

# CONTENTS

|   |          |
|---|----------|
| <b>1 TERMINOLOGY</b>                      | <b>1</b> |
| References                                | 4        |
| <b>2 DROUGHT STRESS</b>                   | <b>5</b> |
| Basic Water Relations Concepts            | 5        |
| Effects of Drought on Growth and Yield    | 11       |
| Effects on Ultrastructure                 | 15       |
| Effects of Water Stress on Photosynthesis | 16       |
| Nitrogen Metabolism under Water Stress    | 20       |
| Water Logging and Anaerobiosis            | 21       |
| Discussion Questions                      | 22       |
| References                                | 23       |

|  |           |
|--|-----------|
| <b>3 DROUGHT RESISTANCE</b>                          | <b>27</b> |
| Osmotic Adjustment                                   | 27        |
| Cell Elasticity                                      | 33        |
| Drought Escape                                       | 34        |
| Drought Tolerance                                    | 35        |
| Measurement of Drought Stress                        | 37        |
| Breeding for Drought Stress Resistance               | 39        |
| Discussion Questions                                 | 41        |
| References   | 42        |
| <b>4 TEMPERATURE STRESS</b>                          | <b>45</b> |
| Chilling Injury                                      | 46        |
| Effects on Membranes                                 | 47        |
| The Freezing Process                                 | 47        |
| Freezing Injury to Membranes                         | 49        |
| Effects of Freeze-Thaw Cycles on Plasma<br>Membranes | 50        |
| Tolerance of Freezing Stress                         | 52        |
| Frost Resistance and Cold Hardiness                  | 54        |
| Effect of Temperature on Root Processes              | 55        |
| Breeding for Temperature Tolerance                   | 57        |
| Effects of High Temperature                          | 58        |
| Temperature Acclimation                              | 60        |
| Acclimation of Photosynthesis                        | 61        |
| High-Temperature Acclimation                         | 63        |
| Acclimation to Low Temperature                       | 64        |
| Factors Affecting Cold Hardening                     | 65        |
| Discussion Questions                                 | 66        |
| References   | 67        |
| <b>5 NUTRIENT STRESS</b>                             | <b>71</b> |
| Conditions Causing Nutrient Stress                   | 72        |

|  |         |
|--|---------|
| Deficiency Causes and Symptoms                 | 75      |
| Deficiency and Toxicity Causes and Effects     | 77      |
| <i>Copper</i> , 77                             |         |
| <i>Manganese</i> , 78                          |         |
| <i>Iron</i> , 78                               |         |
| Plant Analysis as a Diagnostic Tool            | 79      |
| Nutrient and Metal Toxicity                    | 83      |
| Aluminum Toxicity                              | 84      |
| Manganese Toxicity                             | 85      |
| Copper Toxicity                                | 86      |
| Mycorrhizae as a Factor in Stress Alleviation  | 87      |
| Chelation as a Mechanism of Tolerance          | 87      |
| Genetics of Mineral Element Stress Tolerance   | 88      |
| Discussion Questions                           | 89      |
| References                                     | 90      |
