problems <i>Yu. A. Melnikov & J.O. Powell</i>	351
---	-----

3-D impedance tomography of high contrast objects <i>H.N. Oğuz</i>	361
---	-----

An efficient inverse BEM algorithm to characterize space dependent thermal conductivity with an evolutionary-genetic approach <i>F. Rodriguez, E. Divo & A. Kassab</i>	371
---	-----

Section 7: Fluid Dynamics and Aerodynamics

Integral formulation of non-steady convective diffusion problem with high source term value <i>N. Samec & L. Škerget</i>	383
---	-----

An indirect boundary element method for slow viscous flow in a bounded region subject to surface tension forces <i>A.R.M. Primo, L.C. Wrobel & H. Power</i>	395
--	-----

Parallel indirect multipole BEM analysis of Stokes flow in a multiply connected domain <i>M.S. Ingber, A.A. Mammoli & J.S. Warsa</i>	407
---	-----

An asymptotic boundary element method for the 2D Stokes problem in the vorticity formulation <i>J. Salvi</i>	419
---	-----

Rayleigh-Benard convection of non-Newtonian fluid <i>N. Samec & L. Škerget</i>	429
---	-----

Leaky and confined aquifer flow analysis using 3D BEM <i>J.J. doRêgo Silva, J.J.S.P Cabral & M. Valença Virães</i>	441
---	-----

Unsteady free surface flow around hydrofoils <i>A. Iafrati & E.F. Campana</i>	451
--	-----

A comparison of different radial basis functions in DRBEM solution of the Navier-Stokes equations <i>B. Sarler & J. Perko</i>	461
--	-----

Emergence of nonlinear dynamics in 3D cavity mixing of Newtonian and viscoelastic (linear) fluids <i>R.E. Khayat</i>	471
---	-----

Estimation of physical unknowns in submerged breakwater using nonlinear least squares-boundary element method <i>M. Kanoh, H. Okuzono & T. Kuroki</i>	483
--	-----

Section 8: Acoustics

- The dual reciprocity method for Helmholtz-type operators
C.S. Chen & C.A. Brebbia 495
- A generalized Helmholtz equation fundamental solution using a
conformal mapping and dependent variable transformation 505
R.P. Shaw & G.D. Manolis
- Boundary element analysis of certain structural-acoustic
coupling problems and its application 511
M. Tanaka, T. Matsumoto & S. Oida
- Applications of a new composite BIE for 3-D acoustic
problems 521
S. Chen & Y. Liu
- Muffler analysis using the direct mixed-body boundary
and an efficient four-pole approach 531
T.W. Wu, C.Y.R. Cheng & C.I. Tseng
- Application of boundary element methods in modeling
multidimensional flame-acoustic interactions 541
T. Lieuwen & B.T. Zinn

Section 9: Corrosion

- Finite resistivity and shipboard corrosion prevention
system performance 555
V.G. DeGiorgi
- Boundary element model of electrochemical dissolution
with geometric non-linearities 565
B.M. Butler, A.J. Kassab, M.B. Chopra & V. Desai
- A general formulation based on the boundary element method
for the analysis of grounded installations in layered soils 575
I. Colominas, F. Navarrina, J. Aneiros & M. Casteleiro

Section 10: Elastodynamics

- Determination of 3D time domain responses in latered media
by using a coupled BE/FE process 587
F.C. de Araújo, W.J. Mansur & L.K. Nishikava

Modeling of turbo-generator rotors using BEM	597
<i>L. Chen, R. Subbiah, M. Chopra, A. Kassab & F. Moslehy</i>	

Boundary element dynamic non-linear stress analysis by mass matrix approach	607
<i>H.B. Coda & W.S. Venturini</i>	

The boundary element method applied to transient dynamic anisotropic problems	617
<i>E.L. Albuquerque & P. Sollero</i>	

Section 11: Thermal Problems

Transient conduction-radiation problems: dual reciprocity solution	627
<i>J. Blobner, R.A. Bialecki & G. Kuhn</i>	

Improvement of the frit salvage process for a cathode ray tube	637
<i>C.Y. Cha, S.V. Iyer, V. Lakshmanan, J.J. Rencis & J. Trevelyan</i>	

Extension of the dual reciprocity boundary element method to the problems of phase-change and thermal wave propagation	649
<i>W.-Q. Lu, Y. Zeng & J. Liu</i>	

Boundary integral formulation for non-linear heat conduction in anisotropic heterogeneous media	659
<i>E. Divo & A. Kassab</i>	

Boundary element analysis of conduction problems	669
<i>I. Ekmekçi, N. Sözbir & İ. Çalli</i>	

FVM/BEM approach for the solution of non-linear conjugate heat transfer problems	679
<i>R. Ye, A.J. Kassab & H. Li</i>	

Section 12: Geometrically Non-linear Problems

Solution of 2D, 3D and axisymmetric finite deformation problems by the boundary-domain integral method	691
<i>G. Kuhn & O. Köhler</i>	

On incremental equilibrium equations in solid mechanics	701
<i>D.W. Nicholson</i>
