

Contents

Section 1: Natural and forced convection

Numerical investigation of transient single phase forced convection of nanofluids in circular tubes <i>V. Bianco, O. Manca & S. Nardini</i>	3
Numerical investigation of natural convection of air in vertical divergent channels <i>O. Manca, S. Nardini, D. Ricci & S. Tamburrino</i>	13

Section 2: Heat exchangers

Numerical simulation of fluid flow in a monolithic exchanger related to high temperature and high pressure operating conditions <i>F. Selimovic & B. Sundén</i>	25
Scalar characteristics of a lean premixed turbulent V-shape flame (air-butane) <i>M. S. Boulahlib, S. Boukebbab, I. Amara & E. Ferkous</i>	37
Numerical simulation of incompressible laminar fluid flow in tubes with wire coil inserts <i>D. Muñoz-Esparza, J. Pérez-García, E. Sanmiguel-Rojas, A. García-Pinar & J. P. Solano-Fernández</i>	47

Section 3: Advances in computational methods

LBM mesoscale modelling of porous media <i>A. C. M. Sousa & A. Nabovati</i>	59
--	----

Chemical reacting transport phenomena and multiscale models for SOFCs <i>M. Andersson, J. Yuan & B. Sundén</i>	69
Heat transfer between shell and rigid body through the thin heat-conducting layer taking into account mechanical contact <i>V. V. Zozulya</i>	81

Section 4: Heat recovery

An experimental feasibility study of using diesel exhaust for space heating in Alaskan Villages <i>P. Raghupatruni, C.-S. Lin, D. Witmer, E. Bargar, J. Schmid, T. Johnson & V. Avadhanula</i>	93
Heat recovery with low temperature spray drying for thermochemical hydrogen production <i>V. N. Daggupati, G. F. Naterer & K. S. Gabriel</i>	105

Section 5: Heat transfer

Peculiarities of heat transfer from in-line tube bundles to upward aqueous foam flow <i>J. Gylis, S. Sinkunas, B. Sundén, I. Gabrielaitiene & T. Zdankus</i>	117
Heat transfer in reactive Co/Al nanolaminates <i>M. L. Hobbs, D. P. Adams & J. P. McDonald</i>	127
Heat transfer and pressure drop experimentation inside single minichannels <i>A. Cavallini, S. Bortolin, D. Del Col, M. Matkovic & L. Rossetto</i>	137

Section 6: Modelling and experiments

Advances in gas turbine blade cooling technology <i>R. S. Amano</i>	149
Thermal investigation of light emitting diodes <i>K. Domke & K. Wandachowicz</i>	159
Nucleate boiling flow – experimental investigations and wall heat flux modelling for automotive engine applications <i>H. Steiner, B. Breitschädel, G. Brenn, H. Petutschnig & C. Samhaber</i>	169

Air curtains of open refrigerated display cases revisited: a new technique for infiltration rate measurements <i>M. Amin, H. K. Navaz, D. Dabiri & R. Faramarzi</i>	179
Performance testing of reflective insulation applied in a prototype experimental chamber in Greece: experimental results for summer and winter periods <i>M. Gr. Vrachopoulos, D. G. Stavlas, L. D. Kravvaritis, M. K. Koukou, N. W. Vlachakis, N. G. Orfanoudakis, S. A. Mavromatis & A. G. Gonidis</i>	191
A measuring method based on photodiodes for the diagnostic of optimal combustion conditions <i>L. Arias, O. Farías, S. Torres & D. Sbárbaro</i>	201
Author Index	211
