PART ONE

INTRODUCTION

1. Introduction	3
Scope	3
Historical	4
Terminology	5
Factors affecting the interpretation of experimental data	5
Water movement along the soil-plant-atmosphere pathway	6
Conditions affecting the response of plants to soil moisture status	7
Soil factors	8
Plant factors	8
Weather factors	9
Miscellaneous factors	10
Measurement of plant responses	11

PART TWO

CROPS GROWN AS ANNUALS OR BIENNIALS

2 Cereals	15
Introduction	15
Developmental stages	15
Wheat	17
Effects of irrigation	17
Effects of soil drought	22
Effects of atmospheric drought	26
Effects of rainfall	28
Studies on water loss	28
Conclusions	29
Maize	29
Effects of irrigation	29
Effects of soil drought	30
Effects of rainfall	32
Studies on water loss	32
Conclusions	32
Barley	32
Effects of irrigation	32
Effects of soil drought	33
Effects of atmospheric drought	35
Effects of excess water	35
Conclusions	35
Oats	35
Effects of rainfall	36
Effects of irrigation	37
Effects of soil drought	38
Effects of atmospheric drought	39
Conclusions	39
Rye	39
Millet	40
Sorghum	41
Rice	42
Discussion on the cereals	44
Summary	48

	<i>Page</i>
3. Annual leguminous crops	49
Peas	49
Soyabeans	51
Broad and field beans	53
French or snap beans	53
Runner beans	57
Lima beans	57
Groundnuts	58
Discussion on the annual legumes	59
4. Annual fruit crops	61
Tomatoes	61
Field tomatoes	61
Glasshouse tomatoes	62
Conclusions	63
Peppers or capsicums	63
Cucumbers and gherkins	64
Watermelons	65
Discussion on the annual fruit crops	65
5. Annual leaf crops	66
Lettuce	66
Field lettuce	66
Glasshouse lettuce	67
Conclusions	68
Tobacco	68
Discussion on the annual leaf crops	70
6. Miscellaneous seed, flower and fibre crops	72
Cotton	72
Effects of soil moisture conditions on yield	72
Effects of soil moisture conditions on boll shedding	75
Effects of soil moisture conditions on lint quality	76
Conclusions	77
Buckwheat	78
Flax and linseed	78
Safflower	80
Sunflowers	80
Opium poppies	80
Snapdragons	81
<i>Geophila renaris</i>	81
7. Biennial field and vegetable crops	82
Sugar and fodder beet	82
Garden or red beet	84
Carrots	85
Turnips	86
Kohl-rabi	87
Cabbage and kale	87
Cauliflower and broccoli	89
Discussion on the biennial crops	91
8. Tuber, bulb and corm crops	93
Potatoes	93
Maincrop potatoes	93
Early potatoes	96
Effects of irrigation at different stages on the quality of potato tubers	97
Conclusions	97
Onions	97
Tulips	98
Gladioli	98
Discussion on the tuber, bulb and corm crops	99

PART THREE

PERENNIAL CROPS

9. Introductory note	103
-----------------------------	-----

	<i>Page</i>
10. Fruit and other tree and bush crops—vegetative growth	105
Deciduous fruit and temperate forest trees	105
Shoot growth	105
Secondary growth	107
Trunk growth	108
Evergreen tropical and sub-tropical trees	109
Avocados	109
Citrus	109
Cocoa	109
Coffee	110
Guayule	111
Mangoes	112
Olives	113
Tea	113
Conclusions on evergreens	114
11. Fruit and other tree and bush crops—root growth	115
Deciduous fruit and temperate forest trees	115
Evergreen tropical and sub-tropical trees	117
Citrus	117
Coffee	118
Mangoes	118
Conclusions on evergreens	118
12. Fruit and other tree and bush crops—flower-bud formation and development	119
Deciduous fruit and temperate forest trees	119
Flower-bud formation	119
Flower development	124
Evergreen tropical and sub-tropical trees	125
Citrus	125
Cocoa	126
Coffee	126
Flower-bud formation	126
Flower development	128
Guayule	129
Mangoes	130
Olives	131
13. Fruit and other tree and bush crops—fruit set and development	132
Deciduous fruits	132
Fruit set and drop	132
Fruit development	134
Evergreen tropical and sub-tropical trees	137
Avocados	137
Citrus	138
Cocoa	140
Coffee	141
Mangoes	141
Olives	142
14. Fruit and other tree and bush crops—fruit yield	143
Deciduous fruits	143
Evergreen tropical and sub-tropical trees	143
Citrus	143
Cocoa	143
Coffee	144
Olives	145
15. Fruit and other tree and bush crops—fruit quality and composition	147
Deciduous fruits	147
Evergreen tropical and sub-tropical trees	148
16. Fruit and other tree and bush crops—disorders and diseases	150
Deciduous fruit and temperate forest trees	150
Disorders	150
Diseases	151
Evergreen tropical and sub-tropical trees	152

	<i>Page</i>
17. Semi-woody and herbaceous perennials	153
Dicotyledonous plants	153
Strawberries	153
Cane fruits	156
Hops	157
Legumes	158
Vegetative growth	158
Seed production	160
Monocotyledonous plants	161
Sugar cane	161
Grasses	166
Bananas	169
Pineapples	172
Sisal	174
18. Palm trees	175
Introduction	175
Oil palms and coconuts	176
Dates	177
Conclusions on palms	179
19. Conclusions from work on perennial crops	180
Vegetative growth	180
Root growth	182
Flower-bud formation	183
Fruit set and development	185
Fruit quality	186
Disorders and diseases	186

PART FOUR

DISCUSSION

20. Discussion	191
General considerations	191
Hypotheses	194
Direct relationships—(a) beneficial effects of high moisture supply at certain growth stages	195
Developmental effects	195
Changes in internal water relations of plants during ontogeny	195
Root growth and availability of water	196
Availability of nutrients	196
Direct relationships—(b) beneficial effects of low moisture supply at certain growth stages	197
Developmental effects	197
Drought hardening effects	197
Alterations in the chemical composition of plants	198
Coincidental and chance relationships	198
Seasonal trends in evaporation rates	198
Exhaustion of water reserves in root-occupied soil	199
Reaction to the ending of drought	200
Physiological and agronomic implications	201
Appendix—Problems meriting consideration in future research programmes ...	203
Bibliography	205
