

Contents

Section 1: Fluid flow

Towards a fast single domain – subdomain BEM algorithm for 3D incompressible fluid flow <i>J. Ravnik, L. Škerget & Z. Žunič</i>	3
Simulation of thin film flow around a cylinder on an inclined plane using the boundary element method <i>S. J. Baxter, H. Power, K. A. Cliffe & S. Hibberd</i>	13
Meshless and BE analysis of the flow and concentration around a DO-supplying machine <i>K. Sakamoto, M. Kanoh & T. Kuroki</i>	23
Boundary element method for micropolar fluid flow in a channel <i>M. Zadravec, M. Hriberšek & L. Škerget</i>	33
A multipole based Boundary Element Method for moving boundary problems in axisymmetric geometry <i>J. Singh, A. Glière & J.-L. Achard</i>	43

Section 2: Heat transfer

SHP solution of effect of elevated temperature on tunnel lining <i>P. Procházka & S. Peskova</i>	55
Natural convection in porous media under cross temperature and concentration gradients with Boundary Element Method <i>J. Kramer, R. Jecl & L. Škerget</i>	65

Section 3: Electrical engineering and electromagnetics

Analysis of log-periodic dipole arrays with boundary elements <i>D. Poljak, V. Doric, M. Birkic & D. Kosor</i>	75
Electromagnetic modelling of foetus and pregnant woman exposed to extremely low frequency electromagnetic fields <i>C. Gonzalez, A. Peratta & D. Poljak</i>	85
Trefftz analysis for temperature rise on human skin exposed to electromagnetic waves <i>Y. Hirayama & E. Kita</i>	95
Modelling of protective potential distribution in a cathodic protection system using a coupled BEM/FEM method <i>A. Muharemović, H. Zildžo & E. Letić</i>	105
Boundary element model of the human head exposed to an electrostatic field generated by Video Display Units <i>D. Čavka, D. Poljak, A. Peratta & C. Brebbia</i>	115

Section 4: Damage mechanics and fracture

Interfacial debonding and damage progression in particle-reinforced composites <i>S. Womack & M. S. Ingber</i>	127
Trefftz-type approach for 2D fracture problems <i>A. N. Galybin</i>	137
Integral transform approach for dynamic fracture calculation and crack growth modelling <i>P. Brož</i>	147

Section 5: Mesh reduction techniques

Desingularised method of double layer fundamental solutions for potential flow problems <i>B. Šarler</i>	159
On the use of integrated RBFs in Galerkin approximation for elliptic problems <i>N. Mai-Duy & T. Tran-Cong</i>	169

Boundary element dual reciprocity method with overlapping sub-domains <i>B. Thanh Tu & V. Popov</i>	179
--	-----

Section 6: Advanced computational techniques

Comparison of two solvers for the extended method of fundamental solutions <i>R. Gospavic, N. Haque, V. Popov & C. S. Chen</i>	191
Iterative 3D BEM solver on complex faults geometry using angular dislocation approach in heterogeneous, isotropic elastic whole or half-space <i>F. Maerten & L. Maerten</i>	201
Adaptive cross approximation based solver for boundary element method with single domain in 3D <i>T. Grytsenko & A. Peratta</i>	209
Regularization of the hypersingular integrals in 3-D problems of fracture mechanics <i>V. V. Zozulya</i>	219
Efficient elasto-plastic analysis via an adaptive finite element-boundary element coupling method <i>W. Elleithy & U. Langer</i>	229
3D multi-spectral image-guided Near-Infrared spectroscopy using the boundary element method <i>S. Srinivasan, B. W. Pogue & K. D. Paulsen</i>	239
Parametric analysis of ACA-based solver for BEM 3D <i>T. Grytsenko & A. Peratta</i>	249
